

The Economics of Energy and the Production Process

An Evolutionary Approach

Guido Buenstorf

*Max Planck Institute for Research into Economic Systems,
Jena, Germany*

NEW HORIZONS IN INSTITUTIONAL AND EVOLUTIONARY ECONOMICS

Edward Elgar

Cheltenham, UK • Northampton, MA, USA

Contents

<i>List of figures</i>	<i>figures</i>	<i>vii</i>
<i>List of tables</i>		<i>viii</i>
<i>List of symbols</i>		<i>ix</i>
<i>Preface</i>		<i>xi</i>
1. Introduction: energy is back on the agenda		1
1.1 Power blackouts in the knowledge economy		1
1.2 Three levels of analyzing production		3
1.3 Outline of the argument		8
2. The physical perspective on the economy and its limitations		10
2.1 A brief history of energy in economics		10
2.2 Thermodynamic concepts and economic applications		20
2.3 Open systems thermodynamics		33
2.4 Economic implications of thermodynamic concepts		38
2.5 Conclusions: the need for a more economic approach		43
2.6 A note on terminology		44
3. Production as a sequential process		45
3.1 Activity analysis: abstract models of inputs and outputs		45
3.2 Sequential production in engineering and economics		47
3.3 Property vectors, operations and techniques		59
3.4 From operations to factors of production		65
3.5 Conclusions		73
4. More than heat and light: the services provided by energy use in production		74
4.1 Forms of energy and the factor services provided by them		74
4.2 Regularities in human wants and direct services of energy		78
4.3 Indirect factor services of energy use		82
4.4 Conclusions		88
