Preface | ' **xv**

Part I. View of the Landscape

I Expectations and the Learning Approach 5
1.1 Expectations in Macroeconomics 5
1.2 Two Examples 8
1.3 Classical Models of Expectation Formation 9
1-4 Learning: The New View of Expectations , 12
1.5 Statistical Approach to Learning 15
1.6 A Genera] Framework 16
1.7 Overview of the Book 19

2 Introduction to the Techniques 25
2.1 Introduction 25
2.2. The Cobweb Model 26
2.3 Econometric Learning 27
2.4 Expectational Stability 30
2.5 Rational vs. Reasonable Learning 32
2.6 Recursive Least Squares 32
2,7 Convergence of Stochastic Recursive Algorithms 34
2.8 Application to the Cobweb Model 37
2.9 The E-StabiUty Principle 39
2.10 Discussion of the Literature .•- 43

3 Variations on a Theme **45**
3.1 Introduction 45
3.2 Heterogeneous Expectations 45
3.3 Learning with Constant Gain 48
3.4 Learning.in Nonstochastic Models 50
3.5 Stochastic Gradient Learning 55
3.6 Learning with Misspecification 56

4 Applications **59**
4.1 Introduction 59
4.2 The Overlapping Generations Model 60
4.3 A Linear Stochastic Macroeconomic Model 63
4.4 The Ramsey Model 68
4.5 The Diamond Growth Model 71
4.6 A Model with Increasing Social Returns 72
4.7 Other Models 81
4.8 Appendix 82

Part II. Mathematical Background and Tools

5 The Mathematical Background **87**
5.1 Introduction 87
5.2 Difference Equations 88
5.3 Differential Equations 93
5.4 Linear Stochastic Processes 99
5.5 Markov Processes 108
5.6 Ito Processes 110
5.7 Appendix on Matrix Algebra 115
5.8 References for Mathematical Background 118

6 Tools: Stochastic Approximation **121**
6.1 Introduction 121
6.2 Stochastic Recursive Algorithms 123
6.3 Convergence: The Basic Results 128
6.4 Convergence: Further Discussion 134
6.5 Instability Results 138
6.6 Expectational Stability 140
6.7 Global Convergence 144

7 Further Topics in Stochastic Approximation 147
7.1 Introduction 147
7.2 Algorithms for Nonstochastic Frameworks 148
7.3 The Case of Markovian State Dynamics 154
7.4 Convergence Results for Constant-Gain Algorithms 162
7.5 Gaussian Approximation for Cases of Decreasing Gain 166
7.6 Global Convergence on Compact Domains 167
7.7 Guide to the Technical Literature 169

Part III. Learning in Linear Models

8 Univariate Linear Models 173
8.1 Introduction 173
8.2 A Special Case • 174
8.3 E-Stability and Least Squares Learning: MSV Solutions 179
8.4 E-Stability and Learning: The Full Class of Solutions 183
8.5 Extension 1: Lagged Endogenous Variables 193
8.6 Extension 2: Models with Time-r Dating 198
8.7 Conclusions 204

9 Further Topics in Linear Models 205
9.1 Introduction 205
9.2 Muth's Inventory Model 205
9.3 Overparameterization in the Special Case 206
9.4 Extended Special Case 211
9.5 Linear Model with Two Forward Leads 215
9.6 Learning Explosive Solutions 219
9.7 Bubbles in Asset Prices 220
9.8 Heterogeneous Learning Rules 223

10 Multivariate Linear Models 227
10.1 Introduction 227
10.2 MSV Solutions and Learning 229
10.3 Models with Contemporaneous Expectations 236 •
10.4 Real Business Cycle Model 239
10.5 Irregular REE 243
10.6 Conclusions 249
10.7 Appendix 1: Linearizations 249
10.8 Appendix 2: Solution Techniques .252

Part IV. Learning in Nonlinear Models

11 Nonlinear Models: Steady States **267**
11.1 Introduction 267
11.2 Equilibria underPerfect Foresight 269
11.3 Noisy Steady States 269
11.4 Adaptive Learning for Steady States 273
11.5 E-Stability and Learning 273
11.6 Applications 276

12 Cycles and Sunspot Equilibria **287**
12.1 Introduction 287
12.2 Overview of Results 288
12.3 Deterministic Cycles 291
12.4 Noisy Cycles 293
12.5 Existence of Sunspot Equilibria 300
12.6 Learning SSEs 304
12.7 Global Analysis of Learning Dynamics 310
12.8 Conclusions 313

Part V. Further Topics

13 Misspecification and Learning **317**
13.1 Learning in Misspecified Models 317
13.2 Misspecified,Policy Learning 325
13.3 Conclusions 329

14 Persistent Learning Dynamics **331**
14.1 Introduction 331
14.2 Constant-Gain Learning in the Cobweb Model 333
14.3 Increasing Social Returns and Endogenous Fluctuations 337
14.4 Sargent's Inflation Model 348
14:5 Other Models with Persistent Dynamics 356
14.6 Conclusions 359

15 Extensions and Other Approaches **361**
15.1 Models.from Computational Intelligence 361
15.2 Alternative.Gain Sequences 370
15.3 Nonparametric Learning 372
15.4 Eductive Learning 372

15.5 • Calculation Equilibria 376
15.6 Adaptively Rational Expectations Equilibria 378
15.7 Experimental Work 380
15.8 Some Empirical Applications 382

16 Conclusions 385

Bibliography 389
