

Risto Koponen - Kimmo Soramaki

Intraday Liquidity Needs in a Modern Interbank Payment System

A Simulation Approach

Contents

Abstract	5
Tiivistelmä	6
Foreword	7
1 Introduction	11
2 Liquidity and risks in payment systems	13
2.1 Sources of liquidity	13
2.2 Risks in the provision of liquidity	15
2.2.1 Counterparty risk'	15
2.2.2 Liquidity and gridlock risks	17
2.2.3 Systemic risk ,	19
2.3 Boundaries for liquidity needs	20
2.3.1 Theoretical bounds	20
2.3.2 Real bounds	25
3 Liquidity optimization methods	28
3.1 System-based optimization methods	29
3.1.1 Queuing of payments	29
3.1.2 Reordering of queued payments	29
3.1.3 Net settlement of queued payments	30
3.1.4 Splitting of payments	32
3.2 Action-based optimization methods	33
4 Payment systems simulator	34
4.1 Overview of the simulator	34
4.1.1 Account holder scenario	35
4.1.2 Settlement scenario	36
4.1.3 Systems scenario	37
4.2 Components of the simulator	38
4.2.1 Simulation run	39
4.2.2 System check	41
4.2.3 RTGS system	42
5 Simulations and payment data	44
5.1 The simulated payment systems	44
5.1.1 Pre-selected payment system structures	44
5.1.2 Simulations on the effect of TARGET transactions	46
5.1.3 Effects of optimization methods	47
5.2 The data used in the simulations	48
5.2.1 Collected data	48
5.2.2 Generated data	51
5.2.3 Estimated TARGET transactions	52

6	Indicators used in the study	55
6.1	Calculation of boundaries for liquidity need	55
6.2	Settlement delay indicator	59
6.3	Liquidity usage indicator	60
7	Results from the simulations	62
7.1	Upper and lower bounds for liquidity	63
7.1.1	Bounds with actual payment data	63
7.1.2	Bounds with generated payment data	66
7.1.3	Main results	69
7.2	Total daily value of payments and liquidity need	69
7.2.1	RTGS with queuing	70
7.2.2	Hybrid structure	73
7.3	Simulations of pre-selected payment system structures	76
7.3.1	RTGS-with-subnetting vs Hybrid structure	76
7.3.1.1	Simulations with actual payment data	76
7.3.1.2	Simulations with generated payment data	79
7.3.2	Hybrid vs Advanced Hybrid structure	80
7.3.2.1	Simulations with actual payment data	80
7.3.2.2	Simulations with generated payment data	82
7.3.3	Simulations on the effect of TARGET transactions	83
7.3.4	Occurrence of gridlocks in pre-selected scenarios	85
7.3.5	Main results	87
7.4	Simulations on the effects of optimization methods	88
7.4.1	Queuing of payments	89
7.4.2	Splitting of payments	90
7.4.3	Netting of queues	96
7.4.4	Main results	99
8	Conclusions	100
8.1	The adequacy of liquidity in the Finnish banking sector	100
8.2	The efficiency of different settlement structures	101
8.3	The effects of optimization methods	102
8.4	Suggestions for future research	102
	Literature	104
	Appendix 1. Key values from simulations of pre-selected systems	106
	Appendix 2. The Simulator	108
	Appendix 3. The Finnish interbank payment system	118
	Appendix 4. Input data	126
	Appendix 5. Glossary	130
