

GENERALIZED METHOD OF MOMENTS ESTIMATION

Editor:

LASZLO MATYAS

Budapest University of Economics

CAMBRIDGE
UNIVERSITY PRESS

Contents

Preface	1
1. Introduction to the Generalized Method of Moments Estimation	3
David Harris and Laszlo Matyas	
1.1. The Method of Moments	4
1.1.1. Moment Conditions	4
1.1.2. Method of Moments Estimation	7
1.2. Generalized Method of Moments (GMM) Estimation	9
1.3. Asymptotic Properties of the GMM Estimator	11
1.3.1. Consistency	12
1.3.2. Asymptotic Normality	17
1.3.3. Asymptotic Efficiency	21
1.3.4. Illustrations	22
1.3.4.1. GMM With i.i.d. Observations	23
1.3.4.2. Regression With Instrumental Variables	24
1.3.5. Choice of Moment Conditions	25
1.4. Conclusion	29
References	29
2. GMM Estimation Techniques	31
Masao Ogaki	
2.1. GMM Estimation	31
2.1.1. GMM Estimator	31
2.1.2. Important Assumptions	34
2.2. Nonlinear Instrumental Variable Estimation	35
2.3. GMM Applications with Stationary Variables	36
2.3.1. Euler Equation Approach	36
2.3.2. Habit Formation	37
2.3.3. Linear Rational Expectations Models	39

2.4. GMM in the Presence of Nonstationary Variables	41
2.4.1. The Cointegration-Euler Equation Approach	42
2.4.2. Structural Error Correction Models	44
2.4.3. An Exchange Rate Model with Sticky Prices	45
2.4.4. The Instrumental Variables Methods	51
2.5. Some Aspects of GMM Estimation	55
2.5.1. Numerical Optimization	55
2.5.2. The Choice of Instrumental Variables	56
2.5.3. Normalization	57
References	59
3. Covariance Matrix Estimation	63
Matthew J. Cushing and Mary G. McGarvey	
3.1. Preliminary Results	63
3.2. The Estimand	64
3.3. Kernel Estimators of V_r	67
3.3.1. Weighted Autocovariance Estimators	68
3.3.2. Weighted Periodogram Estimators	69
3.3.3. Computational Considerations	71
3.3.4. Spectral Interpretation	72
3.3.5. Asymptotic Properties of Scale Parameter Estimators	73
3.4. Optimal Choice of Covariance Estimator	77
3.4.1. Optimal Choice of Scale Parameter Window	77
3.4.2. Optimal Choice of Scale Parameter	78
3.4.3. Other Estimation Strategies	80
3.5. Finite Sample Properties of HAC Estimators	82
3.5.1. Monte Carlo Evidence	82
3.5.2. Regression Model	84
3.5.3. Heteroskedastic but Serially Uncorrelated Errors	86
3.5.4. Autocorrelated but Homoskedastic Errors	88

3.5.5. Autocorrelated and Heteroskedastic Errors	90
3.5.6. Summary	93
References	94
4. Hypothesis Testing in Models Estimated by GMM	96
Alastair R. Hall	
4.1. Identifying and Overidentifying Restrictions	99
4.2. Testing Hypotheses About $E[f(x_t, \beta_0)]$	101
4.3. Testing Hypotheses About Subsets of $E[f(x_t, \beta_0)]$	104
4.4. Testing Hypotheses About the Parameter Vector	108
4.5. Testing Hypotheses About Structural Stability	111
4.6. Testing Non-nested Hypotheses	118
4.7. Conditional Moment and Hausman Tests	122
4.7.1. Conditional Moment Tests	123
4.7.2. Hausman Tests	124
References	125
5. Finite Sample Properties of GMM estimators and Tests	128
Jan M. Podivinsky	
5.1. Related Theoretical Literature	129
5.2. Simulation Evidence	131
5.2.1. Asset Pricing Models	132
5.2.2. Business Cycle Models	134
5.2.3. Stochastic Volatility Models	135
5.2.4. Inventory Models	138
5.2.5. Models of Covariance Structures . . .	139
5.2.6. Other Applications of GMM	140
5.3. Extensions of Standard GMM	141
5.3.1. Estimation	141
5.3.2. Testing	144
5.4. Concluding Comments	145
References	145

6. GMM Estimation of Time Series Models	149
David Harris	
6.1. Estimation of Moving Average Models . . .	150
6.1.1. A Simple Estimator of an MA(1) Model	150
6.1.2. Estimation by Autoregressive Approximation	153
6.1.2.1. The Durbin Estimator	154
6.1.2.2. The Galbraith and Zinde-Walsh Estimator	155
6.1.3. A Finite Order Autoregressive Approximation	155
6.1.4. Higher Order MA Models	156
6.2. Estimation of ARMA Models	157
6.2.1. IV Estimation of AR Coefficients . . .	157
6.2.2. The ARMA(1,1) Model	158
6.2.2.1. A Simple IV Estimator	159
6.2.2.2. Optimal IV Estimation	160
6.3. Applications to Unit Root Testing - - - -	162
6.3.1. Testing for an Autoregressive Unit Root	162
6.3.2. Testing for a Moving Average Unit Root	165
Appendix: Proof of Theorem 6.1	167
References	169
7. Reduced Rank Regression Using GMM	171
Frank Kleibergen	
7.1. GMM-2SLS Estimators in Reduced Rank Models	173
7.1.1. Reduced Rank Regression Models . . .	173
7.1.2. GMM-2SLS Estimators	174
7.1.3. Limiting Distributions for the GMM-2SLS Cointegration Estimators	178
7.2. Testing Cointegration Using GMM 2SLS Estimators	184
7.3. Cointegration in a Model with Heteroskedasticity	187
7.3.1. Generalized Least Squares Cointegration Estimators	187

7.4. Cointegration with Structural Breaks . . .	191
7.5. Conclusion	196
Appendix	197
References	209
8. Estimation of Linear Panel Data Models Using GMM	211
Seung C. Ahn and Peter Schmidt	
8.1. Preliminaries	212
8.1.1. General Model	213
8.1.2. GMM and Instrumental Variables . . .	214
8.1.2.1. Strictly Exogenous Instruments and Random effects	217
8.1.2.2. Strictly Exogenous Instruments and Fixed Effects	217
8.2. Models with Weakly Exogenous Instruments	218
8.2.1. The Forward Filter Estimator - - - -	219
8.2.2. Irrelevance of Forward Filtering . . .	220
8.2.3. Semiparametric Efficiency Bound . . .	221
8.3. Models with Strictly Exogenous Regressors	222
8.3.1. The Hausman and Taylor, Amemiya and MaCurdy and Breusch, Mizon and Schmidt Estimators	223
8.3.2. Efficient GMM Estimation	226
8.3.3. GMM with Unrestricted E	229
8.4. Simultaneous Equations	230
8.4.1. Estimation of a Single Equation . . .	231
8.4.2. System of Equations Estimation . . .	234
8.5. Dynamic Panel Data Models	235
8.5.1. Moment Conditions Under Standard Assumptions	236
8.5.2. Some Alternative Assumptions - - - -	238
8.5.3. Estimation	241
8.5.3.1. Notation and General Results . . .	241
8.5.3.2. Linear Moment Conditions and Instrumental Variables	243
8.5.3.3. Linearized GMM	244
8.6. Conclusion	245

References	246
9. Alternative GMM Methods for Nonlinear Panel Data Models	248
Jorg Breitung and Michael Lechner	
9.1. A Class of Nonlinear Panel Data Models	250
9.2. GMM Estimators for the Conditional Mean	253
9.3. Higher Order Moment Conditions - - - -	255
9.4. Selecting Moment Conditions: The Gallant-Tauchen Approach	256
9.5. A Minimum Distance Approach	258
9.6. Finite Sample Properties	259
9.6.1. Data Generating Process	259
9.6.2. Estimators	260
9.7. Results	263
9.8. An Application	265
9.9. Concluding Remarks	267
References	273
10. Simulation Based Method of Moments	275
Roman Liesenfeld and Jorg Breitung	
10.1. General Setup and Applications	277
10.2. The Method of Simulated Moments (MSM)	281
10.3. Indirect Inference Estimator	286
10.4. The SNP Approach	290
10.5. Some Practical Issues	292
10.5.1. Drawing Random Numbers and Variance Reduction	292
10.5.2. The Selection of the Auxiliary Model	294
10.5.3. Small Sample Properties of the Indirect Inference	295
10.6. Conclusion	296
References	297
11. Logically Inconsistent Limited Dependent Variables Models	301
J. S. Butler and Gabriel Picone	
11.1. Logical Inconsistency	302
