Preface	xx
I Basic Regression Theory	1
1 The Linear Regression Model	3
1.1 The Model	3
1.2 The Least Squares Estimator	4
1.2.1 Derivation of the Estimator	4
1.2.2 Goodness of Fit	6
1.2.3 The Projection Matrices	6
1.2.4 Linear Transformations	7
1.2.5 The Partitioned Linear Model	8
1.3 The Statistical Model	9
1.4 Model Specification	12
1.4.1 Linearity	12
1.4.2 Included Variables	13
1.4.3 Relevant Variables	15
2 Statistical Analysis of the Regression Model	17
2.1 Statistical Assumptions	17
2.2 The Properties of OLS	18
2.2.1 Mean and Variance	18
2.2.2 The Residuals	20
2.2.3 The Gauss–Markov Theorem	20
2.3 Generalized Least Squares	23
2.3.1 Failure of the Assumptions	23
2.3.2 Aitken’s Theorem	24
2.3.3 Interpreting Residual Autocorrelation	25
2.4 The Gaussian Linear Model	26

2.4.1	Interval Estimation	26
2.4.2	Testing Hypotheses	28
2.4.3	The F Test of Linear Restrictions	28
2.4.4	The Constrained Estimation Approach	29
2.4.5	Significance Tests	30
2.5	Stability Analysis	32
2.5.1	Structural Breaks	32
2.5.2	Prediction	33
3	Asymptotic Analysis of the Regression Model	37
3.1	Stochastic Convergence	37
3.1.1	Modes of Convergence	37
3.1.2	Related Results	39
3.2	The Law of Large Numbers	40
3.2.1	Independent Sequences	40
3.2.2	Chebyshev's Theorem	42
3.3	The Central Limit Theorem	43
3.3.1	The i.i.d. Case	43
3.3.2	Heterogeneous Data	44
3.3.3	Vector Sequences	46
3.4	Asymptotic Estimation Theory	46
3.5	Asymptotics of the Stochastic Regressor Model	48
3.5.1	Assumptions	48
3.5.2	Consistency	49
3.5.3	Asymptotic Normality	49
3.5.4	A Common Pitfall	50
3.5.5	Asymptotic Test Criteria	51
3.6	Linear CAN Estimators and Asymptotic Efficiency	52
3.6.1	The Linear CAN Class	52
3.6.2	The Instrumental Variables Class	53

II Dynamic Regression Theory **57**

4	Modelling Economic Time Series	59
4.1	Data Generation Processes	59
4.1.1	DGPs and Models	60
4.1.2	Nonstochastic Time Variation	61
4.1.3	General Distributions	61
4.2	The VAR(1) Process	62
4.2.1	The Gaussian DGP	63
4.2.2	The Structural Form	63
4.2.3	Example: A Simple Keynesian Model	64
4.3	Distribution of the VAR Process	65
4.3.1	Stability Conditions	66
4.3.2	The Mean and Variance	66

4.3.3	The Sample Density	67
4.3.4	Higher Order Dynamics	68
4.4	Sequence Properties	69
4.4.1	Stationarity	69
4.4.2	Mixing	70
4.4.3	Ergodicity	71
4.5	Marginalizing, Conditioning and Exogeneity	71
4.5.1	Conditioning Variables	71
4.5.2	Factorization of the Density	72
4.5.3	Parameters of Interest and Weak Exogeneity	74
4.5.4	Granger Causality and Strong Exogeneity	75
4.5.5	A Bivariate Example	75
4.5.6	Exogeneity and Regression	77
4.5.7	Other Notions of Exogeneity	78
4.6	The General Conditional Model	79
4.7	Structural Change	80
4.7.1	Observational Equivalence	80
4.7.2	Super-exogeneity	81
5	Principles of Dynamic Modelling	84
5.1	The Lag Operator	84
5.1.1	Definition	84
5.1.2	Inverting Lag Polynomials	85
5.1.3	The General Case	86
5.2	Autoregressive and Moving Average Dynamic Structures	87
5.2.1	Innovation Processes	87
5.2.2	The ARMA Process	89
5.2.3	The Wold Decomposition	90
5.2.4	Linear Processes	91
5.2.5	Autocovariance Analysis	92
5.2.6	Representing the MA(q) Process	93
5.2.7	Integrated Processes	94
5.2.8	Vector Autoregressions	96
5.2.9	The Simple Keynesian Model Again	98
5.3	Dynamic Regression Models	99
5.3.1	The General ARMADL Model	99
5.3.2	The Autoregressive Distributed Lag Model	100
5.3.3	Common Factors	100
5.3.4	Rational Lags	101
5.3.5	Polynomial Distributed Lags	101
5.3.6	The Error Correction Model	102
5.4	Models of Dynamic Behaviour	103
5.4.1	The Partial Adjustment Model	103
5.4.2	Adaptive Expectations	105
5.4.3	Stock Adjustment	106
5.5	Rational Expectations Models	107

5.5.1	The ARMA(1,1) Process	108
5.5.2	A System with Lagged Expectations	109
5.5.3	Systems with Current Expectations	109
5.5.4	Dynamic Optimization	110
5.6	Conditional Heteroscedasticity	113
5.7	Appendix: Proof of Theorem 5.2.1	116
6	Asymptotics for Dynamic Models	119
6.1	The Simple Autoregressive Model	119
6.2	Martingale Difference Processes	121
6.2.1	Definitions	121
6.2.2	Properties	122
6.2.3	Limit Results	123
6.3	Properties of the Autoregression	124
6.3.1	Consistency	124
6.3.2	Finite Sample Bias	127
6.3.3	Asymptotic Distribution	128
6.4	Mixing and Near-Epoch Dependence	129
6.4.1	Basic Concepts	129
6.4.2	Application to the AR(1)	131
6.4.3	Properties and Limit Results	132
6.5	Application: the Misspecified AR(1)	134
6.5.1	Consistency	135
6.5.2	Asymptotic Normality	136
6.6	Appendix: Additional Proofs	137
7	Estimation and Testing	140
7.1	The Dynamic Regression Model	140
7.1.1	The Setup	140
7.1.2	Consistency	142
7.1.3	Asymptotic Normality	143
7.1.4	A VAR Application	144
7.1.5	Asymptotic Efficiency	146
7.2	Extensions of the Basic Model	147
7.2.1	Dummy Regressors	147
7.2.2	Global Nonstationarity	148
7.3	Consequences of Misspecification	151
7.3.1	Misspecification in Mean	151
7.3.2	Misspecification in Variance	152
7.4	The Model Selection Problem	153
7.4.1	Spurious Regression	153
7.4.2	Data Coherency and Theory Consistency	154
7.5	Model-Building Methodology	155
7.5.1	Variable Addition/Deletion Tests	156
7.5.2	Significance Tests and Diagnostic Tests	157
7.5.3	Encompassing and Non-Nested Testing	158

7.6	Diagnostic Tests	160
7.6.1	Residual Autocorrelation	160
7.6.2	The Durbin–Watson Test	161
7.6.3	The Q test	162
7.6.4	Unrestricted Dynamics	162
7.6.5	Parameter Stability	162
7.6.6	Nonlinear Functional Form	163
7.6.7	Conditional Heteroscedasticity	163
7.6.8	ARCH Effects	164
7.6.9	Non-normality	164
7.7	Modelling Strategies	165
7.7.1	Testing Up vs Testing Down	165
7.7.2	Significance Levels in Multiple Tests	166
7.7.3	Data Mining	167
7.8	Appendix: Pitfalls With Autocorrelation Testing	169
8	Simultaneous Equations	172
8.1	The Consumption Model Revisited	172
8.1.1	Statistical Assumptions	172
8.1.2	Estimation with Instrumental Variables	173
8.1.3	Testing Exogeneity	174
8.2	Estimating Simultaneous Equations	176
8.2.1	Structural and Reduced Forms	176
8.2.2	Setup and Notation	177
8.2.3	Two-stage Least Squares	178
8.2.4	Asymptotic Properties of 2SLS	180
8.2.5	Asymptotic Efficiency of 2SLS	183
8.3	The Rank Condition for Identification	185
8.4	Testing the IV Specification	188
8.4.1	More on Testing Exogeneity	188
8.4.2	Testing Overidentifying Restrictions	190
8.5	Nonlinear Simultaneous Equations	191
8.5.1	Fisher’s Identification Analysis	191
8.5.2	Example	193
8.5.3	Kelejian’s Approach	194

III Advanced Estimation Theory **197**

9	Optimization Estimators I: Theory	199
9.1	Preliminaries	199
9.2	Numerical Optimization	202
9.2.1	Line Search	203
9.2.2	Gradient Methods for Multivariate Optimization	205
9.2.3	Quasi-Newton Methods	208
9.2.4	Direct Search Methods	210

9.2.5	Practical Implementation	212
9.3	Asymptotic Properties	213
9.3.1	Existence of OEs	213
9.3.2	Consistency	215
9.3.3	Identification	217
9.3.4	Asymptotic Normality	219
9.4	Other Issues	221
9.4.1	Model Selection	221
9.4.2	Two-step Estimation	224
9.4.3	Estimation of Covariance Matrices	226
9.5	Appendix: Additional Proofs	229
10	Optimization Estimators II: Examples	234
10.1	Linear Least Squares	234
10.2	Nonlinear Least Squares	235
10.2.1	Computation	236
10.2.2	Asymptotic Properties	236
10.2.3	The AR(1) Error Model: Computation	238
10.2.4	The AR(1) Error Model: Asymptotics	240
10.2.5	The MA(1) Error Model	243
10.2.6	The Adaptive Expectations/Stock Adjustment Model	243
10.2.7	The Error Correction Model	244
10.3	Generalized Method of Moments	245
10.3.1	Asymptotic Theory	245
10.3.2	A Nonlinear Example	247
10.3.3	Application to Rational Expectations	247
10.3.4	Nonlinear 2SLS	248
10.4	Modelling Second Moments	249
10.4.1	Residual Variance Estimation	249
10.4.2	Conditional Heteroscedasticity and ARCH Models	252
10.5	Misspecified Regression Models	256
10.6	Appendix: Proof of Theorem 10.5.3	260
11	The Method of Maximum Likelihood	262
11.1	Introduction	262
11.2	Examples	264
11.2.1	The Classical Gaussian Regression Model	264
11.2.2	The Stationary Gaussian AR Model	265
11.2.3	The Dynamic Regression Model	267
11.2.4	Conditional Heteroscedasticity	267
11.2.5	Discrete and Censored Data Models	268
11.3	Properties of the MLE	271
11.3.1	Preliminaries	271
11.3.2	Consistency and Identification	272
11.3.3	Asymptotic Normality	274
11.3.4	Model Selection	276

11.3.5	Computational Issues	277
11.3.6	Asymptotic Efficiency	278
11.4	General Distributions	280
12	Testing Hypotheses	283
12.1	Basic Ideas	283
12.1.1	Concepts and Definitions	283
12.1.2	Test Principles	285
12.2	The Wald Test	287
12.3	Tests Based on Constrained Estimation	289
12.3.1	Distribution of the Constrained OE	289
12.3.2	The Likelihood Ratio Test	290
12.3.3	The Lagrange Multiplier Test	292
12.3.4	Testing for Autocorrelation	294
12.3.5	Testing for Heteroscedasticity	296
12.4	Power Calculations	297
12.4.1	Pitman Drift	297
12.4.2	Asymptotic Distributions under H_A	299
12.5	M Tests	301
12.5.1	Theory	301
12.5.2	M Tests for Heteroscedasticity	304
12.5.3	Tests of Functional Form	304
12.5.4	The Information Matrix Test	306
13	System Estimation	308
13.1	Three-stage Least Squares	308
13.1.1	Construction of 3SLS	308
13.1.2	Distribution of 3SLS	311
13.1.3	Special Cases	312
13.2	Full Information Maximum Likelihood	314
13.2.1	Set-up and Computation	314
13.2.2	Properties	315
13.2.3	Least Generalized Variance	317
13.3	Least Generalized Variance Ratio	317
13.3.1	Subsystem Estimation	317
13.3.2	LIML	318
13.3.3	Asymptotic Equivalence of LIML and 2SLS	319
13.4	Nonlinear FIML	321
13.4.1	Preliminaries	321
13.4.2	Computation	322
13.4.3	Consistency of the MLE	323
13.4.4	Quasi-FIML	325
13.5	System GMM	327
13.5.1	The One-stage Estimator	327
13.5.2	The Efficient Case	328
13.5.3	The Two-stage Estimator	330

13.5.4	Nonlinear SUR	332
IV	Cointegration Theory	335
14	Unit Roots	337
14.1	The Random Walk Model	337
14.2	The Probability Background	338
14.2.1	Function Spaces	338
14.2.2	Brownian Motion	340
14.2.3	The Functional CLT	342
14.3	The Unit Root Autoregression	345
14.3.1	Basic Convergence Results	345
14.3.2	Tests of the $I(1)$ Hypothesis	346
14.3.3	Serial Correlation	349
14.3.4	Including an Intercept	351
14.4	Allowing Deterministic Trends	352
14.4.1	Distribution of the AR Coefficient	352
14.4.2	Tests of $I(1)$	354
14.5	Testing the Null of $I(0)$	355
14.6	Appendix: Proof of Theorem 14.3.1	358
15	Cointegrating Regression	360
15.1	Cointegrated Time Series	360
15.1.1	Basic Concepts	360
15.1.2	Cointegrated Equation Systems	361
15.1.3	The VECM Representation	362
15.2	Limit Theory for Cointegrating Regressions	364
15.2.1	Limit Theory Preliminaries	364
15.2.2	Static Least Squares	366
15.2.3	When Static Least Squares is Optimal	369
15.2.4	Including $I(0)$ Regressors	371
15.2.5	The Error Correction Model Approach	375
15.2.6	Fully Modified Least Squares	376
15.3	Testing for Cointegration	378
15.3.1	Regression Without Cointegration	378
15.3.2	Residual-based Tests	379
15.3.3	Correcting for Autocorrelation	381
15.3.4	Drawbacks with Residual-based Tests	382
15.4	Trended Variables	382
15.4.1	Simple Regression	382
15.4.2	Detrending the Data	384
15.4.3	Testing for Cointegration	385
15.5	A Postscript on OE Analysis	386

16 Cointegrated Systems	388
16.1 The VECM Framework	388
16.1.1 Modelling Issues	388
16.1.2 Least Squares Analysis	390
16.2 Johansen's Analysis	391
16.2.1 The General Dynamic Model	391
16.2.2 Reduced Rank Regression	393
16.3 Inference in the Cointegrating VAR	395
16.3.1 Tests for Cointegrating Rank	395
16.3.2 Likelihood Ratio Tests	398
16.3.3 Inference on β	399
16.3.4 The Other Parameters	402
16.4 Allowing Deterministic Trends	403
16.4.1 Modifications to the Analysis	403
16.4.2 The Cointegrating Vectors	405
16.4.3 Restricting and Testing Trends	407
16.4.4 Trends in the Cointegration Space	409
16.5 Partial Models and Exogeneity	410
16.5.1 The Conditional Model	410
16.5.2 Testing Cointegrating Rank	412
16.5.3 Estimating β	413
16.6 Structural Cointegrating Relations	415
16.6.1 Identification	415
16.6.2 Single Equation Analysis	419
16.6.3 System Analysis	421
16.7 Appendix: Additional Proofs	424
V Technical Appendices	427
A Matrix Algebra Basics	429
A.1 Vectors and Matrices	429
A.2 Matrix Inversion	431
A.3 Linear Dependence and Rank	433
A.4 Equation Systems	433
A.5 Eigenvalues and Eigenvectors	434
A.6 Diagonalization of Symmetric Matrices	435
A.7 Definite Matrices	435
A.8 Generalized Inverses	437
A.9 Matrix Calculus	438
A.10 Vecs and Kronecker Products	439

B Probability and Distribution Theory	441
B.1 Set Theory Basics	441
B.2 Probability	442
B.3 Random Variables	443
B.4 Expectations	446
B.5 Joint Distributions	450
B.6 Conditional Expectations	453
B.7 Independence	455
B.8 Random Vectors	456
B.9 Change of Variable	457
B.10 Conditioning on a Sigma-field	458
C The Gaussian Distribution and its Relatives	461
C.1 The Univariate and Multivariate Cases	461
C.2 The Conditional and Marginal Distributions	464
C.3 The Chi-squared, F and t Distributions	465
C.4 Quadratic Forms in Normal Variables	466
