

CONTINUOUS-TIME FINANCE

Robert C. Merton

Foreword by
Paul A. Samuelson

Basil Blackwell

Contents

Foreword by Paul A. Samuelson	xi
Preface	xiii

Part I: Introduction to Finance and the Mathematics of Continuous-Time Models

1	Modern Finance	3
2	Introduction to Portfolio Selection and Capital Market Theory: Static Analysis	16
2.1	Introduction	16
2.2	One-Period Portfolio Selection	17
2.3	Risk Measures for Securities and Portfolios in the One-Period Model	25
2.4	Spanning, Separation, and Mutual-Fund Theorems	33
3	On the Mathematics and Economics Assumptions of Continuous-Time Models	57
3.1	Introduction	57
3.2	Continuous-Sample-Path Processes with "No Rare Events"	65
3.3	Continuous-Sample-Path Processes with "Rare Events"	81
3.4	Discontinuous-Sample-Path Processes with "Rare Events"	86

Part II: Optimum Consumption and Portfolio Selection in Continuous-Time Models

4	Lifetime Portfolio Selection Under Uncertainty: The Continuous-Time Case	97
---	--	----

4.1	Introduction	97
4.2	Dynamics of the Model: The Budget Equation	98
4.3	The Two-Asset Model	100
4.4	Constant Relative Risk Aversion	104
4.5	Dynamic Behavior and the Bequest Valuation Function	106
4.6	Infinite Time Horizon	108
4.7	Economic Interpretation of the Optimal Decision Rules for Portfolio Selection and Consumption	111
4.8	Extension to Many Assets	116
4.9	Constant Absolute Risk Aversion	117
4.10	Other Extensions of the Model	119
5	Optimum Consumption and Portfolio Rules in a Continuous-Time Model	120
5.1	Introduction	120
5.2	A Digression on Ito Processes	121
5.3	Asset-Price Dynamics and the Budget Equation	124
5.4	Optimal Portfolio and Consumption Rules: The Equations of Optimality	127
5.5	Log-Normality of Prices and the Continuous-Time Analog to Tobin-Markowitz Mean-Variance Analysis	131
5.6	Explicit Solutions for a Particular Class of Utility Functions	137
5.7	Noncapital Gains Income: Wages	143
5.8	Poisson Processes	145
5.9	Alternative Price Expectations to the Geometric Brownian Motion	151
5.10	Conclusion	164
6	Further Developments in the Theory of Optimal Consumption and Portfolio Selection	166
6.1	Introduction	166
6.2	The Cox-Huang Alternative to Stochastic Dynamic Programming	169
6.3	Optimal Portfolio Rules When the Nonnegativity Constraint on Consumption is Binding	184
6.4	Generalized Preferences and Their Impact on Optimal Portfolio Demands	201
		-

Part III: Warrant and Option Pricing Theory

7	A Complete Model of Warrant Pricing that Maximizes Utility (with Paul A. Samuelson)	215
7.1	Introduction	215
7.2	Cash-Stock Portfolio Analysis	215
7.3	Recapitulation of the 1965 Samuelson Model	220
7.4	Determining Average Stock Yield	223
7.5	Determining Warrant Holdings and Prices	224
7.6	Digression: General Equilibrium Pricing	227
7.7	Utility-Maximizing Warrant Pricing: The Important "Incipient" Case	229
7.8	Explicit Solutions	231
7.9	Warrants Never to be Converted	235
7.10	Exact Solution to the Perpetual Warrant Case	236
7.11	Illustrative Example	239
7.12	Proof of the Superiority of Yield of Warrants Over Yield of Common Stock	243
7.13	Conclusion	245
8	Theory of Rational Option Pricing	255
8.1	Introduction	255
8.2	Restrictions on Rational Option Pricing	256
8.3	Effects of Dividends and Changing Exercise Price	268
8.4	Restrictions on Rational Put Option Pricing	276
8.5	Rational Option Pricing along Black-Scholes Lines	281
8.6	An Alternative Derivation of the Black-Scholes Model	284
8.7	Extension of the Model to Include Dividend Payments and Exercise Price Changes	294
8.8	Valuing an American Put Option	298
8.9	Valuing the "Down-and-Out" Call Option	300
8.10	Valuing a Callable Warrant	303
8.11	Conclusion	305
9	Option Pricing When Underlying Stock Returns are Discontinuous	309
9.1	Introduction	309
9.2	The Stock-Price and Option-Price Dynamics	312
9.3	An Option Pricing Formula	318
9.4	A Possible Answer to an Empirical Puzzle	« 324

10	Further Developments in Option Pricing Theory	330
10.1	Introduction	330
10.2	Cox-Ross "Risk-Neutral" Pricing and the Binomial Option Pricing Model	334
10.3	Pricing Options on Futures Contracts	347
<i>Part IV: Contingent-Claims Analysis in the Theory of Corporate Finance and Financial Intermediation</i>		
11	A Dynamic General Equilibrium Model of the Asset Market and Its Application to the Pricing of the Capital Structure of the Firm	357
11.1	Introduction	357
11.2	A Partial-Equilibrium One-Period Model	358
11.3	Some Examples	361
11.4	A General Intertemporal Equilibrium Model of the Asset Market	367
11.5	Model I: A Constant Interest Rate Assumption	373
11.6	Model II: The "No Riskless Asset" Case	380
11.7	Model III: The General Model	382
11.8	Conclusion	386
12	On the Pricing of Corporate Debt: The Risk Structure of Interest Rates	388
12.1	Introduction	388
12.2	On the Pricing of Corporate Liabilities	389
12.3	On the Pricing of "Risky" Discount Bonds	392
12.4	A Comparative Statics Analysis of the Risk Structure	396
12.5	On the Modigliani-Miller Theorem with Bankruptcy	404
12.6	On the Pricing of Risky Coupon Bonds	409
12.7	Conclusion	411
13	On the Pricing of Contingent Claims and the Modigliani-Miller Theorem	413
13.1	Introduction	413
13.2	A General Derivation of a Contingent-Claim Price	415
13.3	On the Modigliani-Miller Theorem with Bankruptcy	419
13.4	Applications of Contingent-Claims Analysis in Corporate Finance	423

14	Financial Intermediation in the Continuous-Time Model	428
14.1	Introduction	428
14.2	Derivative-Security Pricing with Transactions Costs	432
14.3	Production Theory for Zero-Transaction-Cost Financial Intermediaries	441
14.4	Risk Management for Financial Intermediaries	450
14.5	On the Role of Efficient Financial Intermediation in the Continuous-Time Model	457
14.6	Afterword: Policy and Strategy in Financial Intermediation	467
 <i>Part V: An Intertemporal Equilibrium Theory of Finance</i>		
15	An Intertemporal Capital Asset Pricing Model	475
15.1	Introduction	475
15.2	Capital Market Structure	477
15.3	Asset Value and Rate of Return Dynamics	478
15.4	Preference Structure and Budget-Equation Dynamics	484
15.5	The Equations of Optimality: The Demand Functions for Assets	485
15.6	Constant Investment Opportunity Set	488
15.7	Generalized Separation: A Three-Fund Theorem	490
15.8	The Equilibrium Yield Relation among Assets	493
15.9	Empirical Evidence	496
15.10	An (m+2)-Fund Theorem and the Security Market Hyperplane	499
15.11	The Consumption-Based Capital Asset Pricing Model	512
15.12	Conclusion	519
16	A Complete-Markets General Equilibrium Theory of Finance in Continuous Time	524
16.1	Introduction	524
16.2	Financial Intermediation with Dynamically- Complete Markets	528
16.3	Optimal Consumption and Portfolio Rules with Dynamically-Complete Markets	537
16.4	General Equilibrium: The Case of Pure Exchange	549
16.5	General Equilibrium: The Case of Production	554

16.6	A General Equilibrium Model in which the Capital Asset Pricing Model Obtains	558
16.7	Conclusion	574
<i>Part VI: Applications of the Continuous-Time Model to Selected Issues in Public Finance: Long-Run Economic Growth, Public Pension Plans' Deposit Insurance, and Loan Guarantees</i>		
17	An Asymptotic Theory of Growth Under Uncertainty	579
17.1	Introduction	579
17.2	The Model	580
17.3	The Steady-State Distribution for k	584
17.4	The Cobb-Douglas/Constant-Savings-Function Economy	586
17.5	The Stochastic Ramsey Problem	592
18	On Consumption-Indexed Public Pension Plans	606
18.1	Introduction	606
18.2	A Simple Intertemporal Equilibrium Model	609
18.3	On the Merits and Feasibility of a Consumption-Indexed Public Plan	616
19	An Analytic Derivation of the Cost of Deposit Insurance and Loan Guarantees: An Application of Modern Option Pricing Theory	625
19.1	Introduction	625
19.2	A Model for Pricing Deposit Insurance	627
20	On the Cost of Deposit Insurance When There are Surveillance Costs	634
20.1	Introduction	634
20.2	Assumptions of the Model	635
20.3	The Evaluation of Federal Deposit Insurance Corporation Liabilities	637
20.4	The Evaluation of Bank Equity	642
20.5	On the Equilibrium Deposit Rate	644
20.6	Conclusion	646
	Bibliography	649
	Author Index	677
	Subject Index	684
