<i>Introduction</i>		xiii
1. A question of method and approach: In search of human nature in organization research?		1
1.1 Beyond realism: Problem dependence and research heuristics		3
1.2 Economic versus behavioral approaches to organization research: A brief introduction		9
1.3 Portraying or not portraying human nature in organization theory: Methodical issues, economic reconstruction and practical relevance		14
1.4 Concluding remarks		20
2. A non-behavioral economic approach to institutional organization: Contribution-distribution interactions, interest equilibration and the incentive-compatibility of the situation		23
2.1- Theoretical-practical concepts (I): Incentive structures and the analysis of the incentive-compatibility of the situation		24
2.2 Theoretical-practical concepts (IIj): Capital exchange and the analysis of organizational behavior as capital contribution-distribution interactions		30
2.3 Heuristic concepts (I): Dilemma structures and the situational analysis of nonzero-sum interdependence in social interactions		33
2.4 Heuristic concepts (II): Economic man and the situational analysis of self-interested, utility-maximizing choice		39
2.5 Concluding remarks		43
3. Behavioral approaches to institutional organization: Towards a 'science of human nature'?		47
3.1 The quest for holism and interdisciplinarity: Behavioral sciences drifting into philosophy		47

3.2	Traditional organizational psychology: The analysis of motivation as a problem of individual behavior	54
3.3	Heuristic aspects of modeling human nature in behavioral' research	64
3.4	Effectiveness limits of moral-behavioral organization theory	67
3.5	Concludingremarks	72
4.	Taylor's, Simon's and Williamson's search of organizational economics: Incentive structures, dilemmatic interest conflict and mutual gains	76
4.1	Taylor's scientific management: Between incentive systems and moral appeal	77
4.2	Simon's administrative behavior approach: Between compensation schemes and psychological environment	89
4.3	Williamson's governance approach: Incentive structures and the resolution of the contracting dilemma	100
4.4	Concludingremarks	106
5.	Organizational behavior and capital utilization: Modeling human capital as boundedly rational or as asset-specific?	110
5.1	Taylor's analysis of human capital: Between competence and insufficient mental capacity	110
5.2	Simon's analysis of human capital: Between bounded skillfulness and bounded rationality	117
5.3	Williamson's analysis of human capital: Between human asset specificity and bounded rationality	122
5.4	Concludingremarks	128
6.	Modeling motivation and cognition in organizational economics: Research heuristics or the portrayal of 'human nature as we know it' ?	131
6.1	Taylor's heuristic models of motivation and cognition: 'Systematic soldiering', 'natural soldiering' and 'optimum behavior'	132
6.2	Simon's heuristic models of motivation and cognition: individual aims' and 'optimizing behavior'	137
6.3	Williamson's heuristic models of motivation and cognition: 'Opportunism', 'maximizing behavior' and 'economizing behavior'	145
6.4	Concluding remarks	155

7.	The evolution of institutional organization: Economics of environmental change or a behavioral discovery process of 'true' human nature?	158
7.1	Institutional economics, organizational change and environmental change: Modeling interdependence between 'external' and 'internal' incentive structures and capital contingencies	159
7.2	Taylor's sporadic analysis of organizational change in relation to environmental change	167
7.3	Simon's neglected analysis of organizational change in relation to environmental change	173
7.4	Williamson's firm-size-based analysis of organizational change and the assumption of environmental invariance/ insignificance	179
7.5	Concluding remarks	189
8.	Concluding discussion: The end of ethics <i>or</i> is economics the better moral science?	192
8.1	On the moral status of organizational economics and its image of human nature	192
8.2	interdisciplinary' collaboration between economics and behavioral sciences	206
8.3	Directions for future research	213
	<i>Bibliography</i>	216
