<i>Preface</i>	xv
<i>List of Abbreviations</i>	xviii
<i>Introduction</i>	1
PART I PRODUCTION	
1 Construction and value added	3
Introduction	3
Denning the construction sector of production	4
Is the construction sector really several different industries?	11
Factors of production	13
The structure of value added in the production of the built environment	16
Input-output analysis and the value added by the construction sector.	19
Gross and net profit	23
Concluding remarks	23
Appendix: Standard Industrial Classification, 1992	25
2 The capitalist construction industry labour market	29
Introduction	29
The technological and social relations of production	30
Labour markets	32
The supply and demand for labour	33
Inefficient labour markets and non-clearing labour markets	39
The dual labour market	42
Construction labour	44
The role of collective bargaining in construction	47
Supply and demand in labour markets - a theory of construction wages and employment	51
Formal and real subsumption of labour by capital	55

The use of labour in the construction industry	56
Structure of the construction labour force	58
Concluding remarks	59
3 Productivity and the production of profits	61
Introduction	61
Productivity	61
Average net productivity	65
Alternative estimates of level and rate of change of construction productivity	66
Rate of increase in productivity: alternative estimates	68
Marginal productivity theory	71
The production function	73
The production of profit	74
Unit labour costs and labour and profit shares in output	75
Division of labour in the construction industry	76
Concluding remarks	78
 PART II ACCOUNTING FOR PRODUCTION AND ASSETS	
4 The logic of accounts	81
Introduction	81
The structure of national accounts	81
The logic of national accounts statistics	85
Income	87
National income and the standard of living or economic welfare	90
Output	91
Domestic and national product	92
'Output' from real estate	92
Accuracy and reliability of the components of the National Accounts	95
Expenditure	95
The structure of company accounts	96
The production account	97
The appropriation account	98
The capital account	100
The financial account	101
National accounts again - the composition of national income	104
National and expenditure in the corporate sector	105
Stocks and flows of the construction industry	108
Concluding remarks	111

5	Value of stock and flows of built capital at national level	113
	Introduction	113
	The valuation of property and real estate	113
	The capital stock in the National Accounts	115
	Types of fixed capital stock	118
	The valuation of fixed capital in the National Accounts	121
	Stocks of capital and flows of investment	123
	Retirements of built stock, life-spans and replacement demand	126
	Concluding remarks	128
6	Ownership of and investment in built stock and land	129
	Introduction	129
	The book value of assets	129
	Devalorisation	132
	Schumpeterian innovation, super-profits and revalorisation	134
	Techniques of valuation of buildings	136
	Payback period	137
	Life cycle investment appraisal models	138
	Discounting	139
	The creation of money and credit by financial institutions	141
	Landowners and capitalists in the development process	141
	Concluding remarks	145

PART III THE NATURE OF THE CONSTRUCTION PROCESS

7	Actors and roles	149
	Introduction	149
	The nature of construction as a process	149
	The nature of team-working in construction	150
	Systems and their main types of actor	164
	Speculative builders and contractors	166
	Construction as a manufacturing process	167
	Other roles in the process	167
	Projects and firms	171
	Portfolio risk management costs	176
	Concluding remarks	179
8	The contracting system	180
	Introduction	180
	Fragmentation and innovation in the development process	180

The contracting system	188
Concluding remarks	190

Part IV Construction and the Economy

9 Construction investment, the multiplier and the accelerator 195

Introduction	195
Aggregate construction demand	197
The multiplier	206
The accelerator	209
Change-induced demand for buildings and works	217
Concluding remarks	218

10 Business cycles and construction 222

Introduction	222
A profit-led model of private sector investment demand and of business cycles	222
Cycles	226
Trend and cycle	227
Business cycles	229
The 9-stage business cycle: a method of description of business cycles	230
Measurement of construction demand	237
GDP and aggregate construction demand	245
Product cycles and the trend rate of change in aggregate construction demand	250
Economic development and the trend in construction demand	254
Building cycles	255
Price fluctuations	256
Concluding remarks	258
