The Uzawa-Lucas Endogenous Growth Model

PAOLO MATTANA
The University of Cagliari, Italy

ASHGATE

Contents

List of Figures *ix*
List of Tables *xi*
Preface *xiii*
Introduction and Outline of the Book *xv*

1 The Model and the Existence of Non-Degenerate Balanced Solutions **1**
1.1 Introduction and Plan of the Chapter 1
1.2 The Formal Structure of the Model 3
1.2.1 The Environment and the Technology 3
1.2.2 Preferences 4
1.3 The Optimization Problems 4
1.3.1 The Optimization Problem from the Planner's Viewpoint 4
1.3.2 The Optimization Problem in the Market Economy 6
1.3.3 The Properties Shared by Optimal and Equilibrium Paths 9
1.4 Sufficiency of the *Admissible Candidates* 10
1.5 The Possibility for Non-Degenerate Balanced Dynamics 11
1.5.1 Some Preliminary Properties of the Balanced Evolution of the Economy 13

2 The General Properties of the Uzawa-Lucas Economy **15**
2.1 Introduction and Plan of the Chapter 15
2.2 Some General Features of Balanced Growth 18
2.2.1 Some BGP-Stationary Useful Variables: the *Great Ratios* 18
2.2.2 The *Adjoint Variables* along the BGP 19
2.3 The Transition along Optimal and Equilibrium Paths 23
2.3.1 Some Principles for Mathematical Analysis 23
2.3.2 A Dimensional-Reducing Transformation of the Variables 24
2.3.3 The Jacobian and the Characteristic Equation 25
2.3.4 The Potential for non Saddle-Path Behavior in the Dynamics of the Model 26
2.3.5 The Functions Linking the State of the Economy to its Control Part 27
2.3.6 The Mechanisms Driving the Adjustment of the Economy 28

2.3.7 Growth Cases 29
2.4 The Possibility of a Further Dimensional Reduction 30
2.5 *Appendix* 32

3 The Centralized Economy 37
3.1 Introduction and Plan of the Chapter 37
3.2 Optimal BGP Evolution of the Variables 40
3.2.1 The Relevant System of Differential Equations 40
3.2.2 The Optimal Allocation of Time along the BGP 40
3.2.3 The BGP Growth Rate of the Centralized Economy 42
3.2.4 The BGP Values of the *Great Ratios* 43
3.2.5 The *Adjoint Variables* Along the BGP 44
3.3 Transitional Dynamics. The Local Point of View 47
3.3.1 A First Stationarizing Transformation of the Variables 47
3.3.2 The Local Stability Properties 47
3.3.3 Some Local Characteristics of the Transition 49
3.4 Transitional Dynamics. The Global Point of View 52
3.4.1 The Dynamics in R^2 52
3.4.2 The Logistic Path of the Average Goods Production 52
3.4.3 The Global Behavior of the Average Consumption 54
3.4.4 Time Paths in the Original Dimension 56
3.4.5 The Explicit Transition Simulated 58
3.5 Global Welfare Analysis 65
3.6 *Appendix* 68

4 The Properties of the Competitive Equilibrium 73
4.1 Introduction and Plan of the Chapter 73
4.2 Equilibrium Dynamics Along the BGP 77
4.2.1 The Relevant System of Differential Equations 77
4.2.2 The Equilibrium Allocation of Time along the BGP 77
4.2.3 The BGP Growth Rates of the Primitive Variables 80
4.2.4 The Stationary Values of the *Great Ratios* 81
4.2.5 The BGP Behavior of the *Adjoint Variables* 83
4.3 Transitional Dynamics from the Local Point of View 85
4.3.1 A Stationarizing Transformation of the Dynamic Laws 85
4.3.2 The Local Stability Properties of the Fixed Point in E^3 86
4.3.3 A Numerical Investigation of the Characteristics of the Eigenvalues 88
4.3.4 The Economic Forces Governing Transition in the Market Economy 92
4.3.5 The Emergence of Deterministic Cycles 98
4.3.6 The Stability Properties of the Orbits 99
4.4 Transitional Dynamics from the Glocal Point of View 101
4.4.1 Restricted Parameter Space and the Laws of Motion 101

4.4.2 The Solution of the Simplified Differential Equations 101
4.4.3 Indeterminacy *Versus* Exogenous Growth 104
4.4.4 The Market Economy Belonging to the Exogenous Growth Case 108
4.4.5 A Numerical Analysis of Equilibrium Paths when Indeterminacy is Present 111
4.4.6 Welfare Considerations in the Exogenous Growth Case 117

5 The Inefficiency of the Market Economy and the Design of Optimal Fiscal Policies 119
5.1 Introduction and Plan of the Chapter 119
5.2 Centralization *Versus* Decentralization. The Parameter Space 121
5.3 The Inefficiency and the BGP 123
5.3.1 The Inefficiency and the BGP Growth Rate of the Economy 123
5.3.2 The Inefficiency and the *Great Ratios* 125
5.3.3 The Inefficiency and the *Adjoint Variables* 125
5.4 Comparing Transitional Dynamics from the Local Point of View 126
5.4.1 The Inefficiency and the Stability Properties in R^3 126
5.4.2 The Speeds of Adjustment 127
5.4.3 The Slopes of the Functions Linking Controls to States 128
5.5 Optimal and Equilibrium Off-balanced Paths from the Global Point of View 129
5.5.1 Optimal and Equilibrium Exogenous Growth 129
5.5.2 Welfare when the Economy Belongs to the Exogenous Growth Case 135
5.6 The Desirability of Public Policies 136
5.6.1 The Optimization Problem in Presence of Interventions 137
5.6.2 Some General Characteristics of Optimal Fiscal Policy 138
5.6.3 The Optimal Fiscal Policy Along the BGP 139
5.6.4 Fiscal Policy in Transition: the Case of a Small Coefficient of Risk Aversion 142
5.6.5 Fiscal Policy in Transition: the Case of a Large Coefficient of Risk Aversion 146

Bibliography 149
Index *153*
