Table of contents

Summary	1
Introduction	1
Chapter 1: Multivariate GARCH models for the exchange rates and CCC	17
Chapter 2: Multivariate GARCH models with time-dependent correlations (dvec) for the exchange rates	52
Chapter 3: Asia crisis: Volatility transfers in stock markets	61
Conclusion	104
References	108

The application of multivariate GARCH models to turbulent financial markets

Table of contents (detailed)

Thanks	V
Deutsche Zusammenfassung der Thesen	VI
Resume des theses en fr a i s a i s	VIII
Summary	I
Introduction:	I
On conditional variance models	2
Macroeconomic considerations	4
Studies on the USD-SF exchange rate	8
Studies on the USD-DM exchange rate	11
Elements of an approach for model comparison	15
Chapter 1: Multivariate GARCH models for the exchange rates and CCC	17
1. Introduction: Multivariate models	17
2. VAR-GARCH and VARMA-GARCH models for 2 series	18
3. The multivariate GARCH model with constant conditional correlations	21
3.1. Short-run exchange rate dynamics	21
3.2. Estimation for the EMS period (1979-1985)	26
3.3. Comparison with the period before the EMS (1973-1979)	29
3.4. Study with new data (1986-1997)	31
3.4.1. A bivariate CCC model for the German mark and the Swiss franc	31
3.4.2. CCC model for 5 exchange rates over 1986-97	32
3.4.3. On theories about exchange rate crises	40
3.4.4. The origins of the crisis in 1992-93 (events 1990-92)	43
3.4.5. Examination for the two subsamples: 1985-1992 and 1992 to 1997	46
Chapter 2: Multivariate GARCH models with time-dependent correlations (dvec) for the exchange rates	52
1. A bivariate GARCH model for the German Mark and the Swiss franc with time-dependent correlations	53
2. Diagonal vec MGARCH model for the 5 exchange rates over 1985-1997	55
3. Diagonal vec MGARCH model from November 1992 to 1997	56
4. Study of 3 subsamples before, during and after the crisis period in 1992-1993	60

Chapter 3: Asia crisis: Volatility transfers in the stock markets	61
1. Introduction to the Asia crisis and to heat waves and meteor showers	61
2. VAR models	64
3. Some characteristics of the data used	65
4. Stationarity of the data	68
4.1. Dickey-Fuller stationarity test	68
4.2. Stationarity tests for 5 series of returns	69
4.3. Cointegration test over May 3, 1994 to April 17, 1998	70
4.4. Granger Causality	71
5. A restricted VAR(1)-GARCH(1,1) for SMI and DJ returns	82
6. VAR(I)-GARCH(1,1) model using the BEKK method	85
6.1. The model	85
6.2. The volatility transfers	86
6.3. Results for bivariate VAR(1)-GARCH(1,1) BEKK models for the SMI and Asia	87
6.4. Results for bivariate VAR(s)-GARCH(p,q) BEKK models for the Dow Jones and Asia	89
6.5. Results for trivariate VAR(s)-GARCH(p,q) models with the BEKK method	91
7. VAR(1)-GARCH(1,1)-in-mean model	94
7.1. A restricted VAR(1)-GARCH(1,1)-in-mean model with BEKK	94
7.2. Estimation of a full VAR(1)-GARCH(1,1)-in mean model with BEKK	95
Conclusion	104
