

ECOLOGY,
IMPACT ASSESSMENT,
AND ENVIRONMENTAL
PLANNING

WALTER E. WESTMAN

University of California, Los Angeles

CONTENTS

PART I. INTRODUCTION

1. Ecological Impact Assessment as a Discipline	3
Ecological Impact Assessment Defined	4
Rationales for Assessing Ecological Impact	5
Integrated Impact Assessment	6
Impact Assessment and Environmental Planning	8
The Phases of Ecological Impact Assessment	10

PART II. ENVIRONMENTAL LAW, PUBLIC POLICY, AND DECISION MAKING

2. Environmental Law: Planning Approaches and Ecological Constraints	29
Environmental Impact Assessment	30
Air Quality Management	40
Water Quality Management	53
Toxic Substances Control	58
Land Use Planning and Control	63
Biological Conservation	73
Noise Control	81
3. Environmental Decision Making	91
Fashioning Alternatives	91
Estimating Risk	97
Finding Optimum Solutions	104
Involving the Public	113
Resolving Conflict	119

PART III. SUMMARIZING AND EVALUATING IMPACTS

4. Quantitative Approaches	131
Impact Identification Techniques	131
Checklists	131
Matrix Methods	133
Networks	142
Impact Evaluation Techniques	148
Approaches that Aggregate Public Values	149
Approaches that Disaggregate Public Values	155
5. Economic Approaches	168
Social Theory Underlying Economic Evaluation	168
Evaluation Using Market Prices	172
Evaluation Using Shadow Prices for Nonmarketed Resources	178
Limitations of Economic Evaluation Methods	188

PART IV. PREDICTING IMPACTS: THE PHYSICAL ENVIRONMENT

6. Land	201
Landscape Characteristics as Indicators of Land Suitability and Vulnerability	201
Landscape Characteristics as Indicators of Landscape Processes	219
Mapping Landscape Characteristics	227
Evaluating Alternative Land Use Plans	252
7. Air and Water	269
Air	269
Calculating Pollutant Emissions	269
Predicting Ambient Concentrations	272
Comparing Ambient Concentrations to Standards	280
Long-distance Transport and Transformation of Pollutants	282
Predicting Ecological Responses to Air Pollutants	284
Water	290
Categorization of Pollutants	290
Pollution Dispersion	293
Water Quantity	314
Use of Computer Data Banks for Air and Water Pollution Studies	319

PART V. PREDICTING IMPACTS: THE BIOTA

8. Structure and Function of Biological Communities	329
Alternative Goals for Management of Ecosystems	329
Ecosystem Processes and Impact Assessment	332
Energy Fixation and Flow	332
Nutrient Assimilation and Release	349
Population Dynamics and Genetic Diversity	356
9. Ecotoxicology: Assessing Impacts of Pollutants on Biota	364
Ecotoxicology	365
Attributes for Predicting Species' Response to Pollution Stress	371
Organisms as Indicators of Environmental Conditions	382
Pollution Effects: Ecosystem-Level Approaches	390
Monitoring: Some Technological Advances	397
10. Sampling and Analysis of Ecological Data	409
Models of Community Structure	409
Relating Species Distributions to Environmental Factors	416
Data Collection	417
Data Analysis	426
11. Species and Landscape Diversity	444
Species Richness and Species-Area Curves	444
Heterogeneity and Equitability	447
Preservation of Diversity: Design of Nature Reserves	458
Landscape Ecology	467
12. Succession and Resilience of Ecosystems	480
Successional Concepts	480
Ecosystem Changes in Structure and Function during Succession	485
Predicting Successional Trends	488
Retgression	497
Ecosystem Inertia and Resilience	499
INDEX	524
