

AN INTRODUCTION TO MODERN BAYESIAN ECONOMETRICS

Contents

| | |
|---|-----------|
| <i>Preface</i> | xii |
| <i>Introduction</i> | xiii |
| | |
| The Bayesian Algorithm | 1 |
| 1.1 Econometric Analysis | 1 |
| 1.2 Statistical Analysis | 2 |
| 1.3 Bayes' Theorem | 3 |
| 1.3.1 Parameters and data | 8 |
| 1.3.2 The Bayesian algorithm | 9 |
| 1.4 The Components of Bayes' Theorem | 10 |
| 1.4.1 The likelihood $p(y 0)$ | 10 |
| 1.4.2 The prior $p(0)$ | 29 |
| 1.4.3 The posterior $p(d y)$ | 41 |
| 1.4.4 Decisions | 56 |
| 1.5 Conclusion and Summary | x |
| 1.6 Exercises and Complements | 58 |
| 1.7 Appendix to Chapter 1: Some Probability Distributions | 64 |
| 1.8 Bibliographic Notes | 67 |
| | |
| Prediction and Model Criticism | 70 |
| 2.1 Methods of Model Checking | 71 |
| 2.2 Informal Model Checks | 72 |
| 2.2.1 Residual QQ plots | 73 |
| 2.3 Uncheckable Beliefs? | 77 |
| 2.4 Formal Model Checks | 79 |
| 2.4.1 Predictive distributions | 79 |
| 2.4.2 The prior predictive distribution | 79 |

| | | |
|-------|---|-----|
| 2.4.3 | Using the prior predictive distribution to check your model | 82 |
| 2.4.4 | Improper prior predictive distributions | 84 |
| 2.4.5 | Prediction from training samples | 84 |
| 2.5 | Posterior Prediction | 88 |
| 2.5.1 | Posterior model checking | 90 |
| 2.5.2 | Sampling the predictive distribution | 91 |
| 2.6 | Posterior Odds and Model Choice | 97 |
| 2.6.1 | Two approximations to Bayes factors | 100 |
| 2.6.2 | Model averaging | 101 |
| 2.7 | Enlarging the Model | 102 |
| 2.8 | Summary | 106 |
| 2.9 | Exercises | 107 |
| 2.10 | Bibliographic Notes | 111 |
| | | |
| 3 | Linear Regression Models | 112 |
| 3.1 | Introduction | 112 |
| 3.2 | Economists and Regression Models | 112 |
| 3.2.1 | Mean independence | 114 |
| 3.3 | Linear Regression Models | 114 |
| 3.3.1 | Independent, normal, homoscedastic errors | 116 |
| 3.3.2 | Vague prior beliefs about P and T | 120 |
| 3.3.3 | The two marginals under a vague prior | 123 |
| 3.3.4 | Highest posterior density intervals and regions | 125 |
| 3.3.5 | The least squares line | 130 |
| 3.3.6 | Informative prior beliefs | 133 |
| 3.3.7 | Sampling the posterior density of j_8 | 134 |
| 3.3.8 | An approximate joint posterior distribution | 135 |
| 3.4 | A Multinomial Approach to Linear Regression | 141 |
| 3.4.1 | Comments on the multinomial approach | 146 |
| 3.5 | Checking the Normal Linear Model | 147 |
| 3.6 | Extending the Normal Linear Model | 152 |
| 3.6.1 | Criticizing the gasoline model | 152 |
| 3.6.2 | Generalizing the error distribution | 158 |
| 3.6.3 | Model choice | 168 |
| 3.7 | Conclusion and Summary of the Argument | 171 |
| 3.8 | Appendix to Chapter 3 | 172 |
| 3.8.1 | Analytical results in the normal linear model | 172 |
| 3.8.2 | Simulating dirichlet variates | 175 |
| 3.8.3 | Some probability distributions | 177 |
| 3.9 | Exercises and Complements | 180 |
| 3.10 | Bibliographic Notes | 181 |

| | |
|---|------------|
| 4 Bayesian Calculations | 183 |
| 4.1 Normal Approximations | 186 |
| 4.2 Exact Sampling in One Step | 188 |
| 4.2.1 Rejection sampling | 188 |
| 4.2.2 Inverting the distribution function | 190 |
| 4.3 Markov Chain Monte Carlo | 192 |
| 4.3.1 Markov chains and transition kernels | 192 |
| 4.3.2 The state distribution, $p_t(x)$ | 194 |
| 4.3.3 Stationary distributions | 195 |
| 4.3.4 Finding the stationary distribution given a kernel | 195 |
| 4.3.5 Finite discrete chains | 199 |
| 4.3.6 More general chains | 201 |
| 4.3.7 Convergence | 203 |
| 4.3.8 Ergodicity | 204 |
| 4.3.9 Speed | 205 |
| 4.3.10 Finding kernels with a given stationary distribution | 206 |
| 4.4 Two General Methods of Constructing Kernels | 207 |
| 4.4.1 The Gibbs Sampler | 207 |
| 4.4.2 The Metropolis method | 212 |
| 4.4.3 Metropolis-Hastings | 214 |
| 4.4.4 Practical convergence | 215 |
| 4.4.5 Using samples from the posterior | 217 |
| 4.4.6 Calculating the prior predictive density | 221 |
| 4.4.7 Implementing markov chain monte carlo | 222 |
| 4.5 Conclusion | 224 |
| 4.6 Exercises and Complements | 224 |
| 4.7 Bibliographic Notes | 226 |
| | |
| 5 Non-linear Regression Models | 227 |
| 5.1 Estimation of Production Functions | 227 |
| 5.1.1 Criticisms of this model | 230 |
| 5.2 Binary Choice | 231 |
| 5.2.1 Probit likelihoods | 232 |
| 5.2.2 Criticisms of the probit model | 234 |
| 5.2.3 Other models for binary choice | 234 |
| 5.3 Ordered Multinomial Choice | 236 |
| 5.3.1 Data augmentation | 238 |
| 5.3.2 Parameters of interest | 238 |
| 5.4 Multinomial Choice | 239 |
| 5.5 Tobit Models | 240 |
| 5.5.1 Censored linear models | 240 |
| 5.5.2 Censoring and truncation | 240 |
| 5.5.3 Selection models | 244 |

| | | |
|--------|---|-----|
| 5.6 | Count Data | 246 |
| 5.6.1 | Unmeasured heterogeneity in non-linear regression | 247 |
| 5.6.2 | Time series of counts | 250 |
| 5.7 | Duration Data | 251 |
| 5.7.1 | Exponential durations | 253 |
| 5.7.2 | Weibull durations | 254 |
| 5.7.3 | Piecewise constant hazards | 255 |
| 5.7.4 | Heterogeneous duration models | 255 |
| 5.8 | Concluding Remarks | 256 |
| 5.9 | Exercises | 257 |
| 5.10 | Appendix to Chapter 5: Some Further Distributions | 258 |
| 5.10.1 | The lognormal family | 258 |
| 5.10.2 | Truncated normal distributions | 258 |
| 5.10.3 | The poisson family | 260 |
| 5.10.4 | The heterogeneous poisson or negative binomial family | 260 |
| 5.10.5 | The weibull family | 261 |
| 5.11 | Bibliographic Notes | 263 |
| 6 | Randomized, Controlled, and Observational Data | 265 |
| 6.1 | Introduction | 265 |
| 6.2 | Designed Experiments | 266 |
| 6.2.1 | Randomization | 266 |
| 6.2.2 | Controlled experimentation | 267 |
| 6.2.3 | Randomization and control in economics | 268 |
| 6.2.4 | Exogeneity and endogeneity in economics | 269 |
| 6.3 | Simpson's Paradox | 272 |
| 6.4 | Conclusions | 275 |
| 6.5 | Appendix to Chapter 6: Koopmans' Views on Exogeneity | 275 |
| 6.6 | Bibliographic Notes | 275 |
| 7 | Models for Panel Data | 277 |
| 7.1 | Panel Data | 277 |
| 7.2 | How Do Panels Help? | 278 |
| 7.3 | Linear Models on Panel Data | 281 |
| 7.3.1 | Likelihood | 282 |
| 7.3.2 | A uniform prior on the individual effects | 284 |
| 7.3.3 | Exact sampling | 291 |
| 7.3.4 | A hierarchical prior | 291 |
| 7.3.5 | BUGS program | 293 |
| 7.3.6 | Shrinkage | 294 |
| 7.3.7 | A richer prior for the individual effects | 295 |

| | | |
|----------|--|------------|
| 7.4 | Panel Counts | 296 |
| 7.4.1 | A uniform prior on the individual effects | 297 |
| 7.4.2 | A gamma prior for the individual effects | 299 |
| 7.4.3 | Calculation in the panel count model | 300 |
| 7.5 | Panel Duration Data | 300 |
| 7.6 | Panel Binary Data | 302 |
| 7.6.1 | Parameters of interest | 303 |
| 7.6.2 | Choices of prior | 303 |
| 7.6.3 | Orthogonal reparametrizations | 305 |
| 7.6.4 | Implementation of the model | 306 |
| 7.7 | Concluding Remarks | 308 |
| 7.8 | Exercises | 308 |
| 7.9 | Bibliographic Notes | 309 |
| 8 | Instrumental Variables | 311 |
| 8.1 | Introduction | 311 |
| 8.2 | Randomizers and Instruments | 311 |
| 8.3 | Models and Instrumental Variables | 312 |
| 8.4 | The Structure of a Recursive Equations Model | 315 |
| 8.4.1 | Identification | 316 |
| 8.5 | Inference in a Recursive System | 317 |
| 8.5.1 | Likelihood surfaces with weak instruments | 318 |
| 8.6 | A Numerical Study of Inference with Instrumental Variables | 320 |
| 8.6.1 | Generating data for a simulation study | 321 |
| 8.6.2 | A BUGS model statement | 321 |
| 8.6.3 | Simulation results | 322 |
| 8.7 | An Application of IV Methods to Wages and Education | 325 |
| 8.7.1 | Is education endogenous? | 332 |
| 8.8 | Simultaneous Equations | 335 |
| 8.8.1 | Likelihood identification | 338 |
| 8.8.2 | Inference in simultaneous equations models | 339 |
| 8.9 | Concluding Remarks About Instrumental Variables | 340 |
| 8.10 | Bibliographic Notes | 341 |
| 9 | Some Time Series Models | 342 |
| 9.1 | First Order Autoregression | 342 |
| 9.1.1 | Likelihoods and priors | 346 |
| 9.1.2 | BUGS implementation | 349 |
| 9.1.3 | Some calculations | 350 |
| 9.2 | Stochastic Volatility | 354 |
| 9.3 | Extensions | 356 |
| 9.4 | Exercises | 356 |
| 9.5 | Bibliographic Notes | 357 |

| | |
|---|------------|
| Appendix 1: A Conversion Manual | 359 |
| A1.1 The Frequentist Approach | 359 |
| A1.2 The Bayesian Contrast | 361 |
| | |
| Appendix 2: Programming | 365 |
| A2.1 S | 365 |
| A2.2 WinBUGS | 367 |
| A2.2.1 Formulating the model and inputting data from within BUGS | 368 |
| A2.2.2 Running the sampler | 370 |
| A2.2.3 Running BUGS from R | 372 |
| A2.2.4 Special likelihoods and the ones trick | 373 |
| A2.2.5 Computing references | 373 |
| | |
| Appendix 3: BUGS Code | 375 |
| A3.1 Normal Linear Model | 375 |
| A3.2 Heteroscedastic Regression | 375 |
| A3.3 Regression with Autocorrelated Errors | 376 |
| A3.4 CES Production Function | 376 |
| A3.5 Probit Model | 377 |
| A3.6 Tobit Model | 377 |
| A3.7 Truncated Normal | 378 |
| A3.8 Ordered Probit | 378 |
| A3.9 Poisson Regression | 379 |
| A3.10 Heterogeneous Poisson Regression | 379 |
| A3.11 Right Censored Weibull Data | 379 |
| A3.12 A Censored Heterogeneous Weibull Model | 380 |
| A3.13 An Over-identified Recursive Equations Model | 380 |
| A3.14 A Just Identified Simultaneous Equations Model | 381 |
| A3.15 A Panel Data Linear Model | 381 |
| A3.16 A Second Order Autoregression | 382 |
| A3.17 Stochastic Volatility | 382 |
| | |
