Contents

<i>Foreword by Eugene Silberberg</i>	page vii
<i>Preface</i>	ix
1 Essential Elements of Continuous Time Dynamic Optimization	1
2 Necessary Conditions for a Simplified Control Problem	24
3 Concavity and Sufficiency in Optimal Control Problems	52
4 The Maximum Principle and Economic Interpretations	77
5 Linear Optimal Control Problems	122
6 Necessary and Sufficient Conditions for a General Class of Control Problems	149
7 Necessary and Sufficient Conditions for Isoperimetric Problems	174
8 Economic Characterization of Reciprocal Isoperimetric Problems	211
9 The Dynamic Envelope Theorem and Economic Interpretations	231
10 The Dynamic Envelope Theorem and Transversality Conditions	261
11 Comparative Dynamics via Envelope Methods	287
12 Discounting, Current Values, and Time Consistency	312
13 Local Stability and Phase Portraits of Autonomous Differential Equations	337
14 Necessary and Sufficient Conditions for Infinite Horizon Control Problems	381

15	The Neoclassical Optimal Economic Growth Model	412
16	A Dynamic Limit Pricing Model of the Firm	437
17	The Adjustment Cost Model of the Firm	460
18	Qualitative Properties of Infinite Horizon Optimal Control Problems with One State Variable and One Control Variable	481
19	Dynamic Programming and the Hamilton-Jacobi-Bellman Equation	511
20	Intertemporal Duality in the Adjustment Cost Model of the Firm	537
	<i>Index</i>	567
