

Model Building in Economics

Its Purposes and Limitations

LAWRENCE A. BOLAND

Simon Fraser University, Canada

UNIVERSITY PRESS

Contents

<i>Preface</i>	page xi
<i>Acknowledgements</i>	xix
Prologue: Model building yesterday versus today	1
1 Representative models of yesterday	2
2 Theoretical versus empirical models today	5
3 Models as instruments	8
4 Outline of book	14
PART I THEORETICAL MODELS	
1 Microeconomic versus macroeconomic theoretical model building	19
1.1 The nature of theoretical microeconomic models: the necessary ingredients	21
1.2 The nature of theoretical macroeconomic models	26
1.3 The static-versus-dynamic basis for distinguishing micro from macro	38
1.4 The purposes of building a theoretical macro model versus a micro model	44
2 On the limitations of equilibrium models in general	46
2.1 Time in economic models or economic models <i>in time</i> ?	47
2.2 Equilibrium versus balance	48
2.3 Consistent and complete explanations	50
2.4 Existence versus uniqueness	52
2.5 Equilibrium stability analysis	54
2.6 Money and time in equilibrium models	54
2.7 Expectations and knowledge in equilibrium models	56

Contents

2.8	Equilibrium models in macroeconomics and the alleged need for micro-foundations	59
2.9	Less demanding concepts of equilibrium: self-confirming and stochastic	61
2.10	Limits to the usefulness of equilibrium models in general	63
	On building theoretical models using game theory	67
3.1	Game-theoretic economic models: a brief elementary review	69
3.2	Using game-theoretic economic models	70
3.3	The necessary ingredients for game-theoretic economic models	72
3.4	Dealing with questionable equilibrium solutions	74
3.5	What do game-theoretic models represent?	75
	On the purpose and limitations of game-theoretic models	78
4.1	Dealing with the knowledge of game players	79
4.2	Are game-theoretic models as limited as critics claim?	92
 PART II EMPIRICAL MODELS 		
	Microeconomic versus macroeconomic empirical model building	97
5.1	Empirical microeconomic model building	98
5.2	Empirical macroeconomic model building	100
	On building macro-econometric models	105
6.1	The first two forks in the road for building macro-econometric models	106
6.2	General-equilibrium models as micro-foundations	108
6.3	Dynamic Stochastic General Equilibrium (DSGE) models	110
6.4	Limits and criticism of the DSGE approach to empirical modeling	116
6.5	The CVAR alternative to the DSGE approach to empirical modeling	117
6.6	Beyond DSGE models	119
	Modeling and forecasting	123
7.1	The elements of model building in general	125
7.2	Using models to make predictions	133
7.3	Models as the basis for business forecasts	136
7.4	The requirements for structural dynamic forecasting models	137
7.5	The rocky history of econometrics-based forecasting	139
7.6	Is it possible to overcome the methodological obstacles?	143

PART III TESTING AND MODELS

8	On the role and limitations of experimental and behavioural economics	149
8.1	Experimental economic model building	150
8.2	The logical problems facing experimentalist model building	153
8.3	Avoiding the Duhem-Quine logical problem	154
8.4	Using experimental models	155
8.5	Laboratory-based experimental macroeconomic models	159
8.6	Models and behavioural economics	162
8.7	Models and evolutionary economics	166
9	The logical adequacy of convincing tests of models using empirical data	171
9.1	Testing versus mere testability of modern economics	174
9.2	The basic logic of model building for the purpose of testing economic hypotheses	176
9.3	Overcoming the ambiguity of direct model refutation	180
9.4	Stochasticism and econometric models	188
9.5	Asymmetries in tests based on stochastic models	191
10	The statistical adequacy of convincing tests of models using empirical data	203
10.1	The purpose of testing with 'robust' statistical estimation	204
10.2	Statistical adequacy of non-experimental data	207
10.3	Data mining and pre-test bias?	213
10.4	Putting things together	217

PART IV METHODOLOGICAL CONSIDERATIONS

11	Model building from a philosophy of science perspective	221
11.1	Types of model recognized by philosophers of economics	223
11.2	Philosophy of science's only relevance to economic model builders	225
11.3	Black boxes versus transparent boxes	230
12	Choosing model-building methods	232
12.1	Sociological implications of a choice of modeling methods	233
12.2	Historical implications of a choice of modeling methods	236
12.3	Methodological implications of a choice of modeling methods	238
12.4	Concluding remarks for honest model builders in economics	240

Epilogue: Against putting ideology ahead of realism	241
1 Remembering the 1960s, 1970s, and 1980s	242
2 It is all about assumptions	243
3 Elementary logic and realism	243
4 Friedman and instrumentalism	245
5 Mathematical modeling: when the left hand does not know what the right hand is doing	247
6 The institutionalization of the mathematician's culture	248
7 The textbook theory of the firm versus the ideology of the market economy	250
8 Concluding remarks	251
<i>Bibliography</i>	253
<i>Name index</i>	269
<i>Subject index</i>	273
