Preface' xiii

## Part I Introduction and Fundamentals

### Chapter 1

Introduction 3

1.1 What Is an Economic Model? 3

1.2 How to Use This Book 8

1.3 Conclusion 9

### Chapter 2

Review of Fundamentals 11

2.1 Sets and Subsets 11

2.2 Numbers 23

2.3 Some Properties of Point Sets in  $W$  31

2.4 Functions 41

### Chapter 3

Sequences, Series, and Limits 61

3.1 Definition of a Sequence 61

3.2 Limit of a Sequence 65

3.3 Present-Value Calculations 69

3.4 Properties of Sequences 79

3.5 Series 84

## Part II Univariate Calculus and Optimization

### Chapter 4

Continuity of Functions 103

4.1 Continuity of a Function of One Variable 103

4.2 Economic Applications of Continuous and Discontinuous Functions 113

Chapter 5  
 The Derivative and Differential for Functions of One Variable **127**

5.1 Definition of a Tangent Line 127

5.2 Definition of the Derivative and the Differential 134

5.3 Conditions for Differentiability 141

5.4 Rules of Differentiation 147

5.5 Higher Order Derivatives: Concavity and Convexity of a Function 175

5.6 Taylor Series Formula and the Mean-Value Theorem 185

Chapter 6  
 Optimization of Functions of One Variable **195**

6.1 Necessary Conditions for Unconstrained Maxima and Minima 196

6.2 Second-Order Conditions 211

6.3 Optimization over an Interval 220

**Part III Linear Algebra**

Chapter 7  
 Systems of Linear Equations **235**

7.1 Solving Systems of Linear Equations 236

7.2 Linear Systems in  $n$ -Variables 250

Chapter 8  
 Matrices 267

8.1 General Notation 267

8.2 Basic Matrix Operations 273

8.3 Matrix Transposition 288

8.4 Some Special Matrices 293

Chapter 9  
 Determinants and the Inverse Matrix 301

9.1 Defining the Inverse 301

9.2 Obtaining the Determinant and Inverse of a  $3 \times 3$  Matrix 318

9.3 The Inverse of an  $n \times n$  Matrix and Its Properties 324

9.4 Cramer's Rule 329

Chapter 10  
 Some Advanced Topics in Linear Algebra 347

10.1 Vector Spaces 347

10.2 The Eigenvalue Problem 363

10.3 Quadratic Forms 378

**Part IV Multivariate Calculus**

## Chapter 11

Calculus for Functions of n-Variables **393**

- 11.1 Partial Differentiation 393
- 11.2 Second-Order Partial Derivatives 407
- 11.3 The First-Order Total Differential 415
- 11.4 Curvature Properties: Concavity and Convexity 436
- 11.5 More Properties of Functions with Economic Applications 451
- 11.6 Taylor Series Expansion\* 464

## Chapter 12

Optimization of Functions of n-Variables **473**

- 12.1 First-Order Conditions 474
- 12.2 Second-Order Conditions 484
- 12.3 Direct Restrictions on Variables 491

## Chapter 13

Constrained Optimization **503**

- 13.1 Constrained Problems and Approaches to Solutions 504
- 13.2 Second-Order Conditions for Constrained Optimization 516
- 13.3 Existence, Uniqueness, and Characterization of Solutions 520

## Chapter 14

Comparative Statics **529**

- 14.1 Introduction to Comparative Statics 529
- 14.2 General Comparative-Statics Analysis 540
- 14.3 The Envelope Theorem 554

## Chapter 15

Concave Programming and the Kuhn-Tucker Conditions **567**

- 15.1 The Concave-Programming Problem 567
- 15.2 Many Variables and Constraints 575

**PartV Integration and Dynamic Methods**

## Chapter 16

Integration **585**

- 16.1 The Indefinite Integral 585
- 16.2 The Riemann (Definite) Integral 593
- 16.3 Properties of Integrals 605

16.4	Improper Integrals	613
16.5	Techniques of Integration	623
Chapter 17		
An Introduction to Mathematics for Economic Dynamics.		633
17.1	Modeling Time	634
Chapter 18		
Linear, First-Order Difference Equations		643
18.1	Linear, First-Order, Autonomous Difference Equations	643
18.2	The General, Linear, First-Order Difference Equation	656
Chapter 19		
Nonlinear, First-Order Difference Equations		665
19.1	The Phase Diagram and Qualitative Analysis	665
19.2	Cycles and Chaos	673
Chapter 20		
Linear, Second-Order Difference Equations		681
20.1	The Linear, Autonomous, Second-Order Difference Equation	681
20.2	The Linear, Second-Order Difference Equation with a Variable Term	708
Chapter 21		
Linear, First-Order Differential Equations		715
21.1	Autonomous Equations	715
21.2	Nonautonomous Equations	731
Chapter 22		
Nonlinear, First-Order Differential Equations		739
22.1	Autonomous Equations and Qualitative Analysis	739
22.2	Two Special Forms of Nonlinear, First-Order Differential Equations	748
Chapter 23		
Linear, Second-Order Differential Equations		753
23.1	The Linear, Autonomous, Second-Order Differential Equation	753
23.2	The Linear, Second-Order Differential Equation with a Variable Term	772
Chapter 24		
Simultaneous Systems of Differential and Difference Equations		781
24.1	Linear Differential Equation Systems	781
24.2	Stability Analysis and Linear Phase Diagrams	803
24.3	Systems of Linear Difference Equations	825

Chapter 25	
Optimal Control Theory	845
25.1 The Maximum Principle	848
25.2 Optimization Problems Involving Discounting	860
25.3 Alternative Boundary Conditions on $x(T)$	872
25.4 Infinite-Time Horizon Problems	886
25.5 Constraints on the Control Variable	899
25.6 Free-Terminal-Time Problems ( $T$ Free)	909
Answers	921
Index	953
