

Management, Control and Evolution of IP Networks

Edited by
Guy Pujolle

C

Table of Contents

Part 1. Control of JP Networks	1
Chapter 1. Introduction	3
Guy PUJOLLE	
1.1. Introduction	3
1.2. Signaling	4
1.2.1. Signaling operation	5
1.2.2. Signaling for security	6
1.2.3. Signaling for mobility management	6
1.2.4. Signaling for network flow management	6
1.3. Flow control and management techniques	7
1.3.1. Flow control techniques	9
1.3.2. Congestion control methods	11
1.3.3. Priority technique	12
1.3.4. Reactive congestion control	13
1.3.5. Rapid resource management	14
1.4. Policy-based management	14
1.5. Security	15
1.5.1. General overview of security elements	16
1.6. Mobile network control	18
1.7. Optical network control	19
1.8. Conclusion	20
1.9. Bibliography	20
Chapter 2. Quality of Service: The Basics	23
Benott CAM.PEDEL	
2.1. Introduction to Quality of Service	23
2.1.1. WhyQoS?	23
2.1.2. The needs	24
2.1.3. Definition	25
2.1.4. The concerns	25
2.2. Network parameters	27
2.2.1. Availability	27

2.2.2. Bandwidth	29
2.2.3. Delay.	31
2.2.4. Jitter.	33
2.2.5. Loss ratio.	35
2.3. Overview of the basic mechanisms on IP.	36
2.3.1. Standard router.	37
2.3.2. QoS router.	38
2.3.3. Classification.	39
2.3.4. Policing and marking.	40
2.3.5. Queue management.	43
2.3.6. Sequencing.	45
2.4. Overview.	47
Chapter 3. Quality of Service: Mechanisms and Protocols.	49
Stephane LOHIER	
3.1. QoS and IP.	49
3.1.1. The stack of IP protocols.	49
3.1.2. The IPv4 TOS field	50
3.1.3. QoS on IPv6.	52
3.1.4. Processing in routers.	54
3.2. intServ (RSVP) model.	54
3.2.1. Principle.	54
3.2.2. IntServ services.	56
3.2.3. How an IntServ router works	56
3.2.4. The RSVP protocol.	57
3.2.5. The disadvantages of IntServ	64
3.3. The DiffServ model	64
3.3.1. Principle	64
3.3.2. Architecture	66
3.3.3. Service classes.	68
3.3.4. DiffServ advantages and disadvantages.	70
3.4. MPLS architecture	71
3.4.1. Principle	71
3.4.2. MPLS label and classes	72
3.4.3. MPLS routes.	73
3.5. QoS at level 2.	75
3.5.1. QoS with ATM.	75
3.5.2. QoS with Ethernet	76
3.5.3. QoS with wireless networks	77
Chapter 4. DiffServ: Differentiated Quality of Service.	81
IdirFODIL	
4.1. Introduction	81
4.2. Principles of DiffServ.	82
4.3. Structure.	83
4.3.1..PHB.(PerHop Behavior).	83
4.3.2. EF Service	83
4.3.3. AF Service.	84

4.4. DiffServ in edge routers	84
4.4.1. Data part	85
4.5. Conclusion	88
4.6. Bibliography	88

Chapter 5. Quality of Service in Wi-Fi 91

Yacine GHAMRI-DOUDANE, Anelise MUNARETTO and Hakima CHAOUCHI

5.1. Introduction	91
5.2. Packets transmission with CSMA/CA access method	92
5.2.1. Performance degradation	94
5.2.2. Support for speed changes	94
5.3. MAC level QoS in IEEE 802.11	96
5.3.1. History	96
5.3.2. Distributed approaches	97
5.3.3. Centralized approaches	104
5.4. Summary and conclusion	108
5.5. Bibliography	109

Chapter 6. Quality of Service: Policy-based Management 111

Thi Mai Trang NGUYEN

6.1. Introduction to policy-based management ¹ in IP networks	111
6.2. Architecture and protocols for policy-based management	113
6.3. TheCOPS protocol	114
6.4. COPS-RSVP	117
6.5. COPS-PR	119
6.6. SNMP	123
6.7. Conclusion	124
6.8. Bibliography	124

Chapter 7. Inter-domain Quality of Service 127

Mauro FONSECA

7.1. Introduction	127
7.2. Goals	128
7.3. Motivations for the use of mobile agents to offer inter-domain QoS	131
7.3.1. Control of inter-domain QoS parameters	131
7.4. Negotiation of inter-domain QoS	133
7.4.1. Inter-domain SLA	134
7.5. An architecture for inter-domain negotiation	135
7.5.1. Mobile agent advantages	135
7.5.2. Interaction protocol between the client and the ISP	138
7.5.3. Interaction protocol between two ISPs	140
7.5.4. Generation of policy rules	144
7.6. Conclusion	147
7.7. Bibliography	148

Part 2. The Evolution of IP Networks	151
Chapter 8. An Introduction to the Evolution in the World of IP	153
GuyPUJOLLE	
8.1. Introduction	153
8.2. Great evolutions	154
8.3. Quality of Service	156
8.4. IP mobility	157
8.4.1. Mobile IP	157
8.4.2. Micromobility protocols	160
8.4.3. Video and voice transmissions in mobile environments	162
8.5. IP multicast	162
8.6. VPN IP	164
8.6.1. IP level VPN	165
8.6.2. MPLS VPN	166
8.7. Filtering	168
8.8. Intelligent IP networks	170
8.9. Conclusion	171
8.10. Bibliography	171
Chapter 9. IPv6, the New Internet Generation	175
Idir FODIL	
9.1. Introduction	175
9.2. IPv6 characteristics	176
9.3. IPv6 packet header	177
9.3.1. Extension headers	177
9.4. IPv6 addressing	178
9.4.1. Address format	178
9.4.2. Address types	178
9.4.3. Address configuration	181
9.5. Transition from IPv4 Internet to IPv6 Internet	181
9.5.1. Double pile	182
9.5.2. Encapsulation	183
9.5.3. NAT-PT translation mechanisms	189
9.5.4. Conclusion	191
Chapter 10. Addressing in IP Networks	193
JulienROTROUandJuiienRIDOLTX	
10.1. Introduction	193
10.2. IPv4 addressing	194
10.2.1. Classful IP addressing	194
10.2.2. Subnetting	197
10.2.3. VLSM and CIDR	199
10.3. The future version of the IP protocol: IPv6	203
10.3.1. Differences and comparisons between IPv4 and IPv6	203
10.3.2. IPv6 address representation	204
10.3.3. IPv6 address types	207
10.3.4. Interface identifier and IPv6 address	213

10.4. Conclusion	215
10.5. Bibliography.	216
Chapter 11. SLA Driven Network Management	219
Issam A1B and Belkacem DAHEB	
11.1. Introduction	219
11.2. Requirements for service driven management.. . . .	219
11.2.1. SLA and QoS.	220
11.2.2. SLA and policy-based management (PBM).	220
11.3. The SLA	221
11.3.1. Designation of SLA contracting parties.	223
11.4. Specification of level of service (SLS).	223
11.4.1. Service availability guarantee.	224
11.4.2. Service performance guarantee.	224
11.4.3.. Billing methods.	225
11.4.4. Addressing anomalies.	226
11.5. Service contract chains.	226
11.6. SLA types.	227
11.6.1. Horizontal SLA.	227
11.6.2. Vertical SLA.	227
11.7. SLA management (SLM).	228
11.7.1. An SLA life cycle.	228
11.7.2. End-to-end SLM.	231
11.7.3. Observing the SP's global objectives.	231
11.8. SLA modeling and representation.	231
11.9. Research projects and activities.	233
11.9.1. The TEQUILA project	233
11.9.2. The AQUILA project	234
11.9.3. The CADENUS project	235
11.9.4. The SEQUIN project	236
11.9.5. The EURESCOM project.. . . .	238
11.9.6. The Internet2 - Qbone project	240
11.9.7. The.ARCADe project (ARchitecture for Adaptive Control of IP Environment).	241
11.10. Conclusion	244
11.11. Abbreviations and acronyms.	244
11.12. Bibliography.. . . .	245
Chapter 12. New Approaches for the Management and Control of IP Networks	247
Yacine GHAMRI-DOUDANE	
12.1. Introduction	247
12.2. Network management policies	248
12.2.1. Definition of the term "policy".	248
12.2.2. Objective of policy-based network management	249
12.3. Policy-based management framework	250
12.3.1.'The policy administration console.or tool.. . . .	251
12.3.2. The policy repository.	252
12.3.3. PDP.	253

12.3.4. PEP.	253
12.4. COPS protocol.	254
12.4.1. Segment and COPS message format.	255
12.5. Policy domains.	257
12.5.1. QoS.	257
12.5.2. IP security.	260
12.6. Information modeling.	260
12.6.1. The CIM model.	261
12.6.2. CIM extensions for IP networks.	263
12.7. Conclusion.	263
12.8. Bibliography.	264

Chapter 13. Internet Security. 267
VedatYILMAZ

13.1. Introduction.	267
13.2. Elements of security.	267
13.2.1. Security services.	268
13.2.2. Cryptography.	268
13.2.3. Security mechanisms.	269
13.2.4. Key management issue.	270
13.3. User data security.	270
13.3.1. Application level security.	271
13.3.2. Transport level security.	273
13.3.3. Network level security.	274
13.3.4. Link level security.	275
13.3.5. Physical level security.	277
13.4. Internet infrastructure security.	277
13.4.1. DNS.	278
13.4.2. Routing table.	278
13.4.3. Poor packet processing.	281
13.4.4. Denial of service (DoS).	282
•• 13.5. Internet access infrastructure security.	283
13.5.1. Access control by firewall.	283
13.5.2. Intrusion detection.	286
13.5.3. Viruses.	287
13.6. Summary and conclusion.	289
13.7. Bibliography.	290

Chapter 14. Security Protocols for the Internet. 293
İdirFODİL

14.1. Introduction.	293
14.2. IPSec.	294
14.2.1. Security services.	294
14.2.2. Protection modes.	294
14.2.3. AH (Authentication Header) protocol.	295
14.2.4. ESP protocol (Encapsulated Security Payload).	296
14.2.5. Security parameter management.	297
14.3. IEEE 802.1x.	300

14.3.1. Architecture	300
14.3.2. EAP protocol	301
14.3.3. IEEE 802.lx protocol functioning	303
14.3.4. Conclusion	303
14.4. Bibliography	304

Chapter 15. Secured Infrastructure for Ambient Virtual Offices 307

Laurent CIARLETTA and Abderrahim BENSLIMANE

15.1. Introduction to ambient Internet and to its needs in terms of security	307
15.1.1. Ambient Internet and security	307
15.1.2. Chapter organization	309
15.2. Virtual Private Smart Spaces (VPSS)	309
15.2.1. VPSS context and motivation	309
15.2.2. RBAC	313
15.2.3. VPSS scenarios	314
15.3. An infrastructure secured by ambient virtual offices	315
15.3.1. The application of virtual office	315
15.3.2. General architecture	315
15.3.3. An implementation of network interface access control	316
15.3.4. Prototype infrastructure of network control access	317
15.3.5. Implementation of the solution	319
15.4. Conclusion and perspectives	324
15.4.1. Limitations and future developments	324
15.4.2. Conclusion	326
15.5. Bibliography	326

Chapter 16. Smart Card Security 329

Vincent GUYOT

16.1. Introduction	329
16.2. History	330
16.3. Different parts of a smart card	330
16.3.1. The chip	330
16.3.2. The plastic card	332
16.3.3. The external module	332
16.4. Smart card communication	333
16.4.1. A low-level communication protocol	333
16.4.2. Higher level communication protocols	335
16.4.3. Different readers	336
16.4.4. An autonomous card	337
16.4.5. The software	337
16.5. A secure component	339
16.5.1. A single entity	339
16.5.2. Physical attacks	339
16.5.3. Countermeasures	339
16.6. Smart card alternatives	340
16.6.1. Magnetic cards	340
16.6.2. Cryptographic tokens	340
16.6.3. USB memory cards	341

16.7. Smart card security advantages.	341
16.7.1. Cryptographic concepts.	342
16.7.2. Authentication.	343
16.7.3. Confidentiality.	345
16.7.4. Integrity.	346
16.7.5. Random numbers.	346
16.8. Network security.	347
16.8.1. Authenticated data.	347
16.8.2. High level communication protocols.	347
16.8.3. Program execution in hostile environments.	348
16.8.4. Wi-Fi network authentication.	348
16.9. Conclusion	349
16.10. Bibliography.	349
Chapter 17. Video Adaptation on the Internet	353
Nadjib ACHIR	;
17.1. Introduction.	353
17.2. Error control	355
17.2.1. ARQ approach.	355
17.2.2. The forward error correction approach.	355
17.2.3. The hierarchical or priority FEC approach.	357
17.2.4. The hybrid FEC/ARQ approach	358
17.3. Point-to-point congestion and flow control	359
17.4. Multicast congestion and flow control	362
17.4.1. Multicast transmission by information replication.	363
17.4.2. Cumulative multi-layer multicast transmission.	364
17.4.3. Non-cumulative multi-layer multicast transmission.	366
17.4.4. Other multicast video transmission methods.	367
17.5. An example of video adaptation: multi-object video transmission.	367
17.5.1. Modeling multi-object video quality.	369
17.5.2. Unequal multi-object video protection.	372
17.5.3. Adaptation results and performances.	374
17.6. Conclusion.	377
17.7. Bibliography.	378
Chapter 18. Voice over IP.	383
Guy PUJOLLE	
18.1. Introduction.	383
18.2. Telephonic application in an IP context	384
18.3. Audio coders	385
18.4. Telephony over IP.	387
18.5. Signaling protocols.	389
18.5.1. SIP.	390
18.5.2. H.323.	399
18.6. QoS.	400
18.6.1. Network level control.	400
18.6.2. Application level control: RTP/RTCP.	410
18.7. Corporate IP telephony networks	412

18.8. Implementation of telephony over IP.	413
18.9. Telephonic IP applications for the general public.	414
18.10. Telephony-data integration.	414
18.11. Conclusion.	415
18.12. Bibliography.	415
Chapter 19. Wireless Voice over IP.	417
Laurent OUAKIL	
19.1. Introduction.	417
19.2. Wireless VoIP problems.	418
19.2.1. Definition and principle of wireless VoIP.	418
19.2.2. Voice constraints.	419
19.2.3. Wireless transmission constraints.	420
19.3. Voice management indications and designs.	421
19.3.1. H. 323 protocol.	421
19.3.2. SIP.	423
19.3.3. Comparison between H.323 and SIP.	426
19.3.4. MGCP.	427
19.3.5. Flow transport	427
19.4. Adapting wireless QoS for voice.	428
19.4.1. Managing end-to-end QoS.	429
19.4.2. Managing QoS in the MAC layer	431
19.5. Conclusion.	438
19.6. Bibliography.	439
Part3. The Next Generation of IP Networks	441
Chapter 20. Pervasive Networks.	443
Sidi-Mohammed SENOUCI	
20.1. Introduction.	443
20.2. Ambient intelligence.	444
20.2.1. Problems related to research in ambient intelligence.	446
20.3. Ambient networks.	447
20.3.1. Wireless links.	449
20.3.2. Ad hoc networks.	453
20.3.3. Sensor networks.	455
20.3.4. Interoperability between ambient networks.	457
20.3.5. Service discovery.	462
20.4. Conclusion	465
20.5. Bibliography.	465
Chapter 21. Wi-Fi/IEEE 802.11.	469
Denis BEAUTIER	
21.1. Introduction.	469
21.1.1. The origin.	469
21.1.2. Context.	470
21.1.3. Topology.	471
21.1.4. Hardware.	472

21.2. Technology.	472
• 21.2.1. List of protocols containing IEEE 802.11.	472
21.2.2. Radio transmission techniques of the physical layer.	473
21.2.3. Sub-layer MAC protocols	475
21.2.4. Frame structure	484
21.2.5. Proposed services.	487
21.3. Amendments, progress and characteristics.	488
21.3.1. Security (amendment i)	489
21.3.2. Quality of service (amendment e).	491
21.3.3. Mobility (handover), amendments.	492
21.3.4. Throughputs (amendments g and n).	493
21.4. Conclusion	494
21.4.1. Uses.	494
21.4.2. Currently ./	495
21.4.3. Currently being studied.	496
21.4.4. The future	496
21.5. Appendices	497
21.5.1. Appendix A: Web references.	497
21.5.2. Appendix B: amendments to IEEE 802.11 standard.	497
21.6. Bibliography.	499

Chapter 22. Mobility and Quality of Service 501

Hakima CHAOUCHi

22.1. Introduction.	501
22.2. Summary of QoS and mobility architectures	502
22.2.1. QoS architectures	502
22.2.2. QoS in brief	502
22.2.3. IntServ/RSVP architecture	503
22.2.4. DiffServ architecture	506
22.2.5. Other QoS architectures.	507
22.3. Mobility architectures.	509
22.3.1. Mobility overview.	509
22.3.2. Macro mobility support.	510
22.3.3. Micro mobility support	511
22.3.4. Proxy-based architectures.	512
22.3.5. Localized routing modification-based architecture.	513
22.3.6. Multicast architectures.	515
22.4. Impact of mobility on QoS	516
22.4.1. Network topology impact	516
22.4.2. Macro mobility impact	517
22.4.3. Micro mobility impact	518
22.5. Interaction architectures between QoS and mobility.	519
22.6. Band interactions.	519
22.6.1. Admission and priority control.	519
22.6.2. Resource reservation at the end of the handover.	520
22.6.3. Resource reservation during handover.	520
22.6.4. Resource reservation at the same time as handover.	522
22.6.5. Resource reservation in advance	522
22.6.6. Context transfer.	524

22.7. Interaction with band signaling: INSIGNIA	525
22.8. Other communities.	526
22.9. Conclusion	527
22.10. Bibliography.	528

Chapter 23. Sensor Networks 531

Paulo GONCALVES

23.1. Introduction	531
23.2. Definitions	533
23.2.1. Sensor	533
23.2.2. Observer.	534
23.2.3. Phenomenon	534
23.2.4. Sensor network	534
23.2.5. Sensor network models	535
23.3. Transmission medium	535
23.4. Platforms	536
23.4.1. Mica Motes	537
23.4.2. MIT uAMPS	537
23.4.3. PicoNodes	538
23.4.4. Rockwell WINS	538
23.5. Energy consumption	539
23.6. Power supply.	540
23.6.1. Energy reservoirs	540
23.6.2. Microbatteries.	540
23.6.3. Micro fuel cells	541
23.6.4. Atomic micro-energy.	542
23.6.5. Energy extracted from the environment	542
23.7. Evaluation metrics	543
23.7.1. Energy and lifetime of the network	543
23.7.2. Delay and precision	544
23.7.3. Robustness against outages	544
23.7.4. Scalability.	544
23.8. Network protocols	544
23.9. Auto-organization.	546
23.10. Applications.	547
23.10.1. Military.	547
23.10.2. Environment	547
23.10.3. Surveillance and rescue	548
23.10.4. Artificial conscience	548
23.10.5. Home automation	548
23.11. IEEE 802.15.4 standard or ZigBee™.	549
23.12. Production cost	549
23.13. Conclusion.	549
23.14. Bibliography.	549

Chapter 24. Mobile Ad Hoc Networks: Inter-vehicle Geocast	553
Abderrahim BENSLIMANE	
24.1. Introduction	553
24.2. Mobile ad hoc networks	555
24.3. Communication in intelligent transport	557
24.3.1. Role-based multicast (RBM)	557
24.3.2. Detection of lanes (Trade) and Distance Defer Time (DDT)	558
24.4. Inter-vehicle geocast	559
24.4.1. Context	559
24.4.2. Protocol description	560
24.4.3. Rebroadcast period for a relay	563
24.5. Performance evaluation	565
24.5.1. Network load	565
24.5.2. Simulation	566
24.6. Conclusion	570
24.7. Bibliography	571
24.8. Appendix	573
Chapter 25. Pervasive Networks: Today and Tomorrow	575
Guy PUJOLLE	
25.1. Introduction	575
25.2. Networks of the pervasive Internet	576
25.3. QoS and security	586
25.4. Services	587
25.5. Bibliography	590
Chapter 26. Optical Networks	591
Nizar BOUABDALLAH	
26.1. Introduction	591
26.2. History	592
26.3. Evolution of optical networks	594
26.4. Structure of an optical transmission system	596
26.5. Multiplexing techniques	598
26.6. Second generation, optical networks	600
26.7. Wavelength switching optical networks	601
26.8. Distribution by optical fiber	604
26.8.1. Passive optical network	605
26.8.2. Super PON	606
26.8.3. Ethernet PON	606
26.8.4. Possible evolution with PONs	606
26.9. Conclusion	609
26.10. Bibliography	609

Chapter 27. GMPLS-enabled Optical Networks 611

Wissam FAWAZ and Belkacem DAHEB

27.1. Introduction. 611

27.2. Label switching (MPLS). 612

27.2.1. Introduction. 612

27.2.2. Packet switching networks and MPLS. 613

27.2.3. MPLS network operation. 613

27.2.4. MPLS extensions 621

27.2.5. Conclusion. 621

27.3. Evolution of IP/MPLS signaling for optical WDM networks. 622

27.3.1. WDM technology. 622

27.3.2. An effective optical layer. 623

27.3.3. Centralized control of optical networks. 625

27.3.4. Distributed control optical networks. 628

27.3.5. MPAS. 630

27.4. Conclusion 636

27.5. Bibliography. 636

List of Authors 637
