List of Tables	xxv
List of Intermezzos	xxvii

I Intermediate macroeconomics	1
1 Review of the AD-AS model	3
1.1 The aggregate labour market	3
1.1.1 The demand for labour	3
1.1.2 The supply of labour	7
1.1.3 Aggregate supply in the goods market: Adaptive expectations	12
1.1.4 Nominal wage rigidities	15
1.2 Aggregate demand: Review of the IS-LM model	15
1.2.1 The demand for money	16
1.2.2 The IS-LM model	18
1.2.3 The AD curve	19
1.2.4 Effectiveness of fiscal policy	20
1.3 Schools in macroeconomics	21
1.3.1 Classical economists	21
1.3.2 Keynesians	23
1.3.3 The neo-Keynesian synthesis	23
1.3.4 The monetarists	25
1.3.5 New classical economists	27
1.3.6 Supply siders	27
1.3.7 New Keynesians	28
1.4 Punchlines	29
2 The open economy	33
2.1 Some international bookkeeping	33
2.2 The IS-LM model for a small open economy	35
2.2.1 Fixed exchange rates and immobile capital	37
2.2.2 Fixed exchange rates and perfect capital mobility	39
2.2.3 Flexible exchange rates with perfect capital mobility	40
2.2.4 Imperfect capital mobility	44
2.3 Aggregate supply considerations	47
2.3.1 The Armington approach	47
2.3.2 The extended Mundell-Fleming model	51

2.4	Transmission of shocks in a two-country world	58
2.4.1	Nominal wage rigidity in both countries	60
2.4.2	Real wage rigidity in both countries	63
2.4.3	Real wage rigidity in Europe and nominal wage rigidity in the United States	65
2.5	Punchlines	69
	Appendix: Analysing two-country models	71
3	Dynamics in aggregate demand and supply	75
3.1	What is stability?	75
3.2	Adaptive expectations and stability	77
3.3	Investment, the capital stock, and stability	82
3.3.1	Adjustment costs and investment	83
3.3.2	Stability	88
3.4	Wealth effects and the government budget constraint	92
3.4.1	Short-run macroeconomic equilibrium	94
3.4.2	Money finance	95
3.4.3	Bond finance	97
3.5	A first look at hysteresis★	100
3.5.1	Alienation of the unemployed	100
3.5.2	History matters	103
3.6	Punchlines	105
4	Perfect foresight and economic policy	109
4.1	Dynamic investment theory	109
4.1.1	The basic model	109
4.1.2	Fiscal policy: Investment subsidy	114
4.2	A dynamic IS-LM model	129
4.3	Exchange rate expectations and fiscal and monetary policy	136
4.3.1	The Dornbusch model	137
4.3.2	Price stickiness and overshooting	142
4.4	Punchlines	145
5	Rational expectations and economic policy	147
5.1	What are rational expectations?	147
5.1.1	The basic idea	147
5.1.2	Do we really believe the idea?	154
5.2	Applications of the REH in macroeconomics	155
5.3	Should we take the PIP seriously?	160
5.3.1	One-period nominal wage contracts	161
5.3.2	Overlapping wage contracts	163
5.4	Rational expectations in a small open economy★	168
5.4.1	Unmanaged economy	170
5.4.2	Introduction to Dynare	176
5.4.3	Managed economy	183
5.5	Punchlines	186

6	The government budget deficit	191
6.1	Ricardian equivalence	191
6.1.1	A simple model	192
6.1.2	Distorting taxes	200
6.1.3	Borrowing restrictions	205
6.1.4	Finite lives	207
6.1.5	Some further reasons for Ricardian non-equivalence	211
6.1.6	Empirical evidence	212
6.2	The theory of government debt creation	213
6.2.1	A simple model of tax smoothing	213
6.2.2	Implications from the tax smoothing model	219
6.3	Punchlines	222
7	A closer look at the labour market	225
7.1	Some stylized facts	225
7.2	Standard macroeconomic labour market theory	230
7.2.1	Skilled and unskilled labour	230
7.2.2	The effects of taxation	237
7.2.3	The Holy Grail of macroeconomics	244
7.3	Trade unions and the labour market	244
7.3.1	Unions in partial equilibrium	245
7.3.2	Unions in general equilibrium	253
7.3.3	Unions and real wage rigidity	256
7.4	Efficiency wages and the labour market	257
7.4.1	Efficiency wages in partial equilibrium	258
7.4.2	Efficiency wages in general equilibrium	260
7.5	Punchlines	263
8	Search in the labour market	267
8.1	Search in the labour market	267
8.1.1	A canonical two-sided search model	268
8.1.2	Market equilibrium	276
8.1.3	Comparative static effects	277
8.1.4	Efficiency	281
8.2	Applications of the canonical search model	282
8.2.1	The effects of taxation	282
8.2.2	Deposits on workers?	284
8.3	Endogenous job destruction★	286
8.3.1	Basic assumptions	286
8.3.2	Model	289
8.3.3	Market equilibrium	292
8.4	Punchlines	294
9	Dynamic inconsistency in public and private decision making	297
9.1	Dynamic inconsistency	297
9.1.1	A classic tale	297
9.1.2	A neoclassical tale	298
9.1.3	Reputation as an enforcement mechanism	302
9.2	The voting approach to optimal inflation	306
9.3	Dynamic consistency and capital taxation	309
9.3.1	The first-best optimum	309

9.3.2	The second-best problem	311
9.3.3	Dynamic inconsistency of the optimal tax plan	315
9.4	Are consumers dynamically inconsistent?	316
9.4.1	A dynamically consistent consumer	317
9.4.2	A dynamically inconsistent consumer	319
9.5	Punchlines	323
 II Towards advanced macroeconomics		 327
10	Money	329
10.1	Functions of money	329
10.2	Modelling money as a medium of exchange	332
10.2.1	Setting the stage	332
10.2.2	Shopping costs	334
10.2.3	Money in the utility function	336
10.3	Money as a store of value	337
10.3.1	Overlapping-generations model of money	339
10.3.2	Uncertainty and the demand for money	343
10.4	The optimal quantity of money	356
10.4.1	A basic general equilibrium model	356
10.4.2	The satiation result	358
10.4.3	Critiques of the full liquidity rule	360
10.5	Punchlines	364
11	New Keynesian economics	367
11.1	Reconstructing the "Keynesian" multiplier	367
11.1.1	A static model with monopolistic competition	368
11.1.2	The short-run balanced-budget multiplier	374
11.1.3	The short-run multiplier in isolation	376
11.1.4	The "long-run" multiplier	376
11.1.5	Welfare effects	381
11.2	Monopolistic competition and money	383
11.3	Sticky prices and the non-neutrality of money	386
11.3.1	Menu costs	386
11.3.2	Quadratic price adjustment costs	401
11.3.3	Staggered price contracts	402
11.4	Punchlines	404
12	Exogenous economic growth—Solow-Swan	407
12.1	Stylized facts of economic growth	407
12.2	The Solow-Swan model	408
12.2.1	No technological progress	409
12.2.2	Technological progress	411
12.3	Properties of the Solow-Swan model	413
12.3.1	The golden rule of capital accumulation	413
12.3.2	Transitional dynamics and convergence	416
12.3.3	The speed of adjustment	417
12.3.4	Human capital to the rescue	419
12.4	Macroeconomic applications of the Solow-Swan model	422

12.4.1	Fiscal policy in the Solow model	422
12.5	Two-sector model	425
12.6	Punchlines	431
13	Exogenous economic growth—Ramsey-Cass-Koopmans	433
13.1	The Ramsey-Cass-Koopmans model	433
13.1.1	The representative household	434
13.1.2	The representative firm	439
13.1.3	The phase diagram	440
13.2	Properties of the Ramsey-Cass-Koopmans model	442
13.2.1	Efficiency	442
13.2.2	Transitional dynamics and convergence	443
13.3	Macroeconomic applications of the Ramsey-Cass-Koopmans model	444
13.3.1	Fiscal policy in the Ramsey-Cass-Koopmans model	444
13.3.2	Ricardian equivalence once again	446
13.4	An open-economy RCK model	447
13.4.1	Some model complications	447
13.4.2	Model solution and convergence speed	450
13.4.3	Effects of an investment subsidy	454
13.5	The RCK model with endogenous labour supply	456
13.5.1	Model elements	456
13.5.2	The phase diagram	458
13.5.3	Permanent fiscal policy	461
13.5.4	Temporary fiscal policy	468
13.6	The RCK model with search unemployment	474
13.6.1	Model elements	474
13.6.2	Is unemployment efficient?	480
13.6.3	Transitional dynamics	482
13.7	A monetary RCK model	485
13.7.1	Model elements	485
13.7.2	Equilibrium	494
13.7.3	Monetary neutrality?	494
13.8	Punchlines	496
	Appendix: Phase diagram for the unit-elastic RCK model	499
14	Endogenous economic growth	505
14.1	Introduction	505
14.2	“Capital-fundamentalist” models	506
14.2.1	Factor substitutability	506
14.2.2	AK models	509
14.3	Human capital formation	521
14.3.1	Steady-state growth	524
14.3.2	Transitional dynamics	526
14.3.3	Concluding remarks	527
14.4	Endogenous technology	528
14.4.1	R&D and expanding input variety	528
14.4.2	R&D and rising input quality	537
14.5	Punchlines	546

15	Overlapping generations in continuous time	549
15.1	Introduction	549
15.2	Individual behaviour under lifetime uncertainty	549
15.2.1	Yaari's lessons	549
15.2.2	Realistic mortality profile	558
15.3	Macroeconomic consequences of lifetime uncertainty	563
15.3.1	Individual households	564
15.3.2	Aggregate households	565
15.3.3	Firms	567
15.3.4	Government and market equilibrium	568
15.3.5	Phase diagram	569
15.4	Basic model properties	570
15.4.1	Fiscal policy	570
15.4.2	Non-neutrality of government debt	572
15.4.3	Economic growth	572
15.4.4	Dynamic efficiency	573
15.4.5	Small open economy	578
15.5	Endogenous labour supply	584
15.5.1	Model elements	585
15.5.2	Phase diagram	587
15.5.3	Raising the consumption tax	590
15.5.4	Quantitative evidence	594
15.6	Punchlines	598
	Appendix: Derivation of the phase diagram	601
16	Overlapping generations in discrete time	605
16.1	The Diamond-Samuelson model	605
16.1.1	Households	606
16.1.2	Firms	607
16.1.3	Market equilibrium	608
16.1.4	Dynamics and stability	609
16.1.5	Efficiency	610
16.2	Social security and the macroeconomy	612
16.2.1	Pensions	612
16.2.2	PAYG pensions and endogenous retirement	625
16.2.3	The macroeconomic effects of ageing	633
16.3	The tragedy of annuitization	635
16.4	Further applications of the DS model	639
16.4.1	Human capital accumulation	639
16.4.2	Public investment	650
16.4.3	Endogenous fertility	659
16.5	Punchlines	663
III	Stochastic general equilibrium macroeconomics	669
17	Decision making in a stochastic environment	671
17.1	Introduction	671
17.2	Dynamic programming in a deterministic world	671
17.2.1	Finite planning horizon	672

17.2.2	Infinite planning horizon	679
17.3	Dynamic programming in a stochastic world	683
17.3.1	Finite planning horizon	683
17.3.2	Infinite planning horizon	693
17.4	Complete markets and Arrow-Debreu securities	695
17.4.1	Model	696
17.4.2	Pareto optimal allocation	697
17.4.3	Decentralization with Arrow-Debreu securities	698
17.5	Constructing the representative agent	701
17.6	Punchlines	702
18	Dynamic Stochastic General Equilibrium—New Classical models	705
18.1	The Lucas research programme	705
18.2	Building the unit-elastic RBC model	707
18.2.1	Households	707
18.2.2	Firms	711
18.3	Model analysis	713
18.3.1	Loglinearized model	713
18.3.2	The shock process	719
18.3.3	Impulse-response functions	719
18.3.4	Correlations	731
18.3.5	A detour: Dynare comes to the rescue	732
18.4	Extending the model	733
18.4.1	Employment variability puzzle	735
18.4.2	Productivity puzzle	739
18.4.3	Unemployment	740
18.5	Punchlines	740
	Appendix: On the unit-elastic RBC model	744
19	Dynamic Stochastic General Equilibrium—New Keynesian models	749
19.1	Introduction	749
19.2	Building an MBC model	750
19.2.1	Firms	751
19.2.2	Households	758
19.2.3	Macroeconomic equilibrium	761
19.3	The canonical New Keynesian DSGE model	762
19.3.1	Preliminary steps (without apologies)	765
19.3.2	Stability	769
19.3.3	Interest rate setting, instability, and Taylor rules	772
19.4	Back to the general case	774
19.4.1	Calibration	775
19.4.2	Computation	777
19.4.3	Visualizing some shocks	778
19.5	Estimation rather than calibration	786
19.5.1	Model features	789
19.5.2	Model calibration and estimation	790
19.5.3	Main findings	791
19.6	Critics	791
19.6.1	New Classical critics	792
19.6.2	New Keynesian critics	793
19.7	Punchlines	794

Mathematical Appendix	797
A.1 Introduction	797
A.2 Matrix algebra	797
A.2.1 General	797
A.2.2 Addition, subtraction, multiplication	797
A.2.3 Transposition	798
A.2.4 Square matrices	798
A.2.5 Cramer's Rule	801
A.2.6 Characteristic roots and vectors	802
A.2.7 Literature	804
A.3 Implicit function theorem	804
A.3.1 Single equation	804
A.3.2 System of equations	806
A.3.3 Literature	807
A.4 Static optimization	808
A.4.1 Unconstrained optimization	808
A.4.2 Equality constraints	809
A.4.3 Inequality constraints	810
A.4.4 Literature	812
A.5 Single differential equations	813
A.5.1 First-order (constant coefficients)	813
A.5.2 First-order (variable coefficients)	814
A.5.3 Leibnitz's rule	815
A.5.4 Literature	815
A.6 Systems of differential equations	816
A.6.1 The Laplace transform	816
A.6.2 Simple applications	819
A.6.3 Systems of differential equations	821
A.6.4 Hysteretic models	826
A.6.5 Literature	830
A.7 Difference equations	830
A.7.1 Basic methods	830
A.7.2 The z-transform	831
A.7.3 Simple application	832
A.7.4 The saddle-path model	833
A.7.5 Literature	834
A.8 Dynamic optimization in continuous time	834
A.8.1 From Lagrange to the Optimum Principle	834
A.8.2 Unconstrained	837
A.8.3 (In)equality constraints	839
A.8.4 Second-order conditions	839
A.8.5 Literature	840
Bibliography	841
Index	891
