## PART ONE: INTRODUCTION

<b>1 General Introduction</b>	<b>3</b>
1.1 Sustainability	4
1.2 Potential for / Constraints on Sustainable Development	7
1.2.1 Monetary Economics	7
1.2.2 Bio-Physical Economics	10
1.2.2a Bio-diversity	11
1.2.2b Land use	11
1.2.2c Use of materials	13
1.2.2d Energy use	15
1.2.2e Conclusion	15
1.2.3 Complementarity of Economic and Bio-Physical Constraints	16
1.3 The Energy <i>Problem</i>	18
1.3.1 Energy Sources	18
1.3.2 Environmental Sinks of Energy Use	22
1.3.3 Conclusion	22
1.4 (Energy) Models	25
1.4.1 General	25
1.4.2 Energy Forecast Models	27
1.4.3 Backcasting Models	28
1.5 Scope of this Book	28

## **PART TWO: TRANSITION MODELLING FRAMEWORK**

<b>2</b>	<b>Introduction to the Transition Models</b>	<b>41</b>
2.1	General Outline	41
2.2	World Energy Use and Human Activity	42
2.2.1	The Ehrlich/Holdren Equation	42
2.2.2	Population	44
2.2.3	Material Wealth	45
2.2.4	Energy Intensity	46
2.2.5	Integration: (Energy) Services	46
2.2.6	Conclusion	53
2.3	Energy Constraints on the Final Sustainable Situation	54
	Appendix to Chapter 2	58
<b>3</b>	<b>The Basic Model</b>	<b>67</b>
3.1	Energy Demand	67
3.2	Energy Supply	71
3.3	Constraints	73
3.3.1	Resources	73
3.3.2	CO <sub>2</sub>	74
3.4	Sample Calculations	76
3.5	Sensitivity Analysis	91
3.5.1	'Gasification'	91
3.5.2	Changing the Equity Year	94
3.6	Conclusion	99
<b>4</b>	<b>Extension with the Primary-Energy Supply System</b>	<b>105</b>
4.1	Introduction	105
4.2	The Energy Requirement for Energy	107
4.2.1	General	107
4.2.2	Fossil Fuels	113
4.2.3	Solar Energy	114
4.2.3a	Construction of solar power plants	114
4.2.3b	Making the output available	117
4.2.3c	De-centralized PV	117
4.2.3d	Conclusion	118
4.2.4	Other Renewables and Fuel-Wood	118
4.2.5	Nuclear Energy	119
4.3	Sample Calculations	120
4.4	Sensitivity Analysis	130
4.5	Conclusion	134

<b>5. Extension with the Materials Supply System</b>	<b>139</b>
5.1 Introduction	139
5.2 Total Demand for Materials	142
5.3 Energy Use per Unit of Material	143
5.3.1 Recycling	144
5.3.2 Substitution of One Material for Another	148
5.3.3 Efficiency Improvement of Production Processes	149
5.3.4 Scarcity	150
5.3.5 Combined Effects on a Steady State	160
5.4 Sample Calculations	161
5.5 Conclusion	171
<b>6 Evaluation of the Model Structures and Future Options</b>	<b>177</b>
6.1 General	177
6.2 Further Developments of the Model	180
6.2.1 Options Within the Existing Model	180
6.2.2 External Links to the Model	181
6.2.3 Educational Gaming	182
Appendix to Chapter 6	184
 <b>PART THREE: DISCUSSION</b>	
<b>7 Conclusion and Comparison to Other Studies</b>	<b>193</b>
7.1 General Conclusions from the Sample Calculations	193
7.2 Comparison to Other Studies	195
7.2.1 The Brundtland Report	196
7.2.2 The IIASA Forecast from <i>Energy in a Finite World</i>	200
7.2.3 Goldemberg's End-Use Global Energy Strategy	204
7.2.4 The Greenpeace Report	208
7.2.5 The CPB Scenarios	212
7.2.6 Other Energy Scenario Studies	220
7.2.6a IPCC	220
7.2.6b University of Tokyo	220
7.2.6c Sanyo	221
7.3 Conclusion	221
<b>8 Reflections</b>	<b>225</b>
8.1 General	226
8.2 Initiatives for Transition	231
8.3 Economy and Environment	235
8.4 Epilogue	242

Appendix to Chapter 8	244
