Contents

1	Introduction	1
2	Density and Probability Function Estimation	5
2.1	Parametric Density Estimators	6
2.2	Histograms and Kernel Density Estimators	6
2.3	Bandwidth Selection	12
2.4	Frequency and Kernel Probability Estimators	16
2.5	Kernel Density Estimation with Discrete and Continuous Data	18
2.6	Constructing Error Bounds	20
2.7	Curse-of-Dimensionality	21
3	Conditional Density Estimation	25
3.1	Kernel Estimation of a Conditional PDF	25
3.2	Kernel Estimation of a Conditional CDF	28
3.3	Kernel Estimation of a Conditional Quantile	29
3.4	Binary Choice and Count Data Models	31
4	Regression	33
4.1	Local Constant Kernel Regression	33
4.2	Local Polynomial Kernel Regression	38

4.3	Assessing Goodness-of-Fit	46
4.4	A Resistant Local Constant Method	48
5	Semiparametric Regression	51
5.1	Partially Linear Models	52
5.2	Index Models	54
5.3	Smooth Coefficient (Varying Coefficient) Models	57
6	Panel Data Models	59
6.1	Nonparametric Estimation of Fixed Effects Panel Data Models	60
7	Consistent Hypothesis Testing	63
7.1	Testing Parametric Model Specification	64
7.2	A Significance Test for Nonparametric Regression Models	66
8	Computational Considerations	71
8.1	Use Binning Methods	72
8.2	Use Transforms	72
8.3	Exploit Parallelism	72
8.4	Use Multipole and Tree-Based Methods	72
9	Software	75
	Conclusions	77
	Acknowledgments	79
	Background Material	81
	Notations and Acronyms	83
	References	85
