

# **Computability, Complexity and Constructivity in Economic Analysis**

**Edited by**

**K. Vela Velupillai**

**Blackwell  
Publishing**

## CONTENTS

Preface	vii
I Introduction <i>K. Vela Velupillai</i>	1
II Computing the Future <i>N. C. A. da Costa and F. A. Doria</i>	15
III Making Mathematics Effective in Economics <i>Joseph L. McCauley</i>	51
IV Complexity and Information in Modeling <i>J. Rissanen</i>	85
V Induction: Algorithmic and Exchangeable Aspects <i>John J. McCall</i>	105
VI Constructive and Classical Models for Results in Economics and Game Theory <i>Kislaya Prasad</i>	132
VII A Primer on the Tools and Concepts of Computable Economics <i>K. Vela Velupillai</i>	148
VIII Emergence and Universal Computation <i>Cassey Lee</i>	198
IX Research and Development in Computable Production Functions <i>Francesco Luna</i>	218
X Computable Knowledge and Undecidability: a Turing Machine Metaphor Applied to Endogenous Growth Models <i>Stefano Zambelli</i>	233
XI Rights and Decentralized Computation <i>Håkan J. Holm</i>	264
Author Index	288
Subject Index	295
