List of Figures	xv
List of Tables	xvii
Contributing Authors	xxi
Foreword	xxv
Acknowledgments	xxvii
Introduction	xxix
<i>Anna Alberini and Riccardo Scarpa</i>	
1. Background and motivation	xxix
2. Heterogeneity in discrete choice models	xxx
3. Bayesian applications	xxxii
4. Simulation methods in dynamic models	xxxiii
5. Monte Carlo experiments	xxxiv
6. Computational aspects	xxxv
7. Terminology	xxxvi
1	
Discrete Choice Models in Preference Space and <i>Willing-to-pay</i> Space	1
<i>Kenneth Train and Melvyn Weeks</i>	
1. Introduction	2
2. Specification	4
3. Data -	6
4. Estimation	7
4.1 Uncorrelated coefficients in preference space	7
4.2 Uncorrelated <i>WTP</i> 's in <i>WTP</i> space	11
4.3 Correlated coefficients and <i>WTP</i>	14
5. Conclusions	16
2	
Using Classical Simulation-Based Estimators to Estimate Individual <i>WTP</i> Values	17
<i>William H. Greene, David A. Hensher and John M. Rose</i>	
1. Introduction	18

2.	The Bayesian approach	19
3.	The Mixed Logit Model	21
4.	An Empirical Example	24
4.1	Stated Choice Experimental Design	25
4.2	Findings	27
4.3	WTP Derived from Individual Parameters	30
4.4	WTP Derived from Population Moments	31
5.	Conclusions	32
3		
	In the Cost of Power Outages to Heterogeneous Households	35
	<i>David F. Layton and Klaus Moeltner</i>	
1.	Introduction	36
2.	Approaches to Estimating Residential Outage Costs	37
3.	The Econometric Model	39
4.	Empirical Analysis	42
4.1	Data	42
4.2	Model Estimation	43
4.3	Outage Attributes	45
4.4	Household Characteristics	48
4.5	Past Outage History	48
4.6	Covariance Parameters	51
4.7	Comparison with Previous Estimates	51
5.	Discussion and Conclusion	53
4		
	Capturing Correlation and Taste Heterogeneity with Mixed GEV Models	55
	<i>Stephane Hess, Michel Bierlaire, John W. Polak</i>	
1.	Introduction	56
2.	Methodology	57
2.1	Closed-form GEV models	58
2.2	Mixed GEV models	59
3.	Empirical analysis	62
3.1	Multinomial logit model	65
3.2	Nested Logit model	65
3.3	Cross-Nested Logit model	65
3.4	Mixed Multinomial Logit model	68
3.5	Mixed Nested Logit model	71
3.6	Mixed Cross-Nested Logit model	72
4.	Summary and Conclusions	73
5		
	Analysis of Agri-Environmental Payment Programs	77
	<i>Joseph Cooper</i>	
1.	Introduction	77
2.	The Theoretical Model	79
3.	Econometric Model	80

<i>Contents</i>	ix
4. Numerical Illustration	84
5. Conclusion	94
6	
A Comparison between Multinomial Logit and Probit Models	97
<i>Andreas Ziegler</i>	
1. Introduction	98
2. Methodological Approach and Variables	99
2.1 Background on Determinants of Environmental Performance	99
2.2 Multinomial Discrete Choice Models	100
2.3 Dependent and Explanatory Variables	103
3. Data	105
4. Results	106
4.1 Multinomial Logit and Independent Probit Analysis	106
4.2 Flexible Multinomial Probit Analysis	108
5. Conclusions	115
7	
Mixed Logit with Bounded Distributions of Correlated Partworths	117
<i>Kenneth Train and Garrett Sonnier</i>	
1. Introduction	118
2. Mixed logit with normally distributed partworths	121
3. Transformation of normals	124
4. Application	125
4.1 Choice experiments	126
4.2 Models	127
8	
Kuhn-Tucker Demand System Approaches to Non-Market Valuation	135
<i>Roger H. von Haefen, Daniel J. Phaneuf</i>	
1. Introduction	136
2. Modeling framework and challenges	137
vi 3. Empirical specifications and implementation strategies	140
3.1 Fixed and random parameter classical estimation approaches	141
3.2 Random parameter Bayesian estimation approaches	144
3.3 Welfare analysis	146
3.4 Simulating the unobserved heterogeneity	147
3.5 Calculating CS^H	148
3.6 Our welfare calculation approach: a restatement	151
4. Empirical illustration	151
5. Results	153
5.1 Parameter estimates	153
5.2 Welfare estimates	155
6. Discussion	156
9	
Hierarchical Analysis of Production Efficiency	159
in a Coastal Trawl Fishery	

Garth Holloway, David Tomberlin, Xavier Irz

1.	Introduction	160
2.	Coastal fisheries efficiency measurement	163
2.1	Why measure technical efficiency in fisheries?	163
2.2	Modelling Technical Efficiency	163
2.3	What have we learned?	166
3.	Bayesian composed error model development	168
3.1	Composed Error Frontier Model With Exponential Inefficiency	169
3.2	Gibbs sampling the composed error model	171
3.3	Composed-error models comparison	175
3.4	Truncated-normal, panel data estimation	177
3.5	Estimation in a two-layer hierarchy	179
4.	Empirical evidence from the Pacific Coast Groundfish Fishery	180
5.	Data	182
6.	Results	183
7.	Conclusions and Extensions	184

10

Bayesian Approaches to Modeling Stated Preference Data	187
--	-----

David F. Layton and Richard A. Levine

1.	Introduction	188
2.	The Econometric Model and Bayesian Estimation Approach	189
2.1	Model Specification	190
2.2	Bayesian Estimation	191
2.3	Model Comparison and Marginal Likelihood Computation	194
3.	The Stated Preference Data Sets	196
4.	Results	197
5.	Conclusion	203
6.	Appendix A	204
7.	Appendix B	205

11

Bayesian Estimation of Dichotomous Choice Contingent Valuation with Follow-up	209
---	-----

Jorge E. Arana , Carmelo J. Leon

1.	Introduction	210
2.	Modeling	211
3.	Application and results	215
4.	Conclusions	220
5.	Appendix	221

12

Modeling Elicitation Effects in Contingent Valuation Studies	223
--	-----

Margarita Genius and Elisabetta Strazzera

1.	Introduction	223
----	--------------	-----

<i>Contents</i>	xi
-----------------	----

2.	Behavioral hypotheses	225
3.	Bivariate Models	227
4.	Experimental Design	230
5.	Results	234
6.	Conclusions	245

13		
Performance of Error Component Models for Status-quo Effects in Choice Experiments		247

Riccardo Scarpa, Silvia Ferrini and Kenneth Willis

1.	Introduction	248
2.	Motivation for the study	250
2.1	The nature of SQ effects	250
2.2	SQ effects in choice experiments	251
3.	Econometric specifications accounting for SQ and their rationale	253
3.1	Common notation	253
3.2	Conditional logits with and without SQ-Asc	253
3.3	Nested logit	255
3.4	Error components via mixed logit	256
3.5	Estimation issues	258
4.	The Yorkshire Water choice modelling studies	258
4.1	Study 1	259
4.2	Study 2	259
4.3	Sampling method	259
5.	Results and discussion	261
5.1	Estimates for study 1	261
5.2	Estimates for study 2	262
6.	Monte Carlo experiments	264
6.1	Monte Carlo Design	264
6.2	Monte Carlo Results	266
7.	Conclusions	267

14		
DPSIM Modelling: Dynamic Optimization in Large Scale Simulation Models		275
<i>Richard T. Woodward, Wade L. Griffin and Yong-Suhk Wui</i>		

1.	Introduction	276
2.	The need for and difficulty of dynamic optimization	277
3.	Two approaches to DPSim modelling	279
4.	An empirical application of DPSim analysis: The Gulf of Mexico Red Snapper Fishery	282
4.1	The policy setting	282
4.2	The simulation model: GBFSM	283
4.3	Solving the DP problem: The direct method	284
4.4	Solving the DP problem: The meta-modelling approach	286
5.	Results	287
6.	Conclusions	292

15

An Exposition of Structural Estimation of Discrete Dynamic Decision Processes	295
<i>Bill Provencher and Kenneth A. Baerenklau</i>	

1. Introduction	295
2. Structural Estimation of a Discrete Dynamic Decision Problem	297
3. The Brazee-Mendelsohn Timber Harvest Problem	300
3.1 Some Numerical Results Illustrating the Model	303
4. Comments on Reduced Form Estimation	309
5. The Future of Structural Estimation	314

16

Monte Carlo Methods in Environmental Economics	317
<i>Giovanni Baiocchi</i>	

1. Introduction to Monte Carlo Methods	317
2. Monte Carlo Methods in Environmental Economics	320
3. Designing A Monte Carlo Study	322
4. Reproducibility of Monte Carlo Results	325
5. Reporting Monte Carlo Results	327
6. Random Number Generation	328
7. Quality of Random Number Generators	331
7.1 Theoretical Arguments: Period Length	331
7.2 Empirical Support	332
8. Practical Issues	335
9. Testing the Random Number Generators	336
10. Conclusion	339

17

Gaussian Quadrature versus Simulation for the Estimation of Random Parameters	341
<i>William S. Breffle, Edward Morey and Donald Waldman</i>	

1. Introduction	342
2. A choice model with random parameters	342
3. Simulation	343
4. Gaussian-Hermite quadrature	344
5. An application: Green Bay fishing under different conditions	347
6. Conclusions	349

18

Simulation Noise and the Estimation of Land Use Decisions in Kenya	355
<i>John McPeak</i>	

1. Introduction	356
2. Empirical Analysis of Land-Use Decisions	358
3. FIMSL Estimation of a Bivariate TOBIT	361
4. Simulation of Estimation Results	367
5. Discussion and "conclusion"	371
