FOREWORD	<i>Walter Allan</i> 7
PREFACE	<i>Samuel Brittan</i> 9
THE AUTHORS	13
ACKNOWLEDGEMENTS	14
<b>Summary of Main Survey Results</b>	<b>15</b>
<b>ONE:</b>	
<b>Introduction</b>	19
Sources of Disagreement	20
(i) Formal Logic	20
(ii) Empirical Evidence	20
Battleground of empirical testing	21
(iii) Vested Interests	22
(iv) Ethical Judgements	22
<b>TWO:</b>	
<b>Evidence from Earlier Surveys</b>	25
Brittan's Pioneering Survey	25
Kearl's Survey of US Economists	26
Frey's Survey of Four European Countries	26
Block and Walker on Canada	27
<b>THREE:</b>	
<b>Objectives of the IEA Study</b>	28
<b>FOUR:</b>	
<b>The Questionnaire</b>	29
New propositions	30
Order of propositions, and response categories	30

<b>FIVE:</b>	
<b>The Response</b>	32
<b>SIX:</b>	
<b>What Do Economists Disagree About?</b>	41
A. Measures of Disagreement	41
‘Relative entropy’—the measure of disagreement	41
B. Initial Ranking of Survey Propositions	43
Effects of combining response categories	45
C. Comparisons with Other Studies	46
(i) Comparisons of Relative Entropy	46
Possible reasons for differences in results	48
(ii) Comparisons of General Opinion	49
UK economists more in favour of redistributive role for government	50
D. Normative and Positive Propositions	51
Status of some propositions debatable	52
E. Macro vs Micro Propositions	53
<b>SEVEN:</b>	
<b>Vested Interests, Experience and Opinion</b>	55
(i) Employment	58
Differences between business and government economists	60
Comparison with Kearl’s US results	60
(ii) Age	61
Age, experience and attitudes	63
(iii) Sex	65
Strength of women’s opposition to organ transplant trade	65
<b>EIGHT:</b>	
<b>Expertise and Opinion</b>	67
(i) Formal Qualifications	67
Disparity of results	67
(ii) Specialisation and Interest	68
Attitudes to income distribution by specialisation	69
<b>NINE:</b>	
<b>Predictive Statements and Policy Judgements</b>	70
A. Money, Take-overs and Monopoly Power	70
Positive and normative (policy) attitudes related	70

B. Wage-Price Controls	73
(i) Samuelson's Conjecture	74
Attitudes to income distribution and public policy	75
(ii) Friedman's Conjecture	75
Problems of selection and interpretation	76
C. The Money Growth Rule	78
<b>TEN:</b>	
<b>The Influence of Economic Doctrine</b>	79
'Pure' and 'impure' value-judgements	80
A 'map' of high and low correlation propositions	81
An ideology of macro-economics	81
An ideology of micro-economics	83
The role of 'doctrine'	84
<b>ELEVEN:</b>	
<b>Ten-Point Summary</b>	86
<b>APPENDICES:</b>	
1. The Questionnaire: Survey of UK Economists 1989	88
2. Rankings of the 35 Propositions Produced by	
Different 'Disagreement' Measures	92
The calculation of relative entropy	92
Correlations between different	
'disagreement' measures	94
Correlations between 'disagreement' in	
different countries	95
3. Table A1: Policy Judgements and Value Judgements—	
The Case of Wage-Price Controls	96
Table A2: Policy Judgements and Empirical Judgements—	
The Case of Wage-Price Controls	97
Table A3: Policy Judgements and Empirical Judgements—	
The Money Growth Rule	98
Table A4: Policy Judgements and Policy Objectives—	
The Money Growth Rule	99
<b>FIGURES:</b>	
1. Distribution of the sample by sex	34
2. Distribution of the sample by age-group	35
3. Distribution of the sample by type of employment	35
4. Distribution of the sample by area of specialisation	36
5. Age distribution of the sample by sex	37

6. Age distribution of the sample by type of employment	38
7. Distribution of the sample by area of specialisation, classified by sex	39
8. Distribution of the sample by area of specialisation, classified by type of employment	40
9. A summary of responses to the 35 propositions <i>Reverse side: How the economists responded to the 35 propositions</i>	
	<i>Tip-in between p. 44 and p. 45</i>
10. Significant relationships between personal characteristics and responses to the 35 propositions	56-57
11. Responses to selected propositions, classified by employment of respondent	59
12. Responses to selected propositions, classified by age-group of respondent	62
13. Responses to selected propositions, classified by sex of respondent	64
14. Response patterns for proposition 28, classified by responses to proposition 12	71
15. Response patterns for proposition 23, classified by responses to proposition 8	72
16. Response patterns for proposition 24, classified by responses to proposition 4	72
17. Response patterns for proposition 30, cross-classified by responses to propositions 1 and 29	74
18. Response patterns for proposition 31, cross-classified by responses to propositions 11 and 33	77
19. Two-dimensional 'map' of the 35 propositions, produced by monotonic scaling	82

**TABLES:**

1. Characteristics of the sample	33
2. Rankings of propositions by relative entropy	47
3. International comparisons of economic opinion	49
4. The ranks by relative entropy of normative and non-normative propositions	53
