The Impact of Automatic Store Replenishment Systems on Retail

DISSERTATION
of the University of St. Gallen
Graduate School of Business Administration,
Economics, Law and Social Sciences (HSG)
to obtain the title of
Doctor of Business Administration

submitted by
Alfred Angerer
from
Austria

Approved on the application of

Prof. Dr. Daniel Corsten
and
Prof. Fritz Fahrni, PhD

Dissertation no. 3123

Deutscher Universitäts-Verlag, 2006

Table of Contents

1. Introduction 1

1.1. Logistics Contribution to Retail Excellence 1
1.2. Excellence in Store Operations 3
1.3. New Technologies Enable Automatic Store Replenishment Systems 6
1.4. Research Deficit 8
1.5. Research Questions 12
1.6. Thesis Structure 14

2. Research Framework and Design 16

2.1. Research Framework 16
2.2. Research Methodology 18
2.3. Research Process 23

3. Literature Research 26

3.1. Inventory Management Perspective 26
3.1.1. Optimization in Inventory Management Research 27
3.1.2. Theoretical Sources on OOS 28
3.1.3. Contributions and Deficits of an Inventory Management Perspective 29
3.2. Logistics and Operations Management Perspective 30
3.2.1. Supply Chain Management and ECR 31
3.2.2. Automatic Replenishment Programmes 33
3.2.3. Operations Management in Retail 39
3.2.4. Contributions and Deficits of a Logistics and Operations Management Perspective 40
3.3. Business Information Systems Perspective 41
3.3.1. Characteristics of ERP Systems 42
3.3.2. ERP Implementation and Selection 42
3.3.3. ERP and Human Agency 44
3.3.4. Contributions and Deficits of a Business Information Systems Perspective 46
3.4. Contingency Theory Perspective 47
3.4.1. Contingency Theory at the Organizational Level 47
3.4.2. Contingency Theory on Information Technology and Processes 49
3.4.3. Contributions and Deficits of a Contingency Perspective 50
3.5. Literature Research Overview 51

4. Development of Models 53

4.1. A Descriptive Model of Replenishment Systems 53
4.1.1. Inventory Visibility 56
4.1.2. Replenishment Logic 57
4.1.3. Order Restrictions 60
4.1.4. Forecasts 61
4.2. Classification of Automatic Replenishment Systems 64
4.3. Explanatory Model 68
4.3.1. Purpose and Structure of the Explanatory Model 68
4.3.2. Hypothesis Development: Product Characteristics 71
4.3.3. Hypothesis Development: Store Characteristics 77

4.3.4. Hypothesis Development: ASR Characteristics 81

5. Quantitative Analysis 85

5.1. Sample and Methodology 85
5.1.1. Dataset1: Testing of Out-of-Stock Hypotheses 85
5.1.2. Dataset2: Pretest/Posttest Analysis 93
5.2. Hypothesis Testing: Dataset1 99
5.2.1. Influence of Product Characteristics 99
5.2.2. Influence of Store Characteristics 113
5.3. Dataset2: Pretest/Posttest 122
5.4. Quantitative Research–Conclusions 128

6. Field Research and Managerial Implications 132

6.1. Research Sample 132
6.1.1. Company Selection 132
6.1.2. Market Characteristics 134
6.1.3. Supply Chain Structure 134
6.1.4. Chains and Store Formats 136
6.1.5. Delivery Frequency and Order-to-Deliver Lead Times 136
6.2. Replenishment Processes 137
6.2.1. Inventory Visibility 138
6.2.2. Forecasts and Replenishment Logic 146
6.2.3. Order Restrictions 151
6.3. Organizational Changes and Personnel Issues 151
6.3.1. Structural Changes and Setup 152
6.3.2. Personnel and Change Management 154
6.4. ASR Performance 157
6.4.1. Performance Measurement 157
6.4.2. Inventory Level Performance 158
6.4.3. OOS Reduction and Overall Performance 159
6.5. Lessons Learned and Recommendations for Management 161
6.5.1. The Adequate Automation Level: Recommendations 161
6.5.2. ASR Introduction 165
6.5.3. Technical and Organizational Requirements 166
6.5.4. Store Operations: Recommended Action 170
6.5.5. Cost-Benefit Analyses 175

7. Conclusion 181

7.1. Theoretical Contributions 181
7.2. Contribution for Practitioners 183
7.3. Further Research Fields 186

8. Appendix and References 189

8.1. Statistical Appendix 189
8.1.1. Calculation of the Inventory Level 189
8.1.2. ANOVA Considerations and Prerequisites 191
8.2. References 193
8.3. List of Interviews 210
