NEW YORK • OXFORD • PARIS • SAN DIEGO
SAN FRANCISCO • SINGAPORE • SYDNEY • TOKYO

CONTENTS OF VOLUME 1

Introduction to the Series	v
Contents of the Handbook	vii
PART I: FORECASTING METHODOLOGY	
<i>Chapter 1</i>	
Bayesian Forecasting	
JOHN GEWEKE AND CHARLES WHITEMAN	3
Abstract	4
Keywords ¹	4
1. Introduction	6
2. Bayesian inference and forecasting: A primer	7
2.1. Models for observables	7
2.2. Model completion with prior distributions	10
2.3. Model combination and evaluation	14
2.4. Forecasting	19
3. Posterior simulation methods	25
3.1. Simulation methods before 1990	25
3.2. Markov chain Monte Carlo	30
3.3. The full Monte	36
4. 'Twas not always so easy: A historical perspective	41
4.1. In the beginning, there was diffuseness, conjugacy, and analytic work	41
4.2. The dynamic linear model	43
4.3. The Minnesota revolution	44
4.4. After Minnesota: Subsequent developments	49
5. Some Bayesian forecasting models	53
5.1. Autoregressive leading indicator models	54
5.2. Stationary linear models	56
5.3. Fractional integration	59
5.4. Cointegration and error correction	61
5.5. Stochastic volatility	64
6. Practical experience with Bayesian forecasts	68
6.1. National BVAR forecasts: The Federal Reserve Bank of Minneapolis	69
6.2. Regional BVAR forecasts: Economic conditions in Iowa	70
References	73

Chapter 2

Forecasting and Decision Theory

CLIVE W.J. GRANGER AND MARK J. MACHINA

Abstract	81
Keywords	82
Preface	82
1. History of the field	83
1.1. Introduction	83
1.2. The Cambridge papers	84
1.3. Forecasting versus statistical hypothesis testing and estimation	87
2. Forecasting with decision-based loss functions	87
2.1. Background	87
2.2. Framework and basic analysis	88
2.3. Recovery of decision problems from loss functions	93
2.4. Location-dependent loss functions	96
2.5. Distribution-forecast and distribution-realization loss functions	97
References	98

Chapter 3

Forecast Evaluation

KENNETH D. WEST

Abstract	99
Keywords	100
1. Introduction	100
2. A brief history	101
3. A small number of nonnested models, Part I	102
4. A small number of nonnested models, Part II	104
5. A small number of nonnested models, Part III	106
6. A small number of models, nested: MPSE	111
7. A small number of models, nested, Part II	117
8. Summary on small number of models	122
9. Large number of models	125
10. Conclusions	125
Acknowledgements	131
References	132

Chapter 4

Forecast Combinations

ALLAN TIMMERMANN

13

5

Abstract	136
Keywords	136
1. Introduction	137
2. The forecast combination problem	140

- 2.1. Specificattonof-loss function " ' 141
- 2.2. Construction of a super model-pooling information " " 143
- 2.3. Linear forecastcombinations under MSE loss "" < "" 144
- 2.4. Optimallybf-eqiral weights-general case •• 148
- 2.5. Optimal combinations under asymmetric loss 150
- 2.6. Combining as'a hedge against non-stationarities " ' ' " ' J54
- 3. Estimation' • • 156
 - 3.1. To combine-or not to combine • • 156
 - 3.2. Least squares'estimators of the weights • "" ' 158
 - 3.3. Relative performance weights 159
 - 3.4. Momeni estimators 160
 - 3.5. Nonparametc combination schemes jgQ
 - 3.6. Pooling, clustering and trimming 162
- 4. Time-varying and nonlinear combination methods "" 165
 - 4.1. Time-varying weights ; / 165
 - 4.2. Nonlinear combination schemes 169
- 5. Shrinkage methods > 170
 - 5.1. Shrinkage and factor structure 172
 - 5.2. Constraints on combination weights 174
- 6. • Combination of interval and probability distribution forecasts •• 176
 - 6.1. The combination decision 176
 - 6.2. Combinations of probability density forecasts . 177
 - 6.3. Bayesian methods 178
 - 6.4. Combinations of quantile forecasts 179
- 7. Empirical evidence 181
 - 7.1. Simple combination schemes are hard to beat 181
 - 7.2. Choosing the single forecast with the best track record is often a bad idea 182
 - 7.3. Trimming of the worst models often improves performance 183
 - 7.4. Shrinkage often improves performance 184
 - 7.5. Limited time-variation in the combination weights may be helpful . 185
 - 7.6. Empirical application 186
- 8. Conclusion 193
- Acknowledgements 193
- References 194

Chapter 5

Predictive Density Evaluation

VALENTINA CORRADI AND NORMAN R. SWANSON

Abstract

Keywords

Part I: Introduction

1. Estimation, specification testing, and model evaluation

Part II: Testing for Correct Specification of Conditional Distributions

2. Specification testing and model evaluation in-sample	207
2.1. Diebold, Gunther and Tay approach - probability integral transform	208
2.2. Bai approach - martingalization	208
2.3. Hong and Li approach — a nonparametric test	210
2.4. Corradi and Swanson approach	212
2.5. Bootstrap critical values for the V_j and V_{by} tests	216
2.6. Other related work	220
3. Specification testing and model selection out-of-sample	220
3.1. Estimation and parameter estimation error in recursive and rolling estimation schemes - West as well as West and McCracken results	221.
3.2. Out-of-sample implementation of Bai as well as Hong and Li tests	223
3.3. Out-of-sample implementation of Corradi and Swanson tests	225
3.4. Bootstrap critical for the V_{pj} and $V_{2p,j}$ tests under recursive estimation	228
3.5. Bootstrap critical for the $V_{p/}$ and $V_{2p/j}$ tests under rolling estimation	233
Part III: "Evaluation of (Multiple) Misspecified Predictive Models	234
4. Pointwise comparison of (multiple), misspecified predictive models	234
4.1. Comparison of two nonnested models: Diebold and Mariano test	235
4.2. Comparison of two nested models	238
4.3. Comparison of multiple models: The reality check	242
4.4. A predictive accuracy test that is consistent against generic alternatives	249
5. Comparison of (multiple) misspecified predictive density models	253
5.1. The Kullback-Leibler information criterion approach	253
5.2. A predictive density accuracy test for comparing multiple misspecified models	254
Acknowledgements	271
Part IV: Appendices and References	271
Appendix A: Assumptions	271
Appendix B: Proofs	275
References	280

PART 2: FORECASTING MODELS

Chapter 6

Forecasting with VARMA Models

HELMUT LUTKEPOHL	287
Abstract	288
Keywords	288
1. Introduction and overview	289
1.1. Historical notes	290
1.2. Notation, terminology, abbreviations	291
2. VARMA processes	292
2.1. Stationary processes	292
2.2. Cointegrated/(I) processes	294
2.3. Linear transformations of VARMA processes	294

<i>Contents</i>	<i>of</i>	<i>Volume</i>	<i>1</i>	xv
2.4. Forecasting				296
2.5. Extensions				305
3. Specifying and estimating VARMA models				306
3.1. The echelon form	-			306
3.2. Estimation of VARMA models for given lag orders and cointegrating rank				311
3.3. Testing for the cointegrating rank			i.	313
3.4. Specifying the lag orders and Kronecker indices				314
3.5. Diagnostic checking				316
4. Forecasting with estimated processes				316
<1.1. General results				316
4.2. Aggregated processes				318
5. Conclusions				319
Acknowledgements				321
References				321

Chapter 7

Forecasting with Unobserved Components Time Series Models

ANDREW HARVEY				327
Abstract				330
Keywords				330
1. Introduction				331
1.1. Historical background				331
1.2. Forecasting performance				333
1.3. State space and beyond				334
2. Structural time series models				335
2.1. Exponential smoothing				336
2.2. Local level model				337
2.3. Trends				339
2.4. Nowcasting				340
2.5. Surveys and measurement error				-343
2.6. Cycles				343
2.7. Forecasting components				344
2.8. Convergence models				347
3. ARIMA and autoregressive models				348
3.1. ARIMA models and the reduced form				348
3.2. Autoregressive models				'350
3.3. Model selection in ARIMA, autoregressive and structural time series models				'-350
3.4. Correlated components				351
4. Explanatory variables and interventions				352
4.1. Interventions				'354
4.2. Time-varying parameters				-355
5. Seasonality				' 355
5.1. Trigonometric seasonal				' • 356

5.2. Reduced form	357
5.3. Nowcasting	358
5.4. Holt-Winters	358
5.5. Seasonal ARIMA models	358
5.6. Extensions	360
6. State space form	361
6.1. Kalman filter	361
6.2. Prediction	363
6.3. Innovations	364
6.4. Time-invariant models	364
6.5. Maximum likelihood estimation and the prediction error decomposition	368
6.6. Missing observations, temporal aggregation and mixed frequency	369
6.7. Bayesian methods	369
7. Multivariate models	370
7.1. Seemingly unrelated times series equation models	370
7.2. Reduced form and multivariate ARIMA models	371
7.3. Dynamic common factors	372
7.4. Convergence	376
7.5. Forecasting and nowcasting with auxiliary series	379
8. Continuous time	383
8.1. Transition equations	383
8.2. Stock variables	385
8.3. Flow variables	387
9. Nonlinear and non-Gaussian models	391
9.1. General state space model	392
9.2. Conditionally Gaussian models	394
9.3. Count data and qualitative observations	394
9.4. Heavy-tailed distributions and robustness	399
9.5. Switching regimes	401
10. Stochastic volatility	403
10.1. Basic specification and properties	404
10.2. Estimation	405
10.3. Comparison with GARCH	405
10.4. Multivariate models	406
11. Conclusions	406
Acknowledgements	407
References	408

Chapter 8

Forecasting Economic Variables with Nonlinear Models

TIMO	TER	AS	VIRTA	413
Abstract				414
Keywords				415

1. Introduction	416
2. Nonlinear models	416
2.1. General	< 416
2.2. Nonlinear dynamic regression model	417
2.3. Smooth transition regression model	• 418
2.4. Switching regression and threshold autoregressive model	420
2.5. Markov-switching model	421
2.6. Artificial neural network model	422
2.7. Time-varying regression model	• 423
2.8. Nonlinear moving average models	424
3. Building nonlinear models	425
3.1. Testing linearity	426
3.2. Building STR models	428
3.3. Building switching regression models	429
3.4. Building Markov-switching regression models	431
4. Forecasting with nonlinear models	431
4.1. Analytical point forecasts	• 431
4.2. Numerical techniques in forecasting	433
4.3. Forecasting using recursion formulas	436
4.4. Accounting for estimation uncertainty	437
4.5. Interval and density forecasts	438
4.6. Combining forecasts	• 438
4.7. Different models for different forecast horizons?	439
5. Forecast accuracy	440
5.1. Comparing point forecasts	440
6. Lessons from a simulation study	444
7. Empirical forecast comparisons	445
7.1. Relevant issues	445
7.2. Comparing linear and nonlinear models	447
7.3. Large forecast comparisons	448
8. Final remarks	451
Acknowledgements	452
References	453

Chapter 9

Approximate Nonlinear Forecasting Methods

HALBERT WHITE	459
Abstract	460
Keywords	460
1. Introduction	461
2. Linearity and nonlinearity	463
2.1. Linearity	463
2.2. Nonlinearity	466

3. Linear, nonlinear, and highly nonlinear approximation	467
4. Artificial neural networks	474
4.1. General considerations	< 474
4.2. Generically comprehensively revealing activation functions	475
5. QuickNet	476
5.1. A prototype QuickNet algorithm	477
5.2. Constructing $T_{j,j}$	479
5.3. Controlling overfit	480
6. Interpretational issues	• 484
6.1. Interpreting approximation-based forecasts	485
6.2. Explaining remarkable forecast outcomes	485
6.3. Explaining adverse forecast outcomes	490
7. Empirical examples	492
7.1. Estimating nonlinear forecasting models	492
7.2. Explaining forecast outcomes	j < 505
8. Summary and concluding remarks	509
Acknowledgements	510
References	510

PART 3: FORECASTING WITH PARTICULAR DATA STRUCTURES

Chapter 10

Forecasting with Many Predictors	• , 515
JAMES H. STOCK AND MARK W. WATSON	515
Abstract	516
Keywords	516
1. Introduction	517
1.1. Many predictors: Opportunities and challenges	517
1.2. Coverage of this chapter	518
2. The forecasting environment and pitfalls of standard forecasting methods	518
2.1. Notation and assumptions	-5 1 8
2.2. Pitfalls of using standard forecasting methods when n is large	519
3. Forecast combination	520
3.1. Forecast combining setup and notation	521
3.2. Large- n forecast combining methods	522
3.3. Survey of the empirical literature	523
4. Dynamic factor models and principal components analysis	524
4.1. The dynamic factor model	525
4.2. DFM estimation by maximum likelihood	527
4.3. DFM estimation by principal components analysis	528
4.4. DFM estimation by dynamic principal components analysis	532
4.5. DFM estimation by Bayes methods	533
4.6. Survey of the empirical literature	533

5. Bayesian model averaging	535
5.1. Fundamentals of Bayesian model averaging	536
5.2. Survey of the empirical literature	541
6. Empirical Bayes methods	542
6.1. Empirical Bayes methods for large- n ; linear forecasting	543
7. Empirical illustration	545
7.1. Forecasting methods	545
7.2. Data and comparison methodology	547
7.3. Empirical results	547
8. Discussion	549
References	550

Chapter 11

Forecasting with Trending Data

GRAHAM ELLIOTT

Abstract	556
Keywords	556
1. Introduction	557
2. Model specification and estimation	559
3. Univariate models	563
3.1. Short horizons	565
3.2. Long run forecasts	575
4. Cointegration and short run forecasts	581
5. Near cointegrating models	586
6. Predicting noisy variables with trending regressors	591
7. Forecast evaluation with unit or near unit roots	596
7.1. Evaluating and comparing expected losses	596
7.2. Orthogonality and unbiasedness regressions	598
7.3. Cointegration of forecasts and outcomes	599
8. Conclusion	600
References	601

Chapter 12

Forecasting with Breaks

MICHAEL P. CLEMENTS AND DAVID F. HENDRY

Abstract	606
Keywords	606
1. Introduction	607
2. Forecast-error taxonomies	609
2.1. General (model-free) forecast-error taxonomy	609
2.2. VAR model forecast-error taxonomy	613
3. Breaks in variance	614
3.1. Conditional variance processes	614

3.2. GARCH model forecast-error taxonomy	...	616
4. Forecasting when there are breaks		617
4.1. Cointegrated vector autoregressions	/	-617
4.2. VECM forecast errors		618 -
4.3. DVAR forecast errors		620
4.4. Forecast biases under location shifts		620
4.5. Forecast biases when there are changes in the autoregressive parameters		621
4.6. Univariate models		622
5. Detection of breaks		622
5.1. Tests for structural change		622
5.2. Testing for level shifts in ARMA models		625
6. Model estimation and specification		627
6.1. Determination of estimation sample for a fixed specification		627
6.2. Updating		630
7. Ad hoc forecasting devices	x^*	631
7.1. Exponential smoothing		631
7.2. Intercept corrections	•	633
7.3. Differencing		634
7.4. Pooling		635
8. Non-linear models		635
8.1. Testing for non-linearity and structural change		636
8.2. Non-linear model forecasts		637
8.3. Empirical evidence		639
9. Forecasting UK unemployment after three crises		640
9.1. Forecasting 1992-2001		643
9.2. Forecasting 1919-1938		645
9.3. Forecasting 1948-1967		645
9.4. Forecasting 1975-1994		647
9.5. Overview		647
10. Concluding remarks		648
Appendix A: Taxonomy derivations for Equation (10)		648
Appendix B: Derivations for Section 4.3		650
References		651

Chapter 13

Forecasting Seasonal Time Series

ERIC GHYSELS, DENISE R. OSBORN AND PAULO M.M. RODRIGUES 659

Abstract 660

Keywords 661

1. Introduction 662

2. Linear models 664

 2.1. SARIMA model 664

 2.2. Seasonally integrated model 666

2.3. Deterministic seasonably model	669
2.4. Forecasting with misspecified seasonal models	672
2.5. Seasonal cointegration	677
2.6. Merging short- and long-run forecasts	681
3. Periodic models	683
3.1. Overview of PAR models	683
3.2. Modelling procedure	685
3.3. Forecasting with univariate PAR models	686
3.4. Forecasting with misspecified models	688
3.5. Periodiccointegration	688
3.6. Empirical forecast-comparisons	690
4. Other specifications	691
4.1. Nonlinear models	691
4.2. Seasonality in variance	696
5. Forecasting, seasonal adjustment and feedback	701
5.1. Seasonal adjustment and forecasting	702
5.2. Forecasting and seasonal adjustment	703
5.3. Seasonal adjustment and feedback	704
6. Conclusion	705
References	706

PART 4: APPLICATIONS OF FORECASTING METHODS

Chapter 14

Survey Expectations

M. HASHEM PESARAN AND MARTIN WEALE

Abstract	716
Keywords	716
1. Introduction	717
2. Concepts and models of expectations formation	720
2.1. The rational expectations hypothesis	721
2.2. Extrapolative models of expectations formation	724
2.3. Testable implications of expectations formation models	727
2.4. Testing the optimality of survey forecasts under asymmetric losses	730
3. Measurement of expectations: History and developments	733
3.1. Quantification and analysis of qualitative survey data	739
3.2. Measurement of expectations uncertainty	744
3.3. Analysis of individual responses	745
4. Uses of survey data in forecasting	748
4.1. Forecast combination	749
4.2. Indicating uncertainty	749
4.3. Aggregated data from qualitative surveys	751
5. Uses of survey data in testing theories: Evidence on rationality of expectations	754

5.1. Analysis of quantified surveys, econometric issues and findings	755
5.2. Analysis of disaggregate qualitative data	764
6. Conclusions	/ 767
Acknowledgements	768
Appendix A: Derivation of optimal forecasts under a 'Lin-Lin' cost function	768
Appendix B: References to the main sources of expectational data	769
References	770
 <i>Chapter 15</i>	
Volatility and Correlation Forecasting	
TORBEN G. ANDERSEN, TIM BOLLERSLEV, PETER F. CHRISTOFFERSEN AND FRANCIS X. DIEBOLD	
Abstract	777
Keywords	779
1. Introduction	I i 780
1.1. Basic notation and notions of volatility	781
1.2. Final introductory remarks	786
2. Uses of volatility forecasts	786
2.1. Generic forecasting applications	787
2.2. Financial applications	789
2.3. Volatility forecasting in fields outside finance	796
2.4. Further reading	797
3. GARCH volatility	798
3.1. Rolling regressions and RiskMetrics	798
3.2. GARCH(1, 1)	800
3.3. Asymmetries and "leverage" effects	803
3.4. Long memory and component structures	805
3.5. Parameter estimation	807
3.6. Fat tails and multi-period forecast distributions	809
3.7. Further reading	812
4. Stochastic volatility	814
4.1. Model specification	815
4.2. Efficient method of simulated moments procedures for inference and forecasting	823
4.3. Markov Chain Monte Carlo (MCMC) procedures for inference and forecasting	826
4.4. Further reading	828
5. Realized volatility	830
5.1. The notion of realized volatility	830
5.2. Realized volatility modeling	834
5.3. Realized volatility forecasting	835
5.4. Further reading	837
6. Multivariate volatility and correlation	839
6.1. Exponential smoothing and RiskMetrics	840
6.2. Multivariate GARCH models	841

6.3. Multivariate GARCH estimation	843
6.4. Dynamic conditional correlations	845
6.5. Multivariate stochastic volatility and factor models	847
6.6. Realized covariances and correlations	849
6.7. Further reading	851
7. Evaluating volatility forecasts	853
7.1. Point forecast evaluation from general loss functions	854
7.2. Volatility forecast evaluation	855
7.3. Interval forecast and Value-at-Risk evaluation	859
7.4. Probability forecast evaluation and market timing tests	860
7.5. Density forecast-evaluation	861
7.6. Further reading	863
8. Concluding remarks	864
References	865

Chapter 16

Leading Indicators

MASSTMILIANO MARCELLINO

Abstract	879
Keywords	880
1. Introduction	880
2. Selection,of the target and leading variables	881
2.1. Choice of target variable	884
2.2. Choice of leading variables	885
3. Filtering and dating procedures	887
4. Construction of nonmodel based composite indexes	889
5. Construction of model based composite coincident indexes	894
5.1. Factor based CCI	894
5.2. Markov switching based CCI	897
6. Construction of model based composite leading indexes	901
6.1. VAR based CLI	901
6.2. Factor based CLI	908
6.3. Markov-switching based CLI	912
7. Examples of composite coincident and leading indexes	915
7.1. Alternative CCIs for the US	915
7.2. Alternative CLIs for the US	918
8. Other approaches for prediction with leading indicators	925
8.1. Observed transition models	925
8.2. Neural networks and nonparametric methods	927
5.3. Binary models	930
•8.4. Pooling	933
9. Evaluation of leading indicators	934
9.1. Methodology	934

9.2. Examples	937
10. Review of the recent literature on the performance of leading indicators	945
10.1. The performance of the new models with real time data	946
10.2. Financial variables as leading indicators	947
10.3. The 1990-1991 and 2001 US recessions	949
11. What have we learned?	951
References	952

Chapter 17

Forecasting with Real-Time Macroeconomic Data	
DEAN CROUSHORE	961
Abstract	962
Keywords	962
1. An illustrative example: The index of leading indicators	963
2. The real-time data set for macroeconomists	964
How big are data revisions?	967
3. Why are forecasts affected by data revisions?	969
Experiment 1: Repeated observation forecasting	971
Experiment 2: Forecasting with real-time versus latest-available data samples	972
Experiment 3: Information criteria and forecasts	974
4. The literature on how data revisions affect forecasts	974
How forecasts differ when using first-available data compared with latest-available data	974
Levels versus growth rates	976
Model selection and specification	977
Evidence on the predictive content of variables	978
5. Optimal forecasting when data are subject to revision	978
6. Summary and suggestions for further research	980
References	981

Chapter 18

Forecasting in Marketing	
PHILIP HANS FRANSES	983
Abstract	984
Keywords	984
1. Introduction	985
2. Performance measures	986
2.1. What do typical marketing data sets look like?	986
2.2. What does one want to forecast?	991
3. Models typical to marketing	992
3.1. Dynamic effects of advertising	993
3.2. The attraction model for market shares	997
3.3. The Bass model for adoptions of new products	999
3.4. Multi-level models for panels of time series	1001

4. Deriving forecasts	J003
4.1. Attraction model forecasts	1004
4.2. Forecasting market shares from models for sales	1005
4.3. Bass model forecasts	1006
4.4. Forecasting duration data	1008
5. Conclusion	1009
