

Periodic Time Series Models

PHILIP HANS FRANSES
AND
RICHARD PAAP

OXFORD
UNIVERSITY PRESS

Contents

List of figures	ix
List of tables	x
Notation and abbreviations	xii
1 Introduction	1
1.1 Preliminaries	1
1.2 Readership	3
1.3 Why periodic models?	5
1.4 Outline of this book	8
2 Properties of seasonal time series	11
2.1 Graphs and basic regressions	11
2.2 Typical features of seasonal time series	17
2.3 Summary and outlook	25
3 Univariate periodic time series models	27
3.1 Representation	28
3.2 Stationarity in periodic autoregressions	34
3.3 Model selection and parameter estimation	39
3.4 Forecasting	46
3.5 Effects of neglecting periodicity	48
3.6 Periodic conditional heteroskedasticity	54
3.7 Discussion	58
4 Periodic models for trending data	61
4.1 Representation of unit roots	64
4.2 Intercepts and deterministic trends	72
4.3 Testing for unit roots	77
4.4 Forecasting trending time series	92
4.5 Effects of neglecting periodicity	97
4.6 Conclusion	99
4.A EViews code	99

5 Multivariate periodic time series models	103
5.1 Notation and representation	104
5.2 Useful representations in practice	108
5.3 Cointegration testing—single-equation approach	111
5.4 Cointegration testing—full-system approach	117
5.5 Discussion	122
Appendix A	125
Critical values of the Dickey and Fuller statistics	125
Appendix B	126
Critical values of the Johansen trace statistics	126
Appendix C	129
Critical values of the Boswijk and Franses statistic	129
References	131
Author index	141
Subject index	145
