

Economic dynamics in Dutch construction

(Economische dynamiek in de Nederlandse bouwnijverheid)

PROEFSCHRIFT

ter verkrijging van de graad van doctor aan de
Erasmus Universiteit Rotterdam op gezag van de

Rector Magnificus

Prof. dr P.W.C. Akkermans M.A.

en volgens het besluit van het college voor promoties

De openbare verdediging zal plaatsvinden op
vrijdag 23 juni 2000 om 16.00 uur

door

Gerbert Romijn
aeboren te Gorinchem

Contents

1	Introduction	1
1.1	The economy, real estate markets and construction: theoretical considerations of the stock-adjustment model	2
1.1.1	Concepts and markets of the stock-adjustment model	3
1.1.2	The formal model	5
1.1.3	Dynamics	7
1.2	Applications of the stock adjustment model to real estate	10
1.2.1	The construction equation	11
1.2.2	Empirical dynamics	20
	<i>Residual dynamics</i>	20
	<i>Partial adjustment and lag structures</i>	21
	<i>Vector autoregressions and construction</i>	22
	<i>The construction lag</i>	23
1.2.3	The market for real estate services	24
	<i>Demand for housing services</i>	24
	<i>Office space</i>	25
1.2.4	Real estate asset markets	26
	<i>The cost of financing real estate investment</i>	27
	<i>Real estate asset market price formation</i>	28
	<i>The role of mortgages</i>	29
1.3	Dissertation structure	31
2	A brief economic history of construction in the Netherlands	35
2.1	Growth and construction: a long run perspective	35
2.1.1	The broad sweeps of government involvement	37
	<i>Housing policy</i>	37

<i>Government policy and corporate sector investment in non-residential buildings</i>	39
<i>Government investment</i>	40
<i>Constraints to policy</i>	41
2.1.2 Long run economic growth and investment	42
2.1.3 Investment, construction and growth	45
<i>Civil & hydraulic engineering and housing</i>	46
<i>Non-residential buildings</i>	46
2.2 The construction industry after 1969	48
2.2.1 1969-1973: Grace under pressure	49
2.2.2 1974-1983: The long road down	51
<i>The first oil crisis?</i>	51
<i>Recovery?</i>	54
<i>Free</i> <i>fall</i>	57
2.2.3 1984-1990: Recovery	59
<i>The macroeconomy</i>	59
<i>Wage moderation</i>	61
<i>Construction</i>	63
2.2.4 1991-1997: A new equilibrium?	67
<i>Macroeconomic developments</i>	68
<i>Residential construction</i>	71
2.3 Prices, costs and profitability	74
2.3.1 The cost structure	74
<i>The cost of intermediate consumption</i>	74
<i>Labour cost</i>	76
<i>Property and entrepreneurial income, capital rewards and profits</i>	77
2.3.2 Prices and costs	79
2.4 Conclusion	80
Measuring the dynamics of construction	81
3.1 A simple model of construction industry production	85
3.2 The estimation of dynamic common factors in vector time series	87
3.2.1 Common features and vector autoregressions	88
3.2.2 Estimation of the dynamic common factors	90
3.2.3 Test statistics for the determination of the dimension of the co-feature space	92
3.3 Common dynamics of construction industry sub-sector output	93

3.3.1 Estimation of the industry sub-sector production dynamic common factors	93
3.3.2 The dynamic common factors	96
3.4 Conclusion	99
3. A The relation between the time series process of the dynamic common factors and the time series process of the observed variables	100
3 .B The inverse of the matrix of eigenvectors	101
Economic developments and the level of construction	103
4.1 The data and its properties	105
4.1.1 The data	105
4.1.2 Integrating and co-integrating properties of the data	107
4.2 The empirical methodology	108
4.2.1 Modelling methodology	108
4.2.2 Estimating VARs	109
4.3 Estimation results for the interaction between the construction industry and the macroeconomy	110
4.4 Structural analysis	112
4.4.1 Construction industry production	114
<i>Causation patterns</i>	114
<i>Impulse responses</i>	117
4.4.2 The price mechanism	118
4.4.3 The construction industry wage rate	120
4.4.4 The role of the macroeconomic variables	122
<i>Gross National Income</i>	122
<i>Plant & equipment investment</i>	123
<i>The long run interest rate</i>	126
4.5 Dynamic responses of the construction industry sub-sector production volumes	126
4.5.1 General observations	127
4.5.2 Construction industry sub-sector responses	127
<i>A shock in the construction industry output price</i>	127
<i>A shock in the construction industry wage rate</i>	128
<i>A shock in the long run interest rate</i>	128
<i>A shock in plant & equipment investment</i>	128
<i>A shock in gross national income</i>	130
4.6 Conclusion	130
4.A Restricted fully modified VAR estimation	134

5	Wages and productivity in Dutch construction	137
5.1	Wages, employment and value added in the Dutch construction sector	141
5.2	Empirical analysis of the wage-productivity relation	142
5.2.1	Specification of the VECM	144
5.2.2	The long run equilibrium relation	146
5.2.3	Short run dynamics	148
5.3	Conclusion	152
6	Lump sum moving cost and aggregate demand dynamics in real estate markets	155
6.1	The model	158
6.1.1	The micro-model	158
	<i>The Value Function</i>	160
	<i>Optimal control band policy parameters</i>	162
6.1.2	Aggregate demand for real estate services	163
6.1.3	Discretisation and interpretation	166
6.2	Lump sum moving costs and aggregate demand for office space	169
6.2.1	Time series for Dutch office space use and business conditions	171
6.2.2	Desired office space use	172
6.2.3	The micro-model coefficients	177
6.2.4	Aggregate office space use	178
6.3	Lump sum moving costs and aggregate consumption of housing services	181
6.3.1	The consumption of housing services in The Netherlands	181
	<i>The price of housing services</i>	182
	<i>Household income, consumption and the consumption of housing services</i>	184
	<i>The housing stock, quality and the supply of housing services</i>	187
6.3.2	Aggregate desired housing services consumption	189
6.3.3	The micro-model parameters for housing consumption	191
6.3.4	Implications of relocation cost for aggregate consumption of housing services	192
6.4	Discussion and conclusion	193
6. A	The steady state distribution of a (j, d) Brownian motion in a (s, S, Q) control band	197
7	Office space in the Netherlands, 1974-1995	199
7.1	Available data for the Dutch office market	200
7.2	VGM and CBS data: comparability and lower bounds of observation	203

7.3	Calculation of office space building permits 1974-1981	205
7.4	Building permits and construction of office space	209
7.5	Towards consistent data for office space in the Netherlands	211
7.6	Discussion and conclusion	214
8	Summary and conclusion	219
8.1	Preliminaries	219
8.2	Mapping the economic dynamics of construction	221
8.3	Wages, real estate services and office space	224
8.4	What have we learned?	227
	Nederlandse samenvatting (Summary in Dutch)	229
	Bibliography	241
