<i>List of figures and tables</i>	ix
1. Keynes, you should be alive today!	1
1.1 Postwar economic performance	
1.2 Keynes's revolution	
1.3 The academic resurrection of classical economics	
1.4 Differing views on the role of financial markets	
1.5 Five key points	
1.6 Keynes, the poet of money	
1.7 A brief outline of this monograph	
2. Keynes's principle of effective demand	17
2.1 Is lack of competition the fundamental cause of unemployment? Liquidity versus Say's Law	
2.2 Say's Law	
2.3 Classification and the principle of effective demand	
2.4 Why flexible wages do not assure full employment	
2.5 Some further clarifications	
Appendix 2A1 A simple illustration of the principle of effective demand	
Appendix 2A2 Deriving Keynes's aggregate supply and demand analysis from Marshallian micro demand and supply functions	
3. Uncertainty and reality in economic models	39.
3.1 A parable: the fable of the P's, or what mortals these P's fool!	
3.2 Axioms and model building	
3.3 Classical axioms and money's elasticity properties	
3.4 Two concepts of economic reality	
3.5 A brief excursion into the history of economic thought	
3.6 Uncertainty and ergodic stochastic processes	
3.7 Immutable versus transmutable theories of reality	
3.8 Uncertainty and 'irrational' behavior	

3.9	Crucial decisions and Schumpeterian entrepreneurs	
Appendix 3A	Are probabilities knowable but unknown because of limited human computing power?	
4.	Investment: illiquid real capital versus liquid assets	70
4.1	Two types of investment	
4.2	Markets, contracts, liquidity and chartalist money	
4.3	Financing and funding assets: why money-matters	
4.4	Asset position taking and liquidity -	
4.5	Real capital, savings, time preference and liquidity preference	
4.6	Attributes of all durables	
5.	Why liquidity preference?	87
5.1	The four motives for holding money	
5.2	The demand for the medium of contractual settlement	
5.3	The demand for a liquid time machine	
5.4	Bulls versus bears	
5.5	The finance motive and endogenous money	
5.6	The finance motive, finance and funding	
5.7	Endogenous versus exogenous money	
6.	Financial markets, liquidity and fast exits	104
6.1	The double-edged sword of financial markets	
6.2	Market liquidity, fast exits and funding investments	
6.3	The market for securities	
6.4	The different role of banks and nonbank financial intermediaries	
6.5	Bank loans and money-market financial intermediaries	
6.6	Conclusion	
7.	Planned investment, planned savings, liquidity and economic growth	120
7.1	Harrod's actual, warranted and natural rates of growth	
• 7.2	Planned savings and the supply of financial assets	
7.3	Ownership and liquidity	
7.4	External funding and savers' 'nonspeculative' demand for securities	
7.5	Actual growth when new issues exceed the nonspeculative demand for securities	
7.6	The contractionary case with a bull market	

- 7.7 Economic growth, liquidity and funding 'other' spending sectors
- 7.8 Some conclusions

- 8. Complicating the picture: money and international liquidity 136
 - 8.1 Open versus closed and unionized versus non-unionized monetary systems
 - 8.2 Aggregate accounting as a basis for the closed-open dichotomy
 - 8.3 The accounting value of exports and imports and transfer pricing
 - 8.4 The balance of payments accounting statement
 - 8.5 Measuring the degree of openness
 - 8.6 The UMS-NUMS classification
 - 8.7 Exchange uncertainty
 - 8.8 Was the gold standard a UMS?

- 9. Trade imbalances and international payments 150.
 - 9.1 Classical real adjustment processes
 - 9.2 Trade adjustments, payments adjustments and the Marshall-Lerner condition
 - 9.3 Income effects and payments imbalances
 - 9.4 Thirlwall's Law: extending Harrod's trade multiplier analysis
 - 9.5 The demand for money - domestic or international
 - 9.6 The need for reserves

- 10. International liquidity and exchange rate stability 169
 - 10.1 The facts versus the theory of flexible exchange rates
 - 10.2 Fixed versus flexible exchange rates and asset holdings
 - 10.3 The efficient market hypothesis again
 - 10.4 Who should 'make' the exchange rate market?

- 11. If markets are efficient why has there been so much volatility in financial markets? 180
 - 11.1 Efficiency versus liquidity
 - 11.2 Taxing volatility: theory versus the facts
 - 11.3 Ergodicity, efficient markets and noise traders
 - 11.4 Summers, Tobin and super-efficient markets
 - 11.5 Keynes, speculation and liquid financial markets
 - 11.6 Keynes, liquid financial markets and the empirical findings

11.7	Ergodicity, efficient markets and the empirical findings	
11.8	Are real capital allocation decisions efficient?	
11.9	Speculative whirlpools and bandwagons	
11.10	A policy implication: buffering conventional wisdom	
12.	Exchange rates and the Tobin tax	200
12.1	Is social control of exchange markets bad?	
12.2	Capital uncertainty, speculative flows and the Tobin tax	
13.	The plumbers'-solution to destabilizing international capital flows	213
13.1	Capital movements	
13.2	Flexible exchange rates and export-led growth	
13.3	Explaining the facts	
13.4	A lesson from the gold standard era	
13.5	Plumbing solutions to end financial market volatility	
13.6	The Bretton Woods experience and the Marshall Plan	
14.	The architectural solution: reforming the world's money •	231
14.1	Reforming the international payments system	
14.2	Alternative financial architectural proposals	
14.3	Criticism of Williamson's FEER proposal	
14.4	Criticism of McKinnon's PPP proposal	
14.5	A comparison of the three architectural proposals	
14.6	What if?	
14.7	Conclusion	
15.	The economy and the twenty-first century	253
15.1	The positive role of government	
	<i>Index</i>	257
