1	AN INTRODUCTION TO INTEREST AND CREDIT RISKY INSTRUMENTS AND THEIR MARKETS	1
1.1	Bond conventions	1
1.1.1	Interest and credit risk	4
1.2	Bond markets	5
1.3	Trends in the global capital markets	8
1.4	Corporate bonds	9
1.4.1	Default risk	9
1.4.2	Bond covenants	12
1.4.3	Adverse selection	14
1.5	Scope of this book	15
1.6	Exercises	17
2	THE SOVEREIGN TERM STRUCTURE AND THE RISK STRUCTURE OF INTEREST RATES	18
2.1	Objectives pricing and hedging	18
2.1.1	Imperfections in perfect hedge ratios	20
2.2	Introduction to the term and risk structure of interest rates	21
2.3	The uses of the term structure and risk structure of interest rates	22
2.3.1	Which yield curve?	24
2.4	Theories of the sovereign term structure of interest rates	25
2.4.1	The expectations hypothesis	26
2.4.2	The liquidity and preferred habitat hypotheses	29
2.4.3	The Fisher effect	31
2.4.4	Cox Ingersoll and Ross (1981)	32
2.4.5	Information in the sovereign term structure of interest rates	33

2.5	Theory of the risk structure of interest rates	34
2.5.1	The relationship between changes in the sovereign term structure and the credit spread	36
2.6	How sovereign bonds are issued	36
2.6.1	American auction	37
2.6.2	Dutch auction	38
2.6.3	Variations	39
2.7	Repos	41
2.8	Summary	42
2.9	Exercises	43
3	MEASURING THE EXISTING SOVEREIGN TERM STRUCTURE AND THE RISK STRUCTURE OF INTEREST RATES	46
3.1	Measuring the sovereign term structure of interest rates	46
3.2	Frequently traded bonds	47
3.2.1	Other data problems	50
3.2.2	Estimating corporate yield curves	51
3.3	Zero coupon yields	52
3.3.1	Zero coupon yields and coupon bias	53
3.3.2	Bootstrapping	55
3.3.3	STRIPS are not the answer	59
3.4	Measuring continuous yield curves	60
3.4.1	Natural splines	60
3.4.2	The problem with splines	64
3.4.3	Parsimonious yield curve estimates	66
3.4.4	Which yield curve fitting technique is best?	70
3.5	Par coupon yield curves	70
3.6	Summary	71
3.7	Exercises	72
4	MODELLING THE SOVEREIGN TERM STRUCTURE OF INTEREST RATES: THE BINOMIAL APPROACH	74
4.1	The binomial approach	74
4.2	The simple model	75
4.3	Which short rate of interest should we model?	78
4.4	Pricing a bond using the interest rate tree	79
4.5	The problems with the simple model	83
4.6	Incorporating risk aversion	85
4.7	Exercises	90

5	INTEREST RATE MODELLING: THE TERM STRUCTURE CONSISTENT APPROACH	92
5.1	Desirable features of an interest rate model	92
5.2	Ho and Lee (1986)	93
5.2.1	State prices	94
5.2.2	Calibration	100
5.2.3	Implementing Ho and Lee	102
5.2.4	Using the calibrated interest rate tree	105
5.3	Black Derman and Toy: constant volatility	106
5.4	Black Derman and Toy (1990)	110
5.4.1	Implementing BDT	112
5.5	Some other one factor term structure consistent models	119
5.6	Summary	120
5.7	Exercises	120
6	INTEREST AND CREDIT RISK MODELLING	122
6.1	Evolutionary interest rate models	122
6.2	Vasicek(1977)	123
6.2.1	Implementing Vasicek	125
6.3	Cox Ingersoll and Ross (1985)	126
6.3.1	Implementing CIR	128
6.4	Other evolutionary models	128
6.5	Comparing the term structure consistent and evolutionary models	129
6.5.1	The seriousness of these problems from the practitioner's perspective	131
6.6	The problem with interest rate (and credit risk) modelling	133
6.6.1	So which model is best?	135
6.7	Non-stochastic credit risk models	135
6.7.1	Bierman and Hass (1975)	136
6.7.2	Jonkhart(1979)	138
6.8	Jarrow and Turnbull (1995)	141
6.8.1	Implementing JT	143
6.8.2	Using the calibrated JT model	147
6.9	Duffie and Singleton (1999)	149
6.9.1	An example of Duffie and Singleton (1999)	150
6.9.2	Using the calibrated DS model	153
6.10	Other credit risk modelling approaches	154
6.11	Summary	157
6.12	Exercises	157

7	HEDGING SOVEREIGN BONDS: THE TRADITIONAL APPROACH	159
7.1	Introduction	159
7.2	Macaulay duration	159
7.3	Modified duration	163
7.4	Other measures of interest rate sensitivity	166
7.5	Convexity	167
7.5.1	Properties of convexity	167
7.6	Hedging	169
7.7	Regression-based hedge ratios	170
7.7.1	An example of regression-based hedging	172
7.7.2	Comments on the regression-based hedge ratio	174
7.8	Duration-based hedge ratio	174
7.8.1	Delivery squeezes and the need for bond futures contracts	176
7.8.2	An example of duration-based hedging	179
7.9	Basis risk	183
7.10	Appendix	186
7.10.1	Derivation of the regression-based hedge ratio	186
7.10.2	The (modified) duration hedge ratio	189
7.11	Exercises	190
8	ACTIVE AND PASSIVE STRATEGIES	194
8.1	Introduction	194
8.2	Adjusting the duration of a portfolio	194
8.3	Active and passive strategies	197
8.4	Implementing a rate anticipation swap	199
8.5	Implementing an asset substitution swap	201
8.5.1	Butterfly/barbell swaps	203
8.5.2	Butterfly/barbell arbitrage	204
8.6	Portfolio immunization	207
8.7	Balance sheet immunization	214
8.7.1	The duration gap model	216
8.7.2	How can we eliminate the duration gap?	218
8.8	Bond portfolio management	220
8.9	Exercises	224
9	ALTERNATIVE HEDGE RATIOS	227
9.1	Improvements in modified duration hedge ratios	227
9.2	Fisher Weil (1971)	228
9.2.1	Examples of Fisher Weil duration	230

9.3	Key rate duration	232
9.3.1	Example of key rate duration	233
9.3.2	Measuring the volatility of a portfolio	235
9.4	Duration for corporate bonds	237
9.4.1	Credit risk adjusted duration	238
9.5	Delta hedging	242
9.5.1	PVBP delta hedge	242
9.5.2	Binomial delta hedging	243
9.6	Exercises	244
10	PRICING AND HEDGING NON-FIXED INCOME SECURITIES	246
10.1	Introduction	246
10.2	Floaters	246
10.3	Inverse floaters	251
10.3.1	Pricing inverse floaters via value additivity	252
10.3.2	Duration of an inverse floater	255
10.4	Caps, floors and collars	258
10.4.1	Cap example	260
10.4.2	Floor example	263
10.4.3	Collar example	265
10.5	Interest rate swaps	266
10.5.1	Valuation of swaps	267
10.5.2	Hedging a long swap	270
10.6	Exercises	271
11	CREDIT DERIVATIVES	274
11.1	Introduction	274
11.2	Types of credit derivatives	275
11.2.1	Single name credit derivatives	275
11.2.2	Multi-name credit derivatives	276
11.3	Vulnerable derivatives	277
11.4	Credit default swaps	280
11.4.1	An example of a credit default swap	283
11.5	Issues in default swap pricing	286
11.5.1	Theory: floating rate reference bond	287
11.5.2	Theory: fixed rate reference bond	288
11.5.3	Market imperfections: liquidity	290
11.5.4	Market imperfections: moral hazard	291
11.5.5	Conclusions	292
11.6	Exercises	293
12	EMBEDDED OPTIONS	296
12.1	Introduction	296

12.2	An introduction to callable/putable bonds	297
12.2.1	Valuing callable bonds	299
12.2.2	An example of valuing a callable bond	300
12.2.3	Valuing putable bonds	305
12.3	Measures of interest rate sensitivity for callable bonds	307
12.3.1	Negative convexity	310
12.4	Sinking fund bonds	314
12.4.1	Valuing a sinking fund bond: the sink by lottery only case	317
12.4.2	Sink by lottery or sink by open market purchase	319
12.5	Exercises	322
	ANSWERS TO SELECTED PROBLEMS	324
