Preface xiii

1 Introduction 1
- 1.1 Scientific Research . . . 2
- 1.2 Origin of Statistical Power . . . 4
- 1.3 Some Preliminaries . . . 5
  - 1.3.1 Distribution . . . 6
  - 1.3.2 Expectation . . . 13
  - 1.3.3 Variance . . . 15

2 Statistical Power 17
- 2.1 Hypothesis Testing . . . 17
- 2.2 Statistical Power . . . 21
  - 2.2.1 Statistical Power of a z-test . . . 21
  - 2.2.2 Effect Size . . . 27
  - 2.2.3 Sample Size . . . 30
- 2.3 Statistical Power and Sample Size for t Tests . . . 32
  - 2.3.1 One Sample t Test . . . 33
  - 2.3.2 Two Sample Independent t Test . . . 36
  - 2.3.3 Dependent t Test . . . 43
  - 2.3.4 Uncertainty in Power Analysis . . . 50

3 Power of Confidence Interval **55**
3.1 Sample Size and Confidence Interval in a z-test 56
3.2 Sample Size and Confidence Interval in a *t* Test 57
3.3 Statistical Power and Confidence Interval 61
3.3.1 Statistical Power and Confidence Interval Width in a z-test 62
3.3.2 Statistical Power and Confidence Interval Width in a *t* Test 64
3.4 Derivation of π_1 and ω 71

4 Analysis of Variance **75**
4.1 One-way Analysis of Variance 75
4.1.1 Non-centrality Parameter in ANOVA 77
4.1.2 Statistical Power for the *F* Test 81
4.1.3 Statistical Power for Contrast Tests 85
4.2 Two-way Analysis of Variance 92
4.2.1 Statistical Power for Testing Main Effects 92
4.2.2 Statistical Power for Testing Interaction 97
4.3 Random-effects ANOVA 104

5 Linear Regression **111**
5.1 Simple Regression 112
5.2 Testing Correlation *r* 119
5.3 Multiple Regression 123
5.4 Analysis of Covariance 129
5.4.1 Statistical Power with Covariate Adjustment 129
5.4.2 Small Sample Size and Standard Error with Covariate Adjustment 133

6 Multivariate Analysis **137**
6.1 Hotelling T^2 for Two-group Comparison 137
6.2 Multivariate Analysis of Variance 145
6.3 Multivariate Analysis of Covariance 159

7 Multi-level Models **169**
7.1 Cluster Randomized Trials 170
7.1.1 Two Treatment Arms 170
7.1.2 Three Treatment Arms 178

7.2 Multi-site Randomized Trials 191
7.2.1 Two Treatment Conditions at Each Site 191
7.2.2 Multiple Treatment Conditions at Each Site 200
7.2.3 Derivation of the F Statistic 212

8 Complex Multi-level Models **215**
8.1 Three-level Cluster Randomized Trial 215
8.2 Multi-site Cluster Randomized Trial 224
8.3 Covariate Adjustment 235
8.4 Optimal Sample Allocation 243
8.4.1 Cluster Randomized Trial 244
8.4.2 Multi-site Randomized Trial 247
8.4.3 Unequal Costs Per Unit of Randomization 249

9 Meta-analysis **253**
9.1 Fixed-Effects Meta-analysis 254
9.1.1 Test for Main Effect 254
9.1.2 Test for Homogeneity of Individual Effect Sizes . . . 259
9.2 Random-Effects Meta-analysis 260
9.2.1 Test for Main Effect 260
9.2.2 Test for the Variance of Individual Effect Sizes 266

10 Structural Equation Models **269**
10.1 Path Analysis 270
10.1.1 Statistical Power for Testing Individual Equations and Direct Effects 272
10.1.2 Statistical Power in Path Analysis 273
10.2 Factor Analysis 286
10.3 Structural Equation Model 289
10.3.1 Statistical Power in SEM 291

11 Longitudinal Studies **299**
11.1 Multivariate Analysis of Repeated Measures 300
11.1.1 Linear Change 300
11.1.2 Quadratic Change 308
11.2 HLM: Fixed Coefficient for Slope 315
11.3 HLM: Random Coefficients Model 324
11.3.1 Linear Change 325

11.3.2 Quadratic Change 331
11.3.3 Orthogonal Polynomial Model 339
11.3.4 Cubic Change 343

Appendix A Cumulative Distribution Function **347**
A.1 Cumulative Distribution Function and Quantile 347
A.2 Non-central Cumulative Distribution Function 348

Appendix B R Tutorial **351**
B.1 Arithmetic 351
B.2 Data 353
B.3 Loop 354
B.4 Statistics 355
B.5 Simulation 357
B.6 Graphics 359
B.7 Function 360
B.8 Statistical Analysis 361
B.8.1 Basic Statistics 361
B.8.2 Helmert Contrast 362

Bibliography **365**

Index **373**
