

Sustainable Automobile Transport

Shaping Climate Change Policy

Lisa Ryan

*School of Geography, Planning and Environmental Policy,
University College Dublin and Comhar - Sustainable
Development Council, Dublin, Ireland*

Hal Turton ,

*Energy Economics Group, Paul Scherrer Institute,
Switzerland and formerly at the International Institute
for Applied Systems Analysis (IIASA), Austria*

With contributions from Frank Convery, Asami Miketa and Leo
Schrattenholzer

ESRI STUDIES SERIES ON THE ENVIRONMENT

Edward Elgar

Cheltenham, UK • Northampton, MA, USA

Contents

<i>List of abbreviations</i>	viii
<i>Foreword</i>	xiii
<i>Acknowledgements</i>	xiv
1 Introduction	1
1.1 Climate change and sustainable development	2
1.2 Recent trends and the current state of global transport energy demand	7
1.3 The role of transport in sustainable development	13
PART I FUTURE TRANSPORT DEMAND AND TECHNOLOGY PROSPECTS	
2 Future drivers and projections of transport demand	23
2.1 A sustainable development scenario to explore future transport	23
2.2 Future passenger transport demand and challenges to sustainable development	29
2.3 Summary	36
3 Transport technology and fuel characteristics and future prospects	38
3.1 Internal combustion engine (ICE) vehicles	39
3.2 Electric vehicles (EVs)	43
3.3 Hybrid electric vehicles	47
3.4 Efficiency prospects	49
3.5 Summary	52
PART II SUSTAINABLE TRANSPORT TECHNOLOGY SCENARIO ANALYSIS	
4 Modelling transport technology and fuel choice in a long-term scenario with ERIS	57
4.1 Modelling transportation technologies	58
4.2 Technology dynamics and costs	62
4.3 Modelling fuel production technologies	66

5	Technology development in a sustainable transport scenario	71
5.1	Future transport energy consumption	72
5.2	Sustainability irprivate automobile passenger transport	76
5.3	Fuel production for sustainable transport	79
5.4	Transport fuel efficiency and greenhouse gas emissions	81
5.5	A sustainable energy system	86
5.6	Summary	89
6	Alternative scenarios of a future transport system	92
6.1	Energy and transport system development in the absence of sustainable development objectives	92
6.2	The impact of climate change policies on passenger transport technology choice	98
PART III POLICY MEASURES FOR SUSTAINABLE TRANSPORT		
7	Policy instruments to reduce GHG from passenger road transport	105
7.1	Policy instruments applied to greenhouse gas mitigation	106
7.2	Policy context for greenhouse gas emissions from transport	112
7.3	Command and control as a policy instrument for passenger cars	115
7.4	Summary	131
8	Demand side: market-based instruments	134
8.1	Emissions trading	135
8.2	Taxes and charges (fiscal measures)	144
8.3	Information measures	172
8.4	Summary	177
9	Voluntary or negotiated agreements	180
9.1	VA design issues in environmental policy	182
9.2	Empirical examples	185
9.3	Summary	201
10	Supply-side policy measures: R&D	203
10.1	Characteristics of technological change	204
10.2	Economic rationale for public R&D	206
10.3	Effectiveness of public R&D as a policy instrument	208
10.4	Modelling R&D in climate change policy	218

10.5	Transport R&D	220
10.6	Summary	222
PART IV ROADMAP TO A SUSTAINABLE TRANSPORT SYSTEM		
11	Future technology developments in transport	227
11.1	Passenger vehicle technology developments	228
11.2	Fuel production for sustainable transport	230
12	Implications for policymaking	235
12.1	Comparing two scenarios	236
12.2	Barriers associated with deployment of advanced passenger car technologies	240
12.3	How can policies resolve this?	242
12.4	Summary	246
13	Sustainable automobile transportation: synthesis of key conclusions	247
13.1	Some conclusions	253
