Table of Contents

Preface v

Uncertainty and Complexity 1

1.1 Towards a Science of Uncertainty 1
1.2 Dynamic Systems in Perspective 4
1.3 Pathways to Nonlinear Dynamic Modelling 5
1.4 Dissipative Structures and Synergetics 8
1.5 The Science of Complexity in the Space-Economy 11
1.6 Structure of the Book 14

2. **Nonlinear Dynamics in Spatial Systems: The Relevance of Chaos and Asymmetric Behaviour** 17

2.1 Nonlinear Modelling: Exploring the Scene 17
2.2 Pathways to Nonlinearities and Chaos 18
2.3 Modelling Chaos Phenomena 25
2.4 Chaos Theory and Asymmetries in Economics 28
2.5 Analysis of Chaos in Regional Economics 34
2.5.1 Introduction 34
2.5.2 Urban systems 34
2.5.3 Transport systems 37
2.5.4 Migration systems 38
2.5.5 Industrial/production systems 38
2.5.6 General comments 39
2.6 Concluding Remarks 40

3. **Evolutionary Approaches to Spatial-Economic Systems: The Relevance of Ecologically-Based Models** 41

3.1 Introduction 41
3.2 Connections between Ecology and Economics 42
3.3 Ecologically-Based Models 44
3.3.1 The May model 44
3.3.2 The Lotka-Volterra model 45
3.4 Niche Theory as a Unifying Framework 51
3.4.1 Niche concepts 51
3.4.2 Formalization of the niche concept 52

3.5 Systems Evolution by means of Niche Chains 55
3.5.1 Introduction 55
3.5.2 Evolution of self-organizing systems 56
3.6 Analysis of a Two-Dimensional Niche System 58
3.6.1 Introduction 58
3.6.2 A niche model in continuous form 58
3.6.3 A niche model in discrete form 60
3.6.4 A methodological view 61
3.7 Simulation Experiments: Illustration of a Two-Dimensional Niche System 62
3.7.1 A simple interurban transport model 62
'3.7.2 Numerical experiments: the case of a 'dominance' competition system 63
3.7.3 Numerical experiments: the case of a 'dominance' symbiosis system 66
3.8 An Economic Interpretation of Niches 67
3.8.1 Introduction 67
3.8.2 Simulation experiments 68
3.9 Simulation Experiments: a Three-Dimensional Niche System 69
3.9.1 Introduction 69
"3.9.2 Simulation experiments 69
3.10 A Niche Model for the Evolution of Cities 72
3.11 Concluding Remarks 74

4. **Complex Synergetics: Spatial Growth and Diffusion Processes** . 75

4.1 Space-Time Aspects of Growth and Innovation Diffusion . 75
4.2 Modelling Innovation Diffusion in a Space-Time Context . 77
4.3 Modelling Growth and Diffusion Processes: A Nested Synergetic Approach 81
4.3.1 Introduction to dynamic diffusion and synergy . . . 81
4.3.2 Presentation of a growth diffusion model 83
4.4 Simulation Experiments for a Synergetic Dynamic Model for Growth and Innovation Diffusion 85
4.4.1 Introduction 85
4.4.2 Case 1: two areas (core/periphery) 85
4.5 Simulation Experiments for Three-Dimensional Spatial Dynamics 99
4.5.1 Introduction 99
4.5.2 Case 2: three areas 101
4.6 Conclusions and Future Research Directions 105

5. Complexity and Connectivity in Multi-Layer Spatial-Economic Systems . . . 107

5.1 Introduction . . . 107
5.2 Multi-Layer Niche Structures: an Alternative View 108
5.3 A Hierarchical Evolutionary Approach to Interacting Spatial Systems . . . 110
5.4 A Multi-Layer Economic-Environmental Model for Spatial Competition . . . 112
5.4.1 Introduction . . . 112
5.4.2 A two-layer model with three competing modes 113
5.4.3 Simulation experiments for the modal choice model . . . 114
5.4.4 Concluding remarks . . . 124
5.5 A Multi-Layer Complex Modal Choice Model with Dynamic Growth Rates . . . 125
5.5.1 Introduction) . . . 125
5.5.2 Stable beh'aviour . . . 125
5.5.3 Cyclical/irregular behaviour . . . 128
5.6 Modelling Spatial Complexity and (In)stability . . . 132
5.6.1 Connectivity, networks and complexity in spatial-economic growth . . . 132
5.6.2 Connectivity in space-time systems . . . 134
5.6.3 A simple spatial-economic growth model . . . 135
5.6.4 Stability and complexity in a simple spatial network model . . . 136
5.7 Conclusion and Future Research Directions . . . 146

6. **The Economics of Network Synergy and Spatial Evolution** . . . 149

6.1 Network synergy: an Introduction . . . 149
6.2 Network Synergy and Performance . . . 151
6.3 An Economic Performance Analysis of Network. Links . . 1 54
6.4 A Single Mode Analysis for Network Behaviour . . . 157
6.5 A Multi-Modal Analysis for Network Behaviour . . . 161
6.6 Towards Dynamic Network Synergy Models in an Evolutionary Perspective . . . 162
6.6.1 Introduction . . . 162
6.6.2 Prey-predator relationships between the input factors . . . 163
6.6.3 Symbiotic relationships between the input factors 165
6.6.4 Ecological relationships between input factors and output . . . 1 67
6.6.5 Competitive relationships between input factors 175
6.7 Conclusions . . . 185
Annex 6A Typologies of Network Performance Attractors . . . 187

7. Neural Networks for the Analysis of Complex Spatial Systems 193

7.1 Introduction to Neurocomputing 193
7.2 A Brief History of Neural Network Analysis 196
7.3 The Structure of Neural Networks 197
7.3.1 Micro-structure 198
7.3.2 Meso-structure 199
7.3.3 Macro-structure 201
7.4 The Learning Phase in Neural Networks 201
7.4.1 Supervisor learning 202
7.4.2 Unsupervisor learning 204
7.5 Neural Networks and the Social Sciences 205
7.6 Applications of Neural Networks in Spatial Economics and Transportation Science 207
7.6.1 Introduction 207
7.6.2 Neural Networks in spatial economic systems . . 207
7.6.3 Neural Networks in transport systems 211
7.7 Concluding Remarks 212

Complex Spatial Interaction Systems: Empirical Applications by Means of Neural Networks and Logit Models 215

8.1 Introduction 215
8.2 The Models Adopted 216
8.2.1 Introduction 216
8.2.2 The logit approach 217
8.2.3 The feedforward neural net model 218
8.2.4 Statistical indicators 218
8.3 Neural Networks and Logit Models: Applications to Passenger Transport Flows in Italy 219
8.3.1 Introduction 219
8.3.2 Spatial forecasting results 221
8.3.3 Impacts of transport time 225
8.3.4 Concluding remarks 229
8.4 Neural Networks and Logit Models: Applications to European Freight Transport Flows 230
8.4.1 Introduction 230
8.4.2 Spatial forecasting results 231
8.4.3 Sensitivity analysis by means of social costs scenarios 235
8.5 Conclusions 237

9. **The Complex Dynamics of Spatial-Economic Systems Revisited** 239

9.1 Nonlinear Pathways: Reprise 239
9.2 Nonlinear Pathways to the Future 244
