Detailed Contents

Preface xv

About the Author xxiv

Chapter 1. Stata Basics 1

1.1 Introduction to Stata 2

1.1.1. Do You Still Need to Use Commands? 3

1.1.2. Stata at First Sight: Interface, Menus, and Toolbar 4

1.1.3. Creating a File and Entering Data 7

1.1.4. How to Open an Existing Data File 9

1.1.5. The Structure of Stata Commands 10

1.1.6. Do-Files 12

1.1.7. How to Save Stata Results 15

1.1.8. What If I Have a Question? How Do I Get Help? 16

1.2 Data Management 19

1.2.1. Creating a New Variable 19

1.2.2. Recoding a Variable 22

1.2.3. Labeling a Variable 23

1.2.4. Labeling Values 24

1.2.5. The egen Command 25

1.2.6. How to Deal With Missing Values When Recoding Variables 26

1.2.7. Other Useful Data Management Commands 71

1.3 Graphs 28

1.3.1. Histograms 28

1.3.2. Bar Charts 29

1.3.3- Box Plots 32

1.3.4. Scatter Plots 33

1.3-5. How to Save Graphs 34

1.3.6. Stata Graph Editor 35

1.4 Summary of Stata Commands in This Chapter 40

1.5 Exercises 42

Chapter 2. Review of Basic Statistics **43**

2.1 Understand Your Data Using Descriptive Statistics 44
2.2 Descriptive Statistics for Continuous Variables Using Stata 44
2.3 Frequency Distribution for Categorical Variables Using Stata 51
2.4 Independent Samples *t* Test Using Stata 56
2.5 Paired-Samples *t* Test 60
2.6 Analysis of Variance (ANOVA) 62
2.7 Correlation 66
2.8 Simple Linear Regression 70
2.9 Multiple Linear Regression 74
2.10 Chi-Square Test 80
2.11 Making Publication-Quality Tables Using Stata 84
2.12 General Guidelines for Reporting Results 87
2.13 Summary of Stata Commands in This Chapter 89
2.14 Exercises 90

Chapter 3. Logistic Regression for Binary Data **93**

3.1 Logistic Regression Models: An Introduction 94
3.1.1. Why Do We Need a Logistic Transformation? 95
3-1.2. Probabilities, Odds, and Odds Ratios 97
3-1.3- Transformation Among Probabilities, Odds, and Log Odds in Logistic Regression 99
3-1.4. Goodness-of-Fit Statistics 100
3-1.5. Testing Significance of Predictors 104
3-1-6. Interpretation of Model Parameter Estimates in Logistic Regression 105
3.2 Research Example and Description of the Data and Sample 107
3.3 Logistic Regression With Stata: Commands and Output 107
3-3 1' Simple Logistic Regression Using Stata 107
3-3-2. Multiple Logistic Regression 113
3.4 Making Publication-Quality Tables 130
3.5 Reporting the Results 134
3.6 Summary of Stata Commands in This Chapter 136
3.7 Exercises 137

Chapter 4. Proportional Odds Models for Ordinal Response Variables **139**

4.1 Proportional Odds Models: An Introduction 140
4.1.1. Odds and Odds Ratios in PO Models 143
4.1.2. Brant Test of the PO Assumption 145
4.1.3. Goodness of Fit 145
4.1.4. Interpretation of Model Parameter Estimates 148

4.2 Research Example and Description of the Data and Sample 149
4.3 Proportional Odds Models With Stata: Commands and Output 149
4.3- 1. The PO Model: One-Predictor Model *150*
4.3-2. The PO Model: Multiple-Predictor Model *156*
4-3-3- Model Comparisons Using the Log Likelihood Ratio Test and Other Fit Statistics *169*
4.4 Making Publication-Quality Tables 172
4.5 Reporting the Results 175
4.6 Summary of Stata Commands in This Chapter 177
4.7 Exercises 178

Chapter 5. Partial Proportional Odds Models and Generalized Ordinal Logistic Regression Models 179

5.1 Partial Proportional Odds Models and Generalized Ordinal Logistic Regression Models: An Introduction 180
5.1-1. Odds and Odds Ratios *182*
5.1.2. Goodness of Fit *183*
5-1-3- Interpretation of Model Parameter Estimates *183*
5.2 Research Example and Description of the Data and Sample 184
5.3 Partial Proportional Odds Models and Generalized Ordinal Logistic Models With Stata: Commands and Output 184
5-3-1- Stata Commands and Output *184*
5.4 Generalized Ordinal Logistic Regression Models With Stata: *An Example* *202*
5.4.1. Stata Commands and Output *202*
5.5 Making Publication-Quality Tables 205
5.6 Reporting the Results 214
5.7 Summary of Stata Commands in This Chapter 216
5.8 Exercises 217

Chapter 6. Continuation Ratio Models 219

6.1 Continuation Ratio Models: An Introduction 220
6.1.1. Conditional Probabilities, Odds, and Odds Ratios *221*
6.1.2. Goodness-of-Fit Statistics *223*
6.1.3. Interpretation of Model Parameter Estimates *223*
6.2 Research Example and Description of the Data and Sample 224
6.3 Continuation Ratio Models With Stata: Commands and Output 225
6.3 1. The CR Model With the `logit` *Link: One-Predictor Model* *225*
6.3-2. The CR Model With the `logit` *Link: Multiple-Predictor Model* *231*
6-3-3- Fitting Continuation Ratio Models Using the `seqlogit` *Command* *234*

6.4 Making Publication-Quality Tables 241
6.5 Reporting the Results 244
6.6 Summary of Stata Commands in This Chapter 245
6.7 Exercises 246

Chapter 7. Adjacent Categories Logistic Regression Models 247

7.1 Adjacent Categories Models: An Introduction 248
7.1.1. Odds and Odds Ratios in AC Models 248
7.1.2. Goodness-of-Fit Statistics 251
7.1-3- Interpretation of Model Parameter Estimates 251
7.1.4. From the Multinomial Logistic Model to the AC model 252
7.2 Research Example and Description of the Data and Sample 256
7.3 Adjacent Categories Models With Stata: Commands and Output 256
7.3-1' Multinomial Logistic Regression Using Stata 256
7-3-2. Single-Predictor AC Model Using Stata 260
7.3-3- Making Publication-Quality Tables for the Single-Predictor AC Model 264
7-3-4. Adjacent Categories Models With Stata: Multiple-Predictor Model 267
7-3-5- Making Publication-Quality Tables for the Multiple-Predictor Model 281
7.4 Reporting the Results 285
7.5 Summary of Stata Commands in This Chapter 287
7.6 Exercises 288

Chapter 8. Stereotype Logistic Regression Models 289

8.1 Stereotype Logistic Regression Models: An Introduction 290
8.1.1. Odds and Odds Ratios in Stereotype Logistic Regression Models 292
8.1.2. Model Fit Statistics 294
8.1.3- Interpretation of Model Parameter Estimates 294
8.2 Research Example and Description of the Data and Sample 295
8.3 Stereotype Logistic Regression Models With Stata: Commands and Output 295
8.3.1- The SL Model: One-Predictor Model 296
8.3-2. The SL Model: Multiple-Predictor Model 301
8.3-3- Model Comparisons Using the Log Likelihood Ratio Test 316
8.4 Making Publication-Quality Tables 317
8.5 Reporting the Results 320
8.6 Summary of Stata Commands in This Chapter 322
8.7 Exercises 323

Chapter 9. Ordinal Logistic Regression With Complex Survey Sampling Designs **325**

9.1 Proportional Odds Models With Complex Survey Sampling Designs: An Introduction 326
9.1.1. Features of Complex Surveys 326
9.1.2. Variance Estimation in Complex Survey Sampling 328
9.2 Research Example and Description of the Data and Sample 329
9-3 Data Analysis With Stata: Commands and Output 329
9-3-1. Proportional Odds Model With Four Explanatory Variables Without Weights 329
9-3-2. Proportional Odds Model With Weights 331
9-3-3- Proportional Odds Model for Complex Survey Data Using the Stata svy Command 334
9-3-4. How to Deal With Singleton Strata 338
9.4 Making Publication-Quality Tables 343
9.5 Reporting the Results 345
9.6 Summary of Stata Commands in This Chapter 347
9.7 Exercises 348

Chapter 10. Multilevel Modeling for Continuous and Binary Response Variables **349**

10.1 Multilevel Modeling: An Introduction 350
10.1.1. Multilevel Data Structure 350
10.1.2. Intraclass Correlation 351
10.1-3- Overview of a Basic Two-Level Model 351
10.1.4. Model-Building Strategies 353
10.1.5. Model Fit Statistics 353
10.1.6. Centering 354
10.1.7. Data Structure for Model Fitting 355
10.2 Multilevel Modeling for Continuous Outcome Variables 356
10.2.1. Research Example and Research Questions 356
10.2.2. Description of the Data and Sample 356
10.2.3. Multilevel Modeling for Continuous Outcome Variables With Stata: Commands and Output 357
10.2.4. Making Publication-Quality Tables 368
10.2.5. Reporting the Results 369
10.3 Multilevel Modeling for Binary Outcome Variables 373
10.31. Odds and Odds Ratios in Multilevel Logistic Regression Models 375
10-3-2. Research Example and Research Questions 375
10-3-3- Description of the Data and Sample 376

10.3.4. Multilevel Modeling for Binary Outcome Variables With Stata: Commands and Output 376
10.3.5. Making Publication-Quality Tables 394
10.3.6. Reporting the Results 397
10.4 Summary of Stata Commands in This Chapter 398
10.5 Exercises 401

Chapter 11. Multilevel Modeling for Ordinal Response Variables 403

11.1 Multilevel Modeling for Ordinal Response Variables: An Introduction 404
11.1.1. Model Specification 404
11.1.2. Odds and Odds Ratios in Multilevel PO Models 408
11.1.3- Likelihood Ratio Test 408
11.2 Research Example: Research Problem and Questions 409
11.2.1. Description of the Data and Sample 409
11.3 Multilevel Modeling for Ordinal Response Variables With Stata: Commands and Output 410
11-3-1- Unconditional Model or Null Model (Model 1) 411
11-3-2. Random-Intercept Model (Model 2) 414
11-3-3- Random-Coefficient Model With a Level 1 Variable (Model 3) 417
11-3-4. Contextual Model With Both Level 1 and Level 2 Variables (Model 4) 421
11-3-5- Contextual Model With Cross-Level Interactions (Model 5) 425
11.3-6. Model Comparisons Using the AIC and BIC Statistics 428
11-3-7. Computing the Estimated Probabilities With the margins Command 429
11-3-8. Fitting Multilevel PO Models Using the meglm Command 433
11.3-9. Fitting Multilevel PO Models Using the gllamm Command 435
11.4 Making Publication-Quality Tables 439
11.5 Reporting the Results 444
11.6 Summary of Stata Commands in This Chapter 446
11.7 Exercises 447

Chapter 12. Beyond Ordinal Logistic Regression Models: Ordinal Probit Regression Models and Multinomial Logistic Regression Models 449

12.1 Ordinal Probit Regression Models 450
12.1.1. Ordinal Probit Regression Models: An Introduction 450
12.1.2. Description of the Research Example, Data, and Sample 453
12.1.3- Ordinal Probit Models With Stata: Commands and Output 453
12.1.4. Interpreting the Output 454

12.1.5. Interpreting the Marginal Effects With the margins Command 457
12.1.6. Computing the Marginal Effects With the Improved margins Command in Stata 14 460
12.1.7. Interpreting the Estimated Probabilities With the margins Command 461
12.1.8. Model Comparison Using the Log Likelihood Ratio Test 467
12.1.9. Making Publication-Quality Tables Comparing the Probit Model and Proportional Odds Model 468
12.1.10. Reporting the Results 469
12.2 Multinomial Logistic Regression Models 471
12.2.1. Multinomial Logistic Regression Models: An Introduction 471
12.2.2. Odds in Multinomial Logistic Models 472
12.2.3- Odds Ratios or Relative Risk Ratios in Multinomial Logistic Regression Models 473
12.2.4. Description of the Research Example, Data, and Sample 474
12.2.5. Multinomial Logistic Regression Models With Stata: Commands and Output 474
12.2.6. Interpreting the Output 475
12.2.7. Interpreting the Odds Ratios of Being in a Category j Versus the Base Category 1 478
12.2.8. Interpreting the Estimated Probabilities With the margins Command 480
12.2.9. Independence of Irrelevant Alternatives (IIA) Tests 485
12.2.10. Making Publication-Quality Tables 488
12.2.11. Reporting the Results 492
12.3 Summary of Stata Commands in This Chapter 494
12.4 Exercises 496

Key Formulas for Statistical Models **499**

Appendix: List of Stata User-Written Commands **501**
