AN ECONOMETRIC ANALYSIS
OFTIME USE IN FINNISH
HOUSEHOLDS

HELSINKI SCHOOL OF ECONOMICS
ACTA UNIVERSITATIS OECONOMICAE HELSINCIENSIS

Contents

INTRODUCTION: TIME-USE AND ECONOMICS

0	INTRODUCTION	1
1	HOUSEHOLD PRODUCTION THEORY	3
1.1	The Beckerian Model of Time Allocation	3
1.2	Testing Critical Assumption of Household Production Model	13
1.2.1	Joint Production	13
1.2.2	Separability	15
1.2.3	Constant Returns to Scale	16
1.2.4	Bargaining Models	17
1.3	Conclusion	17
II	TIME-USE DATA	18
2	International Time-use Data	18
3	Methods for Collecting Time-use Data	21
3.1	Diary	21
3.2	Individual and Household Questionnaire	24
3.3	Activity Coding Lists	25
4	Finnish Time-use Survey 1999/2000	26
4.1	The Structure of the Data	26
4.2	Finnish Time-use Survey vis-a-vis European Counterparts	27
4.3	Correcting for Sampling and Clustering in Finnish Time-use Data	28
III	ECONOMETRIC PROBLEMS IN USING TIME-USE DATA	28
5	Suitability of Time-use Data for Microeconomic Modelling	28
5.1	Characteristics and Problems with Time-use Data	30
5.1.1	Choosing Between Weekly or Daily Observations	30
5.1.2	The Question of Aggregation	32
5.2	Measurement Problems and Omitted Variables	33
5.3	Tobit, Heckman and Double-hurdle	34
IV	PRELIMINARY IMPUTATIONS DONE IN THE ESSAYS	37
6.1	Calculating and Imputing Net Wage Rates	37

6.2	Predicting Market Work Hours	-	44
6.3	Weighting the Sample		45
6.4	Correcting for Weekly and Seasonal Variations		46
V	SUMMARY OF THE ESSAYS		47
VI	CONCLUSIONS		52
References			53
Appendix 1	European Time-use Surveys by March 2003		61
Appendix 2	Finnish Tax System in year 2000		64
Appendix 3	Main and Secondary Activities in Finnish Time-use Survey 1999/2000		65

ESSAY 1.

Is Time Spent Together in Finnish Flouseholds?	69
1 Introduction	69
2 Sequential Model of Time Allocation	72
3 Is joint Time Normal Good?	74
4 Previous Empirical Evidence	75
5 Sample	79
6 Some Preliminary Features about the Joint Time-use of Spouses	81
7 Fractional Logistic Estimation	88
8 Empirical Specification	90
9 Results	94
10 Conclusions	100
Appendix 1 Fractional Logistic Estimation Results for Combined Joint Housework and Leisure	102
References	104

ESSAY 2.

Daily Variation in Time Use — A Count Data Application	107
1, Introduction	107
2 Previous Empirical Literature	109
3 Model	111

4	Sample	<	113
5	Variety in Time Use in Finnish Households		U5
6	Econometric Methods		125
7	Specifications Used		128
8	Results		130
9	Conclusions	.	136

Appendix 1	Estimation Results for Variety in Total Activities by Gender		138
Appendix 2	Estimation Results for Variety in Non-Work Activities for both Primary and Secondary Activity Combined		140
Appendix 3	Tobit Estimation Results for Unspecified Time Use		142
References		-	145

ESSAY 3.

Active Life during Leisure Time — Are the Winners Taking it All?		147
--	--	-----

1	Introduction	147
2	Previous Empirical Literature	150
3	Model	154
4	Defining Active versus Passive Leisure	156
5	Sample	158
5.1	Active and Passive Leisure in Total	159
5.2	Distribution within Active Leisure	163
6	Econometric Methods	166
6.1	Tobit	167
6.2	Multivariate Probit	168
7	Results	172
8	Conclusions	180

Appendix 1	Estimation Results for Narrowly Defined Active Leisure by Gender	182
Appendix 2	Summary of Diagnostic Tests for Narrowly Defined Active Leisure	183
Appendix 3	Distributional Plots of Active and Passive Leisure	184
References		185

ESSAY 4.

More than Two Hands: Is Multitasking an Answer to Stress?	189
1 Introduction	189
2 Defining Multitasking	191
3 Defining Stress	193
4 Previous Literature	195
4.1 Stress Literature	195
4.2 Literature on Multitasking	196
4.3 Gender Aspects	197
5 Model	199
6 Sample , i	201
7 Some Preliminary Investigations on the Amount of Stress and Multitasking	203
8 Econometric Methods	214
9 Results	217
10 Conclusions	224
Appendix 1. Probit Estimates for Feeling of General Rush by Gender	226
Appendix 2 Probit Estimates for Feeling Rush in Recording Day by Gender	227
References	228
