

HANDBOOK OF TRANSPORT SYSTEMS AND TRAFFIC CONTROL

Edited by

KENNETH J. BUTTON
*The School of Public Policy,
George Mason University*

DAVID A. HENSHER
*Institute of Transport Studies,
University of Sydney*

2001

PERGAMON

An Imprint of Elsevier Science

Amsterdam – London – New York – Oxford – Paris – Shannon – Tokyo

CONTENTS

Introduction to the series	v
<i>Chapter 1</i>	
Introduction	
KENNETH J. BUTTON and DAVID A. HENSHER	1
1. Introduction	1
2. What are transport systems?	2
3. Transport systems from the user's perspective	3
4. Transport systems and transport policy	4
5. Traffic control	6
6. The Handbook	7
<i>Chapter 2</i>	
Transport Planning	
DAVID BANISTER	9
1. The three great changes	9
2. The new agenda	11
3. The new challenge	13
4. Into the new millennium	16
References	19
<i>Chapter 3</i>	
Traffic Reduction	21
PHILLIP B. GOODWIN	
1. Introduction: Why did the idea of traffic reduction become important?	21
2. The instruments and objectives of traffic reduction	23
2.1. Town center pedestrianization	23
2.2. Residential-area traffic calming	25
2.3. National parks and tourist attractions	28
2.4. Transport pricing: Parking, fuel taxes, and road user charges	28
2.5. Improvements in alternatives	30
3. Overall assessment	31
References	31

Chapter 4

Equity versus Efficiency in Transport Systems	
CHRIS NASH	33
1. Introduction	33
2. Efficiency versus equity – key concepts	33
3. Transport pricing	38
4. Appraisal	41
5. Transport and social exclusion	42
6. Conclusions	43
References	44

Chapter 5

The Concept of Optimal Transport Systems	
ROGER VICKERMAN	47
1. Introduction	47
2. Optimal networks	48
3. Transport and the efficiency of the economy	51
4. Transport, labor markets and efficient cities	52
5. Transport in a general equilibrium model of the economy	54
6. Implications for appraisal and evaluation of transport investments	56
7. Conclusion	57
References	58

Chapter 6

Economics of Transport Networks	
KENNETH J. BUTTON	61
1. The concept of networks	61
2. Standardization and networks	62
3. Economies of scale, scope, and density	63
4. User benefits and costs	65
5. Hub-and-spoke networks	68
6. Public sector assessment of network investment	71
7. Regulatory issues	73
References	74

Chapter 7

Traffic Congestion and Congestion Pricing	
ROBIN LINDSEY and ERIK VERHOEF	77
1. Introduction	77
2. Congestion pricing in time-independent models	79
3. Congestion pricing in time-dependent models	80

4. Second-best issues in congestion pricing	85
4.1. Networks	86
4.2. Heterogeneity of users	89
4.3. Step tolls	91
4.4. Uncertainty and information provision	91
4.5. Interactions with other economic sectors	93
4.6. Other traffic-related externalities	95
4.7. Congestion pricing by private operators	95
5. Congestion pricing and investment	97
5.1. Networks	99
5.2. Step tolls	99
5.3. Congestion pricing by private operators	99
6. The social and political feasibility of congestion pricing	100
7. Conclusions	102
References	102

*Chapter 8***Modal Diversion**

DAVID A. HENSHER

107

1. Introduction	107
2. The changing context for studying modal diversion	108
3. Representing behavioral responsiveness	110
3.1. Elasticities	110
3.2. Elasticities in the context of passenger activities: An example of ticket choice	111
3.3. Elasticities in the context of freight activity	114
3.4. The calculation of changes in modal shares using a joint mode and parking choice model	115
4. Conclusions	122
References	122

*Chapter 9***Induced Travel and User Benefits: Clarifying Definitions and Measurement for Urban Road Infrastructure**

PETER W. ABELSON and DAVID A. HENSHER

125

1. Introduction	125
2. The meaning of induced travel	126
3. Evidence on induced travel	127
4. The valuation of benefits of induced travel	130
5. Errors in the valuation of induced travel	135
5.1. Evaluating induced travel from modal changes	137
6. Modeling induced travel	138

7. Conclusions	141
References	141
<i>Chapter 10</i>	
Cost-benefit Analysis in Transport	
PETER MACKIE and JOHN NELLTHORP	143
1. Introduction	143
2. Why appraise projects?	143
3. Principles of cost-benefit analysis	145
3.1. Overview	145
3.2. User benefit estimation	148
3.3. Revenues and costs	154
3.4. Values of time and safety	157
3.5. The process	162
4. Challenges in cost-benefit analysis	164
4.1. Extending CBA to the environmental impacts of transport	165
4.2. Wider economic impacts	166
4.3. CBA and frameworks	169
5. Conclusion	172
References	173
<i>Chapter 11</i>	
Transport Subsidies	
WERNER ROTHENGATTER	175
1. Introduction	175
2. Typology of subsidization	176
2.1. Subsidies for the transport sector as defined in SNA statistics	176
2.2. Further direct and open payments of the state to the transport sector	178
2.3. Indirect and hidden subsidies	180
3. Normative reasons for subsidization in the transport sector	183
3.1. Public- or merit-good properties of traded goods and services	184
3.2. Externalities of transport	185
3.3. Risk aversion of investors in the case of sunk costs	188
3.4. Natural monopolies and deficits occurring with pricing/investment strategies in these markets	189
3.5. Redistribution of income	191
4. Positive reasons for subsidization in the transport sector	191
4.1. Normative versus positive economics	191
4.2. Interest groups and stakeholders in the transport sector	192
4.3. Example: The case of aircraft subsidies	195
5. Conclusions	196
References	197

*Chapter 12***Transportation Demand Management**

JONATHAN L. GIFFORD and ODD J. STALEBRINK

199

1. Introduction	199
2. TDM measures	199
2.1. Congestion pricing	200
2.2. Electronic road pricing	201
2.3. Ridesharing	202
2.4. Transit improvements	202
3. TDM objectives	203
4. TDM programs	205
5. The rationale for TDM	205
6. TDM effectiveness	206
7. Historical perspective	207
8. Current issues	207
References	208

*Chapter 13***Infrastructure Capacity**

T.R. LAKSHMANAN and WILLIAM P. ANDERSON

209

1. Introduction and overview	209
2. Infrastructure capacity: Definition and measurement	210
2.1. Highway capacity analysis	213
2.2. Transit capacity analysis	216
2.3. Air travel capacity analysis	218
3. Infrastructure capacity expansion: Alternative approaches	219
3.1. New infrastructure	220
3.2. More effective capacity from current infrastructure	221
3.3. Manipulating infrastructure demand	223
3.4. Promoting public transit	226
3.5. Land use policies and regulations	226
4. Conclusion	226
References	227

*Chapter 14***Transport Safety**

IAN SAVAGE

229

1. Introduction	229
2. Measures of safety	229
3. The transport safety “problem”	231
4. Public policy regarding private automobile driving	235

5. Public policy regarding commercial transport	237
References	240
<i>Chapter 15</i>	
Environmental Protection	
EMILE QUINET and DANIEL SPERLING	241
1. Introduction	241
2. Categories of environmental damage	243
3. Economic tools to cope with environmental damage	244
4. The targets of environmental protection	247
4.1. General transport policy	247
4.2. Infrastructure design	249
4.3. Vehicle design and use	250
5. Conclusion	251
References	254
<i>Chapter 16</i>	
Transportation Systems and Economic Development	
KINGSLEY HAYNES and KENNETH J. BUTTON	255
1. Introduction	255
2. The overview arguments	255
3. Transportation infrastructure and development	257
4. Transportation and regional economic development	259
5. Transportation provision in less developed countries	264
6. Conclusions	267
References	268
<i>Chapter 17</i>	
Bus Services: Deregulation and Privatization (Lessons for Third World Cities)	
ALAN ARMSTRONG-WRIGHT	269
1. Introduction	269
2. The U.K.: Outside London	269
3. London	271
4. Accra, Ghana	272
5. Santiago de Chile	273
6. Kingston, Jamaica	273
7. Hong Kong	274
8. Riga, Latvia	276
9. Nairobi, Kenya	277
10. Lessons	278

10.1. Objectives	278
10.2. The need for some regulation even in a “deregulated system”	279
10.3. Encouraging public transport	279
10.4. Decontrol of fares	280
10.5. Fare evasion	280
10.6. Non-commercial routes	280
10.7. Commercial law	281
10.8. The capacity of the bus industry	281
10.9. Private monopolies	282
10.10. The reliability of services	282
10.11. Multitrip ticketing	282
10.12. Concessionary travel	283
10.13. Privatization process	283
11. Conclusion	284
References	284

Chapter 18

Transportation in Sparsely Populated Regions	
ÅKE E. ANDERSSON	287
1. Introduction	287
2. Sparsely populated regions in developed countries	287
3. The excess capacity problem of sparsely populated regions	288
4. The problem of spatial monopolies	290
5. The importance of accessibility	291
6. Transport quality and optimal maintenance investment	293
7. Transportation investments and regional development	295
References	297

Chapter 19

Biking and Walking: The Position of Non-motorized Transport Modes in Transport Systems	
PIET RIETVELD	299
1. Introduction	299
2. Demand for non-motorized transport modes	302
3. The role of non-motorized transport modes in multimodal transport chains	307
4. Cost comparison of transport modes	309
5. Government policies	311
6. Non-motorized transport modes in developing countries	315
7. Conclusions	317
References	318

*Chapter 20***Traffic Calming**

RAY BRINDLE

	321
1. Scope of this chapter	321
2. Traffic calming in context	321
3. Planning for traffic calming	323
3.1. Local traffic as a planning issue	323
3.2. Neighborhoods as systems	324
3.3. A systematic planning process	326
4. Designing for traffic calming	327
4.1. Creating the preferred traffic character of the street	327
4.2. Selection of street modification treatments	329
4.3. Changing the speed profile of the street	331
4.4. The specific treatments	332
4.5. Designing for special users	332
5. Final comment	333
References	334

*Chapter 21***Specialized Transport**

DAVID GILLINGWATER and NICK TYLER

	335
1. What is “specialized transport”?	335
2. The structure and organization of “specialized transport”	337
3. Case studies of “specialized transport” services	341
3.1. Barnsley Dial-a-Ride and Community Transport	341
3.2. Cumbria Plusbus	342
3.3. Transport co-ordination center in a London borough	343
4. Key issues in “specialized transport” service provision	345
References	348

*Chapter 22***Women and Travel**

LAURIE A. SCHINTLER

	351
1. Introduction	351
2. The responsibilities and needs of women	352
3. Travel activity patterns	353
3.1. Trip purpose	353
3.2. Trip length and frequency	353
3.3. Complex trip-making	354
3.4. Mode choice	354
4. Decision-making and cognitive processes	356

5. Conclusions	356
References	357
<i>Chapter 23</i>	
Cross-border Traffic	
KENNETH J. BUTTON	359
1. Introduction	359
2. Reasons for limiting free cross-border traffic and methods used	360
3. Benefits of freer cross-border traffic movements	362
4. Basic requirements for freer cross-border transportation	363
5. Removing border constraints	364
5.1. The European Union	364
5.2. The North American Free Trade Area	368
6. Conclusions	372
References	372
<i>Chapter 24</i>	
Parking and Traffic Control	
WILLIAM YOUNG	375
1. Introduction	375
2. Parking management	375
2.1. Parking demand	377
2.2. Supply of parking	378
2.3. Pricing	378
2.4. The impacts of parking control	379
2.5. Administration and planning of parking	380
3. Parking information systems	381
3.1. Area control of parking	381
3.2. Advisory signs	382
4. Design of parking systems	383
5. Rural parking	384
6. A case study: Melbourne, Australia	384
7. Concluding remarks	385
References	385
<i>Chapter 25</i>	
Road Vehicle Design Standards	
MICHAEL C. CASE and MAX G. LAY	387
1. Objective of road vehicle design standards	387
2. International design regulations	387
2.1. The origins of design standards	387
2.2. Different standards in different countries	388
2.3. Harmonization of international design standards	389

3. Developing design standards	390
3.1. Scope of vehicle design standards	390
3.2. Identifying the need for a standard	391
3.3. Involvement of key stakeholders	391
4. Enforcement of standards	392
4.1. Legislative support	392
4.2. Type approval systems	392
4.3. Compliance approval for low-volume vehicles	393
4.4. Conformity of production	393
4.5. Vehicle recalls	394
4.6. In-service regulations	394
5. Implications for transport systems	395
5.1. Road safety	395
5.2. Environment	397
References	398

Chapter 26

Junction Design

ROGER N. BIRD

1. Introduction	399
2. Junction types	400
3. Principles of design	400
3.1. Conflict	400
3.2. Traffic composition and priority	402
3.3. Appearance	402
3.4. Environmental intrusion	403
4. Priority intersections	404
4.1. Types	404
4.2. Standards	404
4.3. Capacity	405
4.4. Design considerations	406
5. Roundabouts	406
5.1. Operation	406
5.2. Types	407
5.3. Capacity	409
5.4. Design	409
6. Grade-separated junctions	410
6.1. Types	410
6.2. Capacity	411
7. Summary	411
References	411

*Chapter 27***High-occupancy Routes and Truck Lanes**

DAVID PITFIELD and ROBERT WATSON

413

- | | |
|--|-----|
| 1. High-occupancy vehicle lanes | 413 |
| 1.1. Definition | 413 |
| 1.2. Justification | 413 |
| 1.3. Location and trend | 414 |
| 1.4. Effectiveness and evaluation | 415 |
| 1.5. Marketing HOV lanes and the impact on car sharing | 418 |
| 2. Truck lanes | 418 |
| 2.1. Definition | 418 |
| 2.2. Justification for restrictions | 418 |
| 2.3. Problems with restrictions | 419 |
| 2.4. Categories of truck lane | 420 |
| 2.5. Evaluation methods and effectiveness | 422 |
| References | 423 |

*Chapter 28***Urban Traffic Flow**

ANTHONY D. MAY

425

- | | |
|--|-----|
| 1. Introduction | 425 |
| 2. The principal parameters | 425 |
| 2.1. The range of conditions | 425 |
| 2.2. Measures of quantity | 427 |
| 2.3. Measures of quality | 427 |
| 3. The fundamental relationship | 428 |
| 3.1. The relationship between concentration, flow, and speed | 428 |
| 3.2. The shape of the fundamental relationship | 429 |
| 3.3. Empirical relationships | 430 |
| 3.4. Estimation of capacity | 431 |
| 3.5. The appropriate value of average speed | 431 |
| 3.6. Practical capacity | 432 |
| 3.7. Factors affecting link capacity | 432 |
| 4. The characteristics of urban networks | 433 |
| 4.1. Links and networks | 433 |
| 4.2. Appropriate parameters | 434 |
| 4.3. Performance and supply curves | 434 |
| 5. Summary | 436 |
| References | 437 |

*Chapter 29***Traffic Flow Control**

LAURIE SCHINTLER	439
1. Introduction	439
2. Surveillance and communication	439
3. Prediction	440
4. Traffic control	441
4.1. Road markings and traffic signs	441
4.2. Intersection signalization and co-ordination	442
4.3. Ramp metering	443
4.4. Traffic advisory and information systems	444
4.5. Limited access lanes	444
4.6. Road pricing/electronic payment	445
4.7. Incident and emergency management systems	445
4.8. Advanced vehicle control and safety systems (AVCSS)	446
4.9. Traffic calming and street space management	446
References	447

*Chapter 30***Traffic Control Devices and Management**

KENNETH J. BUTTON	449
1. Introduction	449
2. The scope	450
3. Motivations	451
4. Techniques	453
5. Trends	458
References	459

*Chapter 31***Intelligent Transport Systems**

MICHAEL A.P. TAYLOR	461
1. Introduction	461
2. Interactions and their significance	463
2.1. Trackway–vehicle interactions	466
2.2. Trackway–user interactions	466
2.3. Vehicle–user interactions	466
2.4. Trackway–vehicle–user interactions	466
2.5. Other interactions	467
3. Benefits	467
4. Developments around the world	470
4.1. Privacy and information issues	471

4.2. Legal issues	471
4.3. Equity and opportunity	472
5. Standards and institutions	473
6. Conclusions	474
References	475
<i>Chapter 32</i>	
Transportation Information Systems	
BRIEN BENSON	477
1. Introduction	477
2. Categories of intelligent transportation systems	478
3. Information dissemination	480
4. Commercial trucking	483
5. Transit	484
6. The role of the public and private sectors	486
7. Conclusion	486
References	487
<i>Chapter 33</i>	
Route Guidance Systems	
DONNA NELSON and PHILIP J. TARNOFF	489
1. Introduction	489
1.1. Definition and alternative forms of route guidance	489
2. Stand-alone systems	490
2.1. Internet-based systems	490
2.2. Dispatching systems	494
3. In-vehicle systems	495
3.1. Operator-assisted route guidance	495
3.2. Autonomous route guidance	497
3.3. Dynamic route guidance systems	497
3.4. Benefits of in-vehicle systems	499
4. The future of route guidance	500
4.1. Future challenges	500
4.2. Vision for the future	500
References	501
<i>Chapter 34</i>	
Modeling Traffic Signal Control	
MIKE SMITH, JANET CLEGG and ROBERT YARROW	503
1. Introduction	503
1.1. An overview of this chapter	503

1.2.	Traffic signal control and transportation management	504
1.3.	Public transport priority using traffic signal control	505
1.4.	Traffic signal control within transportation management models	507
1.5.	New targets	507
2.	Background to current traffic signal control	508
2.1.	Standard traffic signal control strategies	508
3.	Continuous modeling of fixed-time isolated signals	509
3.1.	Delay formula, routes, lanes, and stages	510
4.	Continuous modeling and optimization of fixed-time isolated signals for fixed flows	511
4.1.	Stages and stage green-times	511
4.2.	Supply feasibility	512
4.3.	Constraints on the stage green-times	512
4.4.	Optimizing the signal settings for fixed flows	512
4.5.	More general policies	513
5.	Discrete modeling and optimization of fixed-time isolated signals for fixed flows	514
6.	Network modeling and control with fixed route flows and lane flows	515
6.1.	Feasibility constraints	515
6.2.	Total travel cost or time and the standard traffic control problem	515
6.3.	Network effects	516
6.4.	Other extensions of these ideas	517
6.5.	TRANSYT (TRAffic Network StudY Tool)	517
6.6.	SCOOT (Split Cycle Offset Optimization Technique)	518
6.7.	SCATS (Sydney Co-ordinated Adaptive Traffic System)	518
6.8.	Other real-life strategies	519
6.9.	Modeling assessments of standard signal control policies when choices are variable	519
7.	Signal control modeling and optimization for new targets with variable flows	520
7.1.	Wardrop equilibrium on a fixed set of routes	520
7.2.	Optimization subject to equilibrium	520
8.	A signal control strategy classification	522
8.1.	Fixed-choice local strategies	522
8.2.	Fixed-choice network strategies	523
8.3.	Variable-choice network strategies	523
8.4.	Less standard or newer strategies	523
9.	Conclusion	524
	References	524

*Chapter 35***Railway Scheduling**

ROBERT WATSON

527

- | | |
|---|-----|
| 1. Definitions | 527 |
| 2. Time horizons | 527 |
| 2.1. Strategic planning | 527 |
| 2.2. Tactical planning | 528 |
| 2.3. Operational planning and control | 528 |
| 3. Stages in the process | 528 |
| 3.1. Base data | 529 |
| 3.2. Business specifications | 529 |
| 3.3. Timetable planning (sometimes known as timetable development or, in the U.K., access planning) | 530 |
| 3.4. Rolling stock scheduling | 532 |
| 3.5. Train crew scheduling | 533 |
| 3.6. Timetable production | 534 |
| 4. Key issues | 534 |
| 4.1. Need to deliver solutions in a reasonable time | 534 |
| 4.2. Need for robust solutions | 535 |
| 4.3. Need for solutions closer to the optimum | 536 |
| 5. Complexities | 536 |
| 6. Software | 537 |
| 7. Conclusions | 538 |
| References | 538 |

*Chapter 36***Public Transport Scheduling**

AVISHAI CEDER

539

- | | |
|---|-----|
| 1. Introduction | 539 |
| 1.1. Airline scheduling | 539 |
| 1.2. Bus, railway, and passenger ferry scheduling | 540 |
| 2. Timetables | 544 |
| 2.1. Mathematical programming approaches | 544 |
| 2.2. Passenger-data-based approach | 544 |
| 3. Vehicle scheduling | 545 |
| 3.1. Objectives | 545 |
| 3.2. Exact-solution approaches | 546 |
| 3.3. A heuristic deficit function approach | 547 |
| 4. Crew scheduling and rostering | 548 |
| 4.1. Overview | 548 |
| 4.2. Mathematical approaches | 550 |

5. Example	551
6. Concluding remarks	556

Seaport Terminal Management	
BRIAN THOMAS	559
1. The terminal concept	559
2. Terminal design and layout	561
3. Terminal operations	562
4. Container-handling systems	564
4.1. Pure equipment systems	565
4.2. Combination systems	565
5. Terminal organization	565
6. Terminal management	567
6.1. Operations planning	567
6.2. Container control	568
6.3. Supervision of operations	568
6.4. Information systems	568
6.5. Communications	569
7. Terminal safety and security	569
8. Conclusion	570
References	570
<i>Chapter 38</i>	
Air Traffic Control Systems	
GEORGE L. DONOHUE	571
1. Background	571
2. Government services and responsibilities	572
3. A typical flight	574
4. System capacity and delay	576
