

Portfolio Analysis

A book of readings

Edited by
DR. JOHN P. DICKINSON

*University of Lancaster,
Lancaster, England.*

Contents

Editor's Note	ix
SECTION 1 ORIGINS AND DEVELOPMENT	
Portfolio Theory: an Overview <i>John P. Dickinson</i>	5
SECTION 2 STATISTICAL ASPECTS OF PORTFOLIO ANALYSIS	
The Distribution and Independence of Successive Rates of Return from the British Equity Market <i>Richard A. Brealey</i>	21
An Examination of the Robustness of Estimation Procedures <i>John P. Dickinson</i>	43
SECTION 3 THE MEAN-VARIANCE CRITERION: SOME MODIFICATIONS	
Entropy, Market Risk, and the Selection of Efficient Portfolios <i>George C. Philippatos and Charles J. Wilson</i>	59
Portfolio Selection and Investors' Utility: a Graphical Analysis <i>Haim Levy and Marshall Sarnat</i>	75
An E-S _h Model of Capital Budgeting <i>James C. T. Mao and John F. Brewster</i>	85
SECTION 4 PORTFOLIO SELECTION AND PERFORMANCE	
Modular Portfolio Selection: an Introduction <i>Chris B. Chapman</i>	105
The Notional Rate Method of Solving Portfolio Analysis Problems when Short Sales are Permitted <i>Michael J. Barron</i>	131
Measurement of Portfolio Performance under Uncertainty <i>Irwin Friend and Marshall Blume</i>	153

SECTION 5 PORTFOLIO THEORY AND CAPITAL BUDGETING

The Portfolio Analysis of Multiperiod Capital Investment under Conditions of Risk <i>Haim Levy and Marshall Sarnat</i>	1 g 1
On Intra-Firm Resource Allocation under Risk <i>Manak C. Gupta</i>	199
Portfolio Adjustments and Capital Budgeting Criteria <i>Michael Jones-Lee</i>	213
Bibliography	227
List of figures	
1.1 Opportunity set of all possible portfolios	10
1.2 Skewed distributions of returns	12
2.1 Distribution daily market returns, 1962—68	25
3.1 Mean-variance and mean-entropy frontiers	66
3.2 Single-index and mean-entropy frontiers	68
3.3 Cumulative probability distributions of returns for wheels <i>F</i> and <i>G</i>	76
3.4 Cumulative probability distributions of returns for prospects <i>F</i> and <i>G</i>	78
3.5 Cumulative difference between two prospects <i>F</i> and <i>G</i>	79
3.6 Cumulative probability distributions for <i>A</i> , <i>B</i> , <i>C</i>	81
3.7 Hypothetical probability distributions	87
3.8 Hypothetical probability distributions	88
3.9 The value of E , V , S_h for eighteen portfolios	95
4.1 Example decision root	110
4.2 $S^*(k)$ locus diagram	111
4.3 $S^*(k)$ locus diagram, solution indicated	113

4.4	An example Re versus X curve	119
4.5	An example Y^* versus the associated value of D^* curve	120
4.6	Example Y^* versus the associated value of D^* curves	122
4.7	Market opportunity lines for A, B, C	132
4.8	Loci of 0, a) efficient portfolios	134
4.9	Illustration of 'notional rates' associated with efficient portfolios	137
4.10	Efficient frontiers produced by different models	149
4.11	Scatter diagram of Jensen's performance measure (using log relatives) on risk, January 1960—June 1968	161
4.12	Scatter diagram of Jensen's performance measure (using log relatives) on risk, January 1960—March 1964	166
4.13	Scatter diagram of Jensen's performance measure (using log relatives) on risk, April 1964-June 1968	167
5.1	Combinations of projects facing firm	183
5.2	Attainable portfolios in securities market	185

list of tables

2.1	Comparison of frequency distribution with unit normal	24
2.2	Dispersion and central tendency of changes on given days of Account	26
2.3	Comparison of frequency distributions with unit normal — selected years	28
2.4	Effect on frequency distribution of longer differencing intervals	29
2.5	Fall in price as percentage of gross dividend	32
2.6	Serial correlation coefficient for signed changes in index	33
2.7	Contingency tables of signed changes in index	34
2.8	Runs of daily changes in index above or below median	35
2.9	Expected and actual distribution of runs by length, given actual total number of positive and negative runs	36

2.10	Average performance of market during periods of good and bad trade figures	37
3.1	Hypothetical securities and return-state probabilities	63
3.2	Summary statistics for twenty-four mean-entropy and Markowitz full-covariance portfolios	65
3.3	Summary statistics for forty-seven mean-entropy and Sharpe single-index efficient portfolios	67
3.4	Cumulative area under F and G of Fig. 3.5	79
3.5	Computation of E and S_h for Portfolio (x_1, x_2, \dots, x_n)	91
3.6	Investment projects and their expected NPVs	93
3.7	Variance-covariance matrix of investment projects	94
3.8	The values of E , V , and S_h for eighteen feasible portfolios	96
4.1	Mean and standard deviation of return for twenty-four groups of the Financial Times Actuaries Index	144
4.2	Correlation coefficients of rates of return for each pair of groups and also of each group with the index	145
4.3	Details of some of the frontier portfolios	147
4.4	Summary of the regression equations used to estimate the variance-covariance matrix in Sharpe's model	148
4.5	Regressions of one-parameter performance measures on risk. Random portfolios, January 1960—June 1968	159
4.6	Regressions of one-parameter performance measures on risk. Random portfolios, January 1960—March 1964	164
4.7	Regressions of one-parameter performance measures on risk. Random portfolios, April 1964-June 1968	165
5.1	Data on two two-year projects	189
5.2	Data on a one-year project and a two-year project	190
5.3	Data on projects with interdependent cash flows	191
