<b>PART ONE</b>	<b>BASIC THEORY OF DERIVATIVES</b>	<b>1</b>
<b>1</b>	<b>Products and Markets</b>	<b>3</b>
1.1	Introduction	3
1.2	The time value of money	3
1.3	Equities	5
	1.3.1 Dividends	10
	1.3.2 Stock splits	11
1.4	Commodities	12
1.5	Currencies	12
1.6	Indices	13
1.7	Fixed-income securities	15
1.8	Inflation-proof bonds	17
1.9	Forwards and futures	19
	1.9.1 A first example of no arbitrage	19
1.10	Summary	21
<b>2</b>	<b>Derivatives</b>	<b>23</b>
2.1	Introduction	23
2.2	Options	23
2.3	Definition of common terms	28
2.4	Payoff diagrams	29
	2.4.1 Other representations of value	29
2.5	Writing options	34
2.6	Margin	34
2.7	Market conventions	35
2.8	The value of the option before expiry	35
2.9	Factors affecting derivative prices	36
2.10	Speculation and gearing	37
2.11	Early exercise	38
2.12	Put-call parity	38
2.13	Binaries or digitals	40
2.14	Bull and bear spreads	41
2.15	Straddles and strangles	42

2.16	Risk reversal	45
2.17	Butterflies and condors	46
2.18	Calendar spreads	46
2.19	LEAPS and FLEX	47
2.20	Warrants	48
2.21	Convertible bonds	48
2.22	Over the counter options	48
2.23	Summary	48
<b>3</b>	<b>The Random Behavior of Assets</b>	<b>51</b>
3.1	Introduction	51
3.2	Similarities between equities, currencies, commodities and indices	51
3.3	Examining returns	52
3.4	Timescales	55
	3.4.1 The drift	57
	3.4.2 The volatility	58
3.5	Estimating volatility	59
	3.5.1 Exponentially weighted	59
	3.5.2 Using highs and lows	59
	3.5.3 High-low-close estimator	60
3.6	The random walk on a spreadsheet	60
3.7	The Wiener process	61
3.8	The widely accepted model for equities, currencies, commodities and indices	62
3.9	Summary	63
<b>4</b>	<b>Elementary Stochastic Calculus</b>	<b>65</b>
4.1	Introduction	65
4.2	A motivating example	65
4.3	The Markov property	67
4.4	The martingale property	67
4.5	Quadratic variation	67
4.6	Brownian motion	68
4.7	Stochastic integration	69
4.8	Stochastic differential equations	70
4.9	The mean square limit	70
4.10	Functions of stochastic variables and Itô's lemma	71
4.11	Itô and Taylor	73
4.12	Itô in higher dimensions	74
4.13	Some pertinent examples	75
	4.13.1 Brownian motion with drift	75
	4.13.2 The lognormal random walk	75
	4.13.3 A mean-reverting random walk	78
	4.13.4 And another mean-reverting random walk	78
4.14	Summary	80

<b>5</b>	<b>The Black–Scholes Model</b>	<b>81</b>
5.1	Introduction	81
5.2	A very special portfolio	81
5.3	Elimination of risk: delta hedging	82
5.4	No arbitrage	83
5.5	The Black–Scholes equation	84
5.6	The Black–Scholes assumptions	85
5.7	Final conditions	86
5.8	Options on dividend-paying equities	87
5.9	Currency options	87
5.10	Commodity options	87
5.11	Options on futures	88
5.12	Some other ways of deriving the Black–Scholes equation	88
	5.12.1 The martingale approach	88
	5.12.2 The binomial model	88
	5.12.3 CAPM/utility	88
5.13	Summary	89
<b>6</b>	<b>Partial Differential Equations</b>	<b>91</b>
6.1	Introduction	91
6.2	Putting the Black–Scholes equation into historical perspective	91
6.3	The meaning of the terms in the Black–Scholes equation	92
6.4	Boundary and initial/final conditions	93
6.5	Some solution methods	93
	6.5.1 Transformation to constant coefficient diffusion equation	93
	6.5.2 Green’s functions	94
	6.5.3 Series solution	94
6.6	Similarity reductions	95
6.7	Other analytical techniques	96
6.8	Numerical solution	96
6.9	Summary	97
<b>7</b>	<b>The Black–Scholes Formulae and the ‘Greeks’</b>	<b>99</b>
7.1	Introduction	99
7.2	Derivation of the formulae for calls, puts and simple digitals	100
	7.2.1 Formula for a call	104
	7.2.2 Formula for a put	107
	7.2.3 Formula for a binary call	109
	7.2.4 Formula for a binary put	111
7.3	Delta	111
7.4	Gamma	112
7.5	Theta	115
7.6	Vega	115
7.7	Rho	118
7.8	Implied volatility	119

7.9	A classification of hedging types	122
7.9.1	Why hedge?	122
7.9.2	The two main classifications	122
7.9.3	Delta hedging	122
7.9.4	Gamma hedging	122
7.9.5	Vega hedging	123
7.9.6	Static hedging	123
7.9.7	Margin hedging	123
7.9.8	Crash (Platinum) hedging	124
7.10	Summary	124
<b>8</b>	<b>Simple Generalizations of the Black–Scholes World</b>	<b>127</b>
8.1	Introduction	127
8.2	Dividends, foreign interest and cost of carry	127
8.3	Dividend structures	128
8.4	Dividend payments and no arbitrage	128
8.5	The behavior of an option value across a dividend date	129
8.6	Time-dependent parameters	131
8.7	Formulae for power options	133
8.8	The log contract	134
8.9	Summary	134
<b>9</b>	<b>Early Exercise and American Options</b>	<b>137</b>
9.1	Introduction	137
9.2	The perpetual American put	137
9.3	Perpetual American call with dividends	141
9.4	Mathematical formulation for general payoff	142
9.5	Local solution for call with constant dividend yield	144
9.6	Other dividend structures	146
9.7	One-touch options	147
9.8	Other features in American-style contracts	149
9.8.1	Bermudan options	149
9.8.2	Make your mind up	150
9.9	Other issues	151
9.9.1	Nonlinearity	151
9.9.2	Free boundary problems	151
9.9.3	Numerical solution	152
9.10	Summary	152
<b>10</b>	<b>Probability Density Functions and First Exit Times</b>	<b>155</b>
10.1	Introduction	155
10.2	The transition probability density function	155
10.3	A trinomial model for the random walk	156
10.4	The forward equation	157
10.5	The steady-state distribution	160
10.6	The backward equation	160
10.7	First exit times	160

10.8	Cumulative distribution functions for first exit times	161
10.9	Expected first exit times	162
10.10	Another example of optimal stopping	163
10.11	Expectations and Black–Scholes	164
10.12	Summary	165
<b>11</b>	<b>Multi-asset Options</b>	<b>167</b>
11.1	Introduction	167
11.2	Multi-dimensional lognormal random walks	167
11.3	Measuring correlations	168
11.4	Options on many underlyings	170
11.5	The pricing formula for European non-path-dependent options on dividend-paying assets	171
11.6	Exchanging one asset for another: a similarity solution	171
11.7	Quantos	172
11.8	Two examples	174
11.9	Other features	176
11.10	Realities of pricing basket options	177
	11.10.1 Easy problems	177
	11.10.2 Medium problems	177
	11.10.3 Hard problems	177
11.11	Realities of hedging basket options	178
11.12	Correlation versus cointegration	178
11.13	Summary	178
<b>12</b>	<b>The Binomial Model</b>	<b>179</b>
12.1	Introduction	179
12.2	Equities can go down as well as up	180
12.3	The binomial tree	181
12.4	The asset price distribution	182
12.5	An equation for the value of an option	183
12.6	Valuing back down the tree	184
12.7	The greeks	187
12.8	Early exercise	189
12.9	The continuous-time limit	190
12.10	No arbitrage in the binomial, Black–Scholes and ‘other’ worlds	191
12.11	Summary	192
<b>13</b>	<b>Predicting the Markets?</b>	<b>193</b>
13.1	Introduction	193
13.2	Technical analysis	193
	13.2.1 Plotting	194
	13.2.2 Support and resistance	194
	13.2.3 Trendlines	195
	13.2.4 Moving averages	195
	13.2.5 Relative strength	197
	13.2.6 Oscillators	197

13.2.7	Bollinger bands	198
13.2.8	Miscellaneous patterns	198
13.2.9	Japanese candlesticks	199
13.2.10	Point and figure charts	200
13.3	Wave theory	202
13.3.1	Elliott waves and Fibonacci numbers	202
13.3.2	Gann charts	204
13.4	Other analytics	204
13.5	Market microstructure modeling	204
13.5.1	Effect of demand on price	205
13.5.2	Combining market microstructure and option theory.	205
13.5.3	Imitation	205
13.6	Crisis prediction	205
13.7	Summary	206
<b>14</b>	<b>A Trading Game</b>	<b>207</b>
14.1	Introduction	207
14.2	Aims	207
14.3	Object of the game	207
14.4	Rules of the game	207
14.5	Notes	208
14.6	How to fill in your trading sheet	208
14.6.1	During a trading round	208
14.6.2	At the end of the game	209
<b>PART TWO</b>	<b>PATH DEPENDENCY</b>	<b>211</b>
<b>15</b>	<b>An Introduction to Exotic and Path-Dependent Options</b>	<b>213</b>
15.1	Introduction	213
15.2	Discrete cashflows	214
15.3	Early exercise	215
15.4	Weak path dependence	215
15.5	Strong path dependence	216
15.6	Time dependence	217
15.7	Dimensionality	217
15.8	The order of an option	217
15.9	Decisions, decisions	218
15.10	Classification tables	218
15.11	Compounds and choosers	219
15.12	Range notes	223
15.13	Barrier options	224
15.14	Asian options	224
15.15	Lookback options	226
15.16	Summary	227
<b>16</b>	<b>Barrier Options</b>	<b>229</b>
16.1	Introduction	229
16.2	Different types of barrier option	230

16.3	Pricing barriers in the partial differential equation framework	231
16.3.1	‘Out’ barriers	231
16.3.2	‘In’ barriers	232
16.3.3	Some formulae when volatility is constant	232
16.3.4	Some more examples	236
16.4	Other features of barrier-style options	236
16.4.1	Early exercise	240
16.4.2	The intermittent barrier	240
16.4.3	Repeated hitting of the barrier	241
16.4.4	Resetting of barrier	242
16.4.5	Outside barrier options	242
16.4.6	Soft barriers	242
16.4.7	Parisian options	243
16.5	First exit time	243
16.6	Market practice: What volatility should I use?	244
16.7	Hedging barrier options	246
16.7.1	Slippage costs	249
16.8	Summary	250
<b>17</b>	<b>Strongly Path-dependent Options</b>	<b>253</b>
17.1	Introduction	253
17.2	Path-dependent quantities represented by an integral	254
17.2.1	Examples	254
17.3	Continuous sampling: The pricing equation	255
17.3.1	Example	256
17.4	Path-dependent quantities represented by an updating rule	256
17.4.1	Examples	256
17.5	Discrete sampling: The pricing equation	257
17.5.1	Examples	258
17.5.2	The algorithm for discrete sampling	259
17.6	Higher dimensions	260
17.7	Pricing via expectations	261
17.8	Early exercise	261
17.9	Summary	261
<b>18</b>	<b>Asian Options</b>	<b>263</b>
18.1	Introduction	263
18.2	Payoff types	263
18.3	Types of averaging	264
18.3.1	Arithmetic or geometric	264
18.3.2	Discrete or continuous	264
18.4	Extending the Black–Scholes equation	265
18.4.1	Continuously-sampled averages	265
18.4.2	Discretely-sampled averages	266
18.4.3	Exponentially-weighted and other averages	270
18.4.4	The Asian tail	271
18.5	Early exercise	271

18.6	Asian options in higher dimensions	271
18.7	Similarity reductions	272
	18.7.1 Put-call parity for the European average strike	273
18.8	Some formulae	274
18.9	Summary	275
<b>19</b>	<b>Lookback Options</b>	<b>277</b>
19.1	Introduction	277
19.2	Types of payoff	277
19.3	Continuous measurement of the maximum	277
19.4	Discrete measurement of the maximum	280
19.5	Similarity reduction	280
19.6	Some formulae	281
19.7	Summary	283
<b>20</b>	<b>Derivatives and Stochastic Control</b>	<b>285</b>
20.1	Introduction	285
20.2	Perfect trader and passport options	285
	20.2.1 Similarity solution	287
20.3	Limiting the number of trades	288
20.4	Limiting the time between trades	289
20.5	Non-optimal trading and the benefits to the writer	290
20.6	Summary	291
<b>21</b>	<b>Miscellaneous Exotics</b>	<b>293</b>
21.1	Introduction	293
21.2	Forward start options	293
21.3	Shout options	295
21.4	Capped lookbacks and Asians	296
21.5	Combining path-dependent quantities: the lookback-Asian etc.	296
	21.5.1 The maximum of the asset and the average of the asset	297
	21.5.2 The average of the asset and the maximum of the average	298
	21.5.3 The maximum of the asset and the average of the maximum	298
21.6	The volatility option	299
	21.6.1 The continuous-time limit	301
21.7	Ladders	301
21.8	Parisian options	301
	21.8.1 Examples	304
21.9	Summary	305
	<b>PART THREE EXTENDING BLACK-SCHOLES</b>	<b>309</b>
<b>22</b>	<b>Defects in the Black-Scholes Model</b>	<b>311</b>
22.1	Introduction	311
22.2	Discrete hedging	312
22.3	Transaction costs	312
22.4	Volatility smiles and surfaces	312
22.5	Stochastic volatility	313
22.6	Uncertain parameters	313

22.7	Empirical analysis of volatility	313
22.8	Jump diffusion	314
22.9	Crash modeling	314
22.10	Speculating with options	314
22.11	Optimal static hedging	315
22.12	The feedback effect of hedging in illiquid markets	315
22.13	Utility theory	316
22.14	More about American options and related matters	316
22.15	Stochastic volatility and mean-variance analysis	316
22.16	Advanced dividend modeling	317
22.17	Summary	317
<b>23</b>	<b>Discrete Hedging</b>	<b>319</b>
23.1	Introduction	319
23.2	A model for a discretely-hedged position	319
23.3	A higher-order analysis	321
23.3.1	Choosing the best $\Delta$	323
23.3.2	The hedging error	324
23.3.3	Pricing the option	325
23.3.4	The adjusted $\Delta$ and option value	325
23.4	The real distribution of returns and the hedging error	326
23.5	Total hedging error	328
23.6	Summary	329
<b>24</b>	<b>Transaction Costs</b>	<b>331</b>
24.1	Introduction	331
24.2	The effect of costs	331
24.3	The model of Leland (1985)	332
24.4	The model of Hoggard, Whalley & Wilmott (1992)	333
24.5	Non-single-signed gamma	337
24.6	The marginal effect of transaction costs	337
24.7	Other cost structures	340
24.8	Hedging to a bandwidth: the model of Whalley & Wilmott (1993) and Henrotte (1993)	340
24.9	Utility-based models	341
24.9.1	The model of Hodges & Neuberger (1989)	341
24.9.2	The model of Davis, Panas & Zariphopoulou (1993)	342
24.9.3	The asymptotic analysis of Whalley & Wilmott (1993)	342
24.9.4	Arbitrary cost structure	343
24.10	Interpretation of the models	344
24.10.1	Nonlinearity	344
24.10.2	Negative option prices	345
24.10.3	Existence of solutions	346
24.11	Non-normal returns	346
24.12	Empirical testing	347
24.12.1	Black-Scholes and Leland hedging	348
24.12.2	Market movement or delta-tolerance strategy	349

24.12.3	The utility strategy	349
24.12.4	Using the real data	351
24.12.5	And the winner is...	352
24.13	Summary	353
<b>25</b>	<b>Volatility Smiles and Surfaces</b>	<b>357</b>
25.1	Introduction	357
25.2	Implied volatility	357
25.3	Time-dependent volatility	359
25.4	Volatility smiles and skews	361
25.5	Volatility surfaces	362
25.6	Backing out the local volatility surface from European call option prices	362
25.7	A simple volatility surface parameterization	366
25.8	An approximate solution	367
25.9	Volatility information contained in an at-the-money straddle	367
25.10	Volatility information contained in a risk-reversal	368
25.11	Time dependence	369
25.12	A market convention	369
25.13	How do I use the local volatility surface?	370
25.14	Summary	370
<b>26</b>	<b>Stochastic Volatility</b>	<b>373</b>
26.1	Introduction	373
26.2	Random volatility	373
26.3	A stochastic differential equation for volatility	373
26.4	The pricing equation	374
26.5	The market price of volatility risk	376
	26.5.1 Aside: The market price of risk for traded assets	377
26.6	An example	377
26.7	Named models	379
26.8	GARCH	379
26.9	Stochastic implied volatility: the model of Schönbucher	379
26.10	Summary	381
<b>27</b>	<b>Uncertain Parameters</b>	<b>383</b>
27.1	Introduction	383
27.2	Best and worst cases	385
	27.2.1 Uncertain volatility: The model of Avellaneda, Levy & Parás and Lyons (1995)	385
	27.2.2 Example: An up-and-out call	387
	27.2.3 Uncertain interest rate	389
	27.2.4 Uncertain dividends	390
27.3	Uncertain correlation	391
27.4	Nonlinearity	391
27.5	Summary	392

<b>28</b>	<b>Empirical Analysis of Volatility</b>	<b>395</b>
28.1	Introduction	395
28.2	Stochastic volatility and uncertain parameters revisited	395
28.3	Deriving an empirical stochastic volatility model	396
28.4	Estimating the volatility of volatility	397
28.5	Estimating the drift of volatility	398
28.6	How to use the model	399
	28.6.1 Option pricing with stochastic volatility	399
	28.6.2 The time evolution of stochastic volatility	399
	28.6.3 Stochastic volatility, certainty bands and confidence limits	400
28.7	Summary	400
<b>29</b>	<b>Jump Diffusion</b>	<b>403</b>
29.1	Introduction	403
29.2	Evidence for jumps	403
29.3	Poisson processes	406
29.4	Hedging when there are jumps	408
29.5	Hedging the diffusion	408
29.6	Hedging the jumps	409
29.7	Hedging the jumps and risk neutrality	410
29.8	The downside of jump-diffusion models	411
29.9	Jump volatility	411
29.10	Jump volatility with deterministic decay	412
29.11	Summary	413
<b>30</b>	<b>Crash Modeling</b>	<b>415</b>
30.1	Introduction	415
30.2	Value at Risk	415
30.3	A simple example: the hedged call	416
30.4	A mathematical model for a crash	417
	30.4.1 Case I: Black–Scholes hedging	420
	30.4.2 Case II: Crash hedging	420
30.5	An example	421
30.6	Optimal static hedging: VaR reduction	422
30.7	Continuous-time limit	423
30.8	A range for the crash	423
30.9	Multiple crashes	424
	30.9.1 Limiting the total number of crashes	424
	30.9.2 Limiting the frequency of crashes	424
30.10	Crashes in a multi-asset world	425
30.11	Fixed and floating exchange rates	425
30.12	Summary	426
<b>31</b>	<b>Speculating with Options</b>	<b>429</b>
31.1	Introduction	429
31.2	A simple model for the value of an option to a speculator	430

31.2.1	The present value of expected payoff	430
31.2.2	Standard deviation	431
31.3	More sophisticated models for the return on an asset	433
31.3.1	Diffusive drift	435
31.3.2	Jump drift	435
31.4	Early closing	438
31.5	To hedge or not to hedge?	441
31.6	Other issues	443
31.7	Summary	443
<b>32</b>	<b>Static Hedging</b>	<b>445</b>
32.1	Introduction	445
32.2	Static replicating portfolio	445
32.3	Matching a 'target' contract	446
32.4	Static hedging; nonlinear governing equation	447
32.5	Nonlinear equations	448
32.6	Pricing with a nonlinear equation	448
32.7	Static hedging	449
32.8	Optimal static hedging	451
32.9	Hedging path-dependent options with vanilla options	453
32.9.1	Barrier options	453
32.9.2	Pricing and optimally hedging a portfolio of barrier options	454
32.10	The mathematics of optimization	455
32.10.1	Downhill simplex method	455
32.10.2	Simulated annealing	459
32.11	Optimal portfolios for speculators	460
32.12	Summary	460
<b>33</b>	<b>The Feedback Effect of Hedging in Illiquid Markets</b>	<b>461</b>
33.1	Introduction	461
33.2	The trading strategy for option replication	462
33.3	The excess demand function	463
33.4	Incorporating the trading strategy	463
33.5	The influence of replication	465
33.6	The forward equation	468
33.6.1	The boundaries	468
33.7	Numerical results	470
33.7.1	Time-independent trading strategy	471
33.7.2	Put replication trading	473
33.8	Summary	474
<b>34</b>	<b>Utility Theory</b>	<b>477</b>
34.1	Introduction	477
34.2	Ranking events	477
34.3	The utility function	478
34.4	Risk aversion	479
34.5	Special utility functions	479
34.6	Certainty equivalent wealth	480

34.7	Maximization of expected utility	482
34.7.1	Ordinal and cardinal utility	482
34.8	Summary	483
<b>35</b>	<b>More About American Options and Related Matters</b>	<b>485</b>
35.1	Introduction	485
35.2	What <i>Derivatives Week</i> published	486
35.3	Hold these thoughts	487
35.4	Change of notation	487
35.5	And finally, the paper. . .	488
35.6	Introduction	488
35.7	Preliminary: pricing and hedging	490
35.8	Utility maximizing exercise time	491
35.8.1	Constant Absolute Risk Aversion	493
35.8.2	Hyperbolic Absolute Risk Aversion	494
35.8.3	The expected return	495
35.9	Profit from selling American options	495
35.10	Concluding remarks	498
35.11	FAQ	499
35.12	Another situation where the same idea applies: passport options	499
35.12.1	Recap	499
35.12.2	Utility maximization in the passport option	500
35.13	Summary	503
<b>36</b>	<b>Stochastic Volatility and Mean-variance Analysis</b>	<b>505</b>
36.1	Introduction	505
36.2	The model for the asset and its volatility	506
36.3	Analysis of the mean	506
36.4	Analysis of the variance	506
36.5	Choosing $\Delta$ to minimize the variance	507
36.6	The mean and variance equations	507
36.7	How to interpret and use the mean and variance	508
36.8	Static hedging and portfolio optimization	508
36.9	Example: Valuing and hedging an up-and-out call	508
36.9.1	Static hedging	509
36.10	Summary	511
<b>37</b>	<b>Advanced Dividend Modeling</b>	<b>513</b>
37.1	Introduction	513
37.2	Why do we need dividend models?	513
37.3	Effects of dividends on asset prices	515
37.3.1	Market frictions	516
37.3.2	Term structure of dividends	516
37.4	Stochastic dividends	517
37.5	Poisson jumps	518
37.6	Uncertainty in dividend amount and timing	518
37.7	Summary	520
