Contents

List of Contributors *vii*
Acknowledgements *xi*
Preface *xii*

1. Introduction and overview 1
Carlos de Miguel, Xavier Labandeira and Baltasar Manzano

PART I SOME FUNDAMENTALS

2. Growth and environment: on U-curves without U-turns 9
Sjak Smulders

3. Pollution markets: some theory and evidence 24
Juan P. Montero

PART II THE EU EMISSION TRADING SYSTEM

4. European greenhouse gas emissions trading: A system in transition 45
John Reilly and Sergey Paltsev

5. Harmonizing emission allocation.What are the equity consequences for the sectors in and outside the EU-trading scheme 65
Tim Hoffmann, Andreas Loschel and Ulf Moslener

6. The effects of a sudden CO_2 reduction in Spain 79
Xavier Labandeira and Miguel Rodriguez

7. An assessment of the consequences of the European emissions trading scheme for the promotion of renewable electricity in Spain 93
Pedro Linares, Francisco J. Santos and Mariano Ventosa

8. Efficient verification of firm data under the EU emissions trading system 109
Frauke Eckermann

PART III ADVANCED ISSUES IN CLIMATE CHANGE AND ENERGY POLICIES

9. Induced technological change and slow energy capital stock turnover in an optimal CO_2 abatement model 129
Malte Schwoon and Richard S.J. Tol

10. Indeterminacy and optimal environmental public policies in an endogenous growth model 147
Rafaela Perez and Jesus Ruiz

11. Energy-saving technological progress in a vintage capital model 166
Agustin Perez-Barahona and Benteng Zou

12. Oil shocks and the business cycle in Europe 180
Carlos de Miguel, Baltasar Manzano and Jose M. Martin-Moreno

13. Energy transitions and policy design in a GPT setting with cyclical growth through basic and applied R&D 196
Adriaan van Zon and Tobias Kronenberg
