

ENCYCLOPEDIA OF QUANTITATIVE FINANCE

Volume 1 A-D

Editor-in-Chief

RAMACONT

CNRS, Paris, France and Columbia University, New York, USA

WILEY

Contents

VOLUME 1		
ABS Indices	1	Basket Options
Accumulated Claims	4	Bates Model
Actuarial Premium Principles	7	Behavioral Portfolio Selection
Adverse Selection	13	Bermudan Options
Affine Models	16	Bermudan Swaptions and Callable
Algorithmic Trading	20	Libor Exotics
Alternating Direction Implicit (ADI)		Bernoulli, Jacob
Method	30	Bid-Ask Spreads
Altiplano Option	37	Binomial Tree
Ambiguity	39	Black, Fischer
American Options	44	Black-Litterman Approach
Arbitrage Bounds	53	Black-Scholes Formula
Arbitrage: Historical Perspectives	61	Bond
Arbitrage Pricing Theory	71	Bond Options
Arbitrage Strategy	74	Bubbles and Crashes
AITOW, Kenneth	76	Butterfly
Arrow-Debreu Prices	82	
Asian Options	87	Call Auction Markets
Asset-Liability Management	91	Call Options
Atlas Option	107	Call Spread
Autocall	108	Capital Asset Pricing Model
Automated Trading	111	Caps and Floors
Autoregressive Moving Average		Catastrophe Bonds
(ARMA) Processes	114	CDO Square '
Average Strike Options	120	CDO Tranches: Impact on Economic
		Capital
Bachelier, Louis (1870-1946)	123	Change of Numeraire
Backtestine	127	Cliquet Options
Backward Stochastic Differential		CMS Spread Products
Equations	134	CoUateralized Debt Obligation (CDO)
Backward Stochastic Differential		Options
Equations:		CoUateralized Debt Obligations
Numerical Methods	145	(CDO)
Barndorff-Nielsen and Shephard		Commodities and Numeraire
(BNS) Models	152	Commodity Forward Curve Modeling
Barrier Options	155	Commodity Price Models
Base Correlation	158	Commodity Risk
Basket Default Swaps	161	Commodity Trading
		Compensators
		Complete Markets

Conjugate Gradient Methods	324	VOLUME 2	
Constant Elasticity of Variance (CEV)		Early Exercise Options: Upper	
Diffusion Model	328	Bounds	507
Constant Maturity Credit Default		Econometrics of Diffusion Models	512
Swap	334	Econometrics of Option Pricing	518
Constant Maturity Swap	338	Economic Capital	528
Constant Proportion Portfolio		Economic Capital Allocation	531
Insurance	344	Econophysics	535
Convertible Bonds	347	Efficient Market Hypothesis	538
Convex Duality	350	Efficient Markets Theory: Historical	
Convex Risk Measures	355	Perspectives	542
Convexity Adjustments	363	Electricity Forward Contracts	546
Copulas: Estimation	368	Electricity Markets	549
Copulas in Econometrics	375	Emissions Trading	555
Copulas in Insurance	379	Employee Stock Options	561
Correlation Risk	382	Entropy-based Estimation	567
Correlation Swap	386	Equity-Credit Problem	571
Corridor Options	387	Equity Default Swaps	575
Corridor Variance Swap	392	Equity Swaps	577
Counterparty Credit Risk	393	Equivalence of Probability Measures	580
Cox-Ingersoll-Ross (CIR) Model	401	Equivalent Martingale Measures	583
Cramer-Lundberg Estimates	404	Esscher Transform	589
Cramer's Theorem	407	Eurodollar Futures and Options	592
Crank-Nicolson Scheme	410	Exchange Options	594
Credibility Theory	414	Exchange-traded Funds (ETFs)	611
Credit Default Swap (CDS) Indices	420	Execution Costs	612
Credit Default Swap Index Options	422	Exercise Boundary Optimization	
Credit Default Swaps	424	Methods	617
Credit Default Swaption	431	Expectations Hypothesis	621
Credit Migration Models	434	Expected Shortfall	630
Credit Portfolio Insurance	441	Expected Utility Maximization	634
Credit Portfolio Simulation	447	Expected Utility Maximization:	
Credit Rating	450	Duality Methods	638
Credit Risk	456	Exponential Levy Models	646
CreditRisk+	459	Exposure to Default and Loss Given	
Credit Scoring	462	Default	651
Currency Forward Contracts	467	Extreme Value Theory	657
Default Barrier Models	475		
Default Time Copulas	479	Factor Models	669
Delta Hedging	482	Filtering	674
Discretely Monitored Options	484	Filtrations	683
Dispersion Trading	486	Finite Difference Methods for Barrier	
Diversification	487	Options	687
Dividend Modeling	489	Finite Difference Methods for Early	
Doob-Meyer Decomposition	493	Exercise Options	695
Drawdown Minimization	495	Finite Element Methods	704
Duffie-Singleton Model	499	Fisher, Irving	711
Dupire Equation	501	Fixed Mix Strategy	714
Duration Models	504	Foreign Exchange Basket Options	717

Foreign Exchange Markets	722	Implied Volatility: Market Models	916
Foreign Exchange Options	727	Implied Volatility in Stochastic	
Foreign Exchange Options: Delta- and At-the-money Conventions	731	Volatility Models	920
Foreign Exchange Smile		Implied Volatility Surface	926
Interpolation	742	Implied Volatility: Volvol Expansion	931
Foreign Exchange Smiles	745	Infinite Divisibility	935
Foreign Exchange Symmetries	752	Inflation Derivatives	938
Forward and Swap Measures	760	Insurance Derivatives	948
Forward-Backward Stochastic		Insurance Risk Models	952
Differential Equations (SDEs)	763	Integral Equation Methods for Free	
Forward-starting CDO Tranche	770	Boundaries	956
Forwards and Futures	773	Intensity-based Credit Risk Models	963
Fourier Methods in Options Pricing	778	Intensity Gamma Model	966
Fourier Transform	782	Internal-ratings-based Approach	968
Fractional Brownian Motion	787	Intraday Price Efficiency	973
Free Lunch	790	Inventory Effects	976
Fundamental Theorem of Asset		Itô, Kiyosi (1915-2008)	979
Pricing	792	Ito's Formula	981
		Jarrow-Lando-Turnbull Model	985
Gamma Hedging	803	Jump-diffusion Models	987
Gamma Swap	807	Jump Processes	990
GARCH Models	809		
Gaussian Copula Model	820	VOLUME 3	
Gaussian Interest-Rate Models	828	Kelly Problem	995
Generalized Hyperbolic Models	833	Kolmogorov, Andrei Nikolaevich	998
Generalized Method of Moments		Kou Model	999
(GMM)	836	Kyle Model	1005
Gerber-Shiu Function	841		
Glosten-Milgrom Models	842	Large Deviations	1009
Good-deal Bounds	846	Large Pool Approximations	1017
		Lattice Methods for Path-dependent	
Hazard Rate	853	Options, !	1022
Heath-Jarrow-Morton Approach	856	Leveraged Super-senior Tranche	1027
Heavy Tails	860	LIBOR Market Model	1031
Heavy Tails in Insurance	873	LIBOR Market Models: Simulation	1036
Hedge Funds	875	LIBOR Rate	1041
Hedging	881	Life Insurance	1042
Hedging of Interest Rate Derivatives	884	Limit Order Markets	1057
Heston Model	889	Liquidity	1062
High-frequency Data	898	Liquidity Premium	1066
Himalayan Option	904	Loan Valuation	1071
Hull -White Stochastic, Volatility		Local Correlation Model	1075
Model	905	Local Times	1078
		Local Volatility Model	1080
Implied Volatility: Large Strike		Lognormal Mixture Diffusion Model	1086
Asymptotics	909	Long Range Dependence	1088
Implied Volatility: Long Maturity		Long-Term Capital Management	1091
Behavior	913	Lookback Options	1096

Levy Copulas	1104	Oil Market	1315
Levy Processes	1108	Operational Risk	1319
		Optimization Methods	1322
Managed CDO	1113	Option Pricing: General Principles	1327
Mandelbrot, Benoit	1115	Option Pricing Theory: Historical	
Margrabe Formula	1118	Perspectives	1331
Market Microstructure Effects	1120	Options: Basic Definitions	1341
Market Risk	1123	Order Flow	1344
Market Transparency	1131	Order Types	1349
Markov Functional Models	1138	Ornstein-Uhlenbeck Processes	1352
Markov Processes	1142		
Markovian Term Structure Models	1159	Parisian Option	1355
Markowitz, Harry	1164	Partial Differential Equations	1357
Martingale Representation		Partial Integro-differential Equations	
Theorem	1166	(PIDEs)	1363
Martingales	1171	Passport Options	1368
Mean-Variance Hedging , •	1177	Performance Measures	1372
Measurements Errors	1181	Phasertype Distribution	1375
Merton Problem	1184	Point Processes	1376
Merton, Robert C.	1188	Poisson Process	1380
Method of Lines	1191	Portfolio Credit Risk: Statistical	
Minimal Entropy Martingale		Methods	1384
Measure	1195	Predictability of Asset Prices	1387
Minimal Martingale Measure	1200	Price Impact	1402
Mixed Data Sampling	1204	Pricing Formulae for Foreign	
Mixture of Distribution Hypothesis	1207	Exchange Options	1408
Model Calibration	1210	Pricing Kernels	1418
Model Validation	1219	Probability of Informed Trading	1428
Modeling Correlation of Structured		Pseudorandom Number Generators	1431
Instruments in a Portfolio		Put-Call Parity	1437
Setting	1220		
Models	1226	Quadratic Gaussian Models	1441
Modern Portfolio Theory	1232	Quadrature Methods	1444
Modigliani, Franco	1239	Quantization Methods	1451
Modigliani-Miller Theorem	1241	Quanta Options	1455
Moment Explosions	1247	Quasi-Monte Carlo Methods	1460
Monotone Schemes	1253		
Monte Carlo Greeks	1263	VOLUME 4	
Monte Carlo Simulation	1266		
Monte Carlo Simulation for Stochastic		Random Factor Loading Model	
Differential Equations	1271	(for Portfolio Credit)	1473
Multi fractals	1278	Random Matrix Theory	1476
Multigrid Methods	1283	Rare-event Simulation	1481
Multiname Reduced Form Models	1288	Rating Transition Matrices	1484
Multivariate Distributions	1296	Real Options	1488
Municipal Bonds	1300	Realized Volatility and Multipower	
Mutual Funds	1304	Variation	1494
		Realized Volatility Options	1500
Nested Simulation	1307	Recovery Rate	1505
Normal Inverse Gaussian Model	1311	Recovery Swap	1507

Recursive Preferences	1509	Stochastic Differential Equations	
Reduced Form Credit Risk Models	1517	with Jumps: Simulation	1693
Regime-switching Models	1522	Stochastic Differential Equations:	
Regulatory Capital	1525	Scenario Simulation	1697
Reinsurance	1539	Stochastic Discount Factors	1706
Risk-adjusted Return on Capital		Stochastic Exponential	1714
(RAROC)	1544	Stochastic Integrals	1717
Risk Aversion	1546	Stochastic Mesh Method	1726
Risk Exposures	1554	Stochastic Taylor Expansions	1731
Risk Management: Historical		Stochastic Volatility Interest Rate	
Perspectives	1558	Models	1734
Risk Measures: Statistical		Stochastic Volatility Models	1737
Estimation	1563	Stochastic Volatility Models:	
Risk Premia	1574	Extremal Behavior	1741
Risk-neutral Pricing	1581	Stochastic Volatility Models:	
Risk-Return Analysis	1585	Foreign Exchange "	1748
Risk-sensitive Asset Management	1589	Stock Pinning	1754
Robust Portfolio Optimization	1593	Stress Testing	1759
Roll Model	1597	Structural Default Risk Models	1764
Ross, Stephen	1599	Structured Finance Rating	
Rubinstein, Edward Mark	1601	Methodologies	1772
Ruin Models with Investment		Style Analysis	1775
Income	1603	Stylized Properties of	
Ruin Theory	1607	Asset Returns	1777
		Superhedging	1783
SABR Model	1611	Swap Market Models	1787
Saddlepoint Approximation	1614	Swaps	1790
Samuelson, Paul A.	1619	Swing Options -	1791
Second Fundamental Theorem		Tempered Stable Process	1799
of Asset Pricing	1623	Term Structure Models	1802
Securitization	1629	Thorp, Edward	1805
Semimartingale	1633	Tikhonov Regularization	1807
Sensitivity Computations: Integration		Time Change (•	1812
by Parts	1636	Time-changed Levy Process	1816
Sharpe Ratio	1639	Total Return Swap	1823
Sharpe, William F.	1640	Transaction Costs	1824
Simulation of Square-root		Tree Methods	1829
Processes	1642	Treynor, Lawrence Jack	1835
Simulation-based Estimation	1649	Trigger Swaps '	1837
Skorokhod Embedding	1653	Uncertain Volatility Model	1841
Solvency	1658	Universal Portfolios	1845
Sparse Grids	1661	Utility Function	1848
Special-purpose Vehicle (SPV)	1667	Utility Indifference Valuation	1854
Specialist Markets	1670	Utility Theory: Historical	
Spectral Measures of Risk	1674	Perspectives	1860
Squared Bessel Processes '	1678	Value-at-Risk	1863
Static Hedging	1680	Vanna-Volga Pricing	1867
Stochastic Control '	1682	Variance-gamma Model	1875
Stochastic Control in Insurance	1689		

Variance Reduction	1882	Wavelet Galerkin Method	1909
Variance Swap	1895	Weather Derivatives	1916
Volatility	1898	Weighted Monte Carlo	1919
Volatility Index Options	1902	Weighted Variance Swap	1924
Volatility Swaps	1905	Wiener-Hopf Decomposition	1927
Volume-weighted Average Price (VWAP)	1906.	Yield Curve Construction	1935
