Management Summary
1 Motivation and Aim of the Study
2 What are the Central Properties of Cyber Risk?
2.1 Definition of Cyber Risk
2.2 Statistical Information on Cyber Risk
2.3 Market for Cyber Insurance
2.4 Insurability of Cyber Risk
2.5 Derivation of the Central Properties
3 What Options for Risk Transfer do Exist?
3.1 Risk Owner
3.2 Primary Insurer
3.3 Reinsurance
3.4 Capital Markets
3.5 Governments
4 Analysis of the Risk Transfer Options
4.1 Motivation
4.2 Model
4.2.1 Expected Utility Framework
4.2.2 Definition of Risk Layers
4.2.3 Definition of Scenarios
4.3 Results in the Reference Model
4.3.1 Parameter Summary for the Reference Model
4.3.2 Reference Model
4.3.3 Scenario Analysis in the Reference Model
4.4 Sensitivity in the Reference Model
4.4.1 Correlation in the Portfolio
4.4.2 Size of Portfolios
4.4.3 Additional Parameter Variations
4.5 Extensions in the Reference Model
4.5.1 Analysis of Different Reinsurance Contracts _
4.5.2 Alternative Pricing Approaches
4.5.3 Impact of Self-protection Measures
4.5.4 Impact of Company Size
4.6 Ways to Improve Insurability
4.6.1 Impact of a Pool Solution
4.6.2 Impact of Governmental Intervention
4.7 Key Results of the Expected Utility Analysis
5 Derivation of Implications
5.1 Introduction of an Insurance Pool

5.2 Improving the Role of the Government 116
5.3 Top Five Measures to Improve the Insurability of Cyber Risk 121
6 Survey among Market Participants 124
6.1 Data Collection and Descriptive Statistics 124
6.2 Cyber Risk and Cyber Insurance: Where do we stand? 126
6.3 Ways to Improve Insurability of Cyber Risk 129
6.4 Summary of Key Results 132
7 Conclusion 133
