

CONTENTS OF VOLUME 1

Introduction to the Series	v
Contents of the Handbook	vii
Preface to the Handbook	ix

Introduction	
KOTARO SUZUMURA	1
1. Historical background	1
2. Social choice and individual values	10
3. “Socialist planning” controversy	13
4. Significance of the subject and main lines of research	18
5. A disclaimer	25
References	26

Part 1 – ARROVIAN IMPOSSIBILITY THEOREMS

Chapter 1

Impossibility Theorems in the Arrovian Framework	
DONALD E. CAMPBELL and JERRY S. KELLY	35
Abstract	36
Keywords	36
1. Introduction	37
2. Definitions and framework	39
3. Fundamental lemmas and Arrow’s theorem	43
4. Relaxing the Pareto criterion	52
5. Relaxing transitivity	57
6. Relaxing the domain condition	64
7. Relaxing independence of irrelevant alternatives	70
8. Modifications of the Arrovian framework	75
9. Concluding remarks	84
References	85

Chapter 2

Categories of Arrovian Voting Schemes

FUAD ALESKEROV	95
Abstract	97
Keywords	97
1. Introduction	98
2. Voting: a general description	99
3. Rationality of individual opinions and collective decisions	100
3.1. Binary relations and choice functions	100
3.2. Expansion–contraction axioms	101
4. Social decision rules	103
4.1. Locality	103
4.2. Normative conditions	104
4.3. Rules from the Central Class	105
4.4. Rationality constraints and rules from the Central Class	108
4.5. Remarks and guide to the literature	109
5. Functional voting rules	112
5.1. Locality	112
5.2. Normative conditions	113
5.3. Rules from the Central Class	113
5.4. Rationality constraints and rules from the Central Class	114
5.5. Remarks and guide to the literature	115
6. Social choice correspondences	116
6.1. Locality	116
6.2. Normative conditions	117
6.3. Rules from the Central Class	118
6.4. Rules from the Symmetrically Central Class	120
6.5. Rationality constraints and rules from the Central Class	122
6.6. Remarks and guide to the literature	123
7. Conclusion	125
References	126

Chapter 3

Domain Restrictions

WULF GAERTNER	131
Abstract	132
Keywords	132
1. Introduction	133
2. Notation and definitions	135
3. The existence of collective choice rules under exclusion conditions for finite sets of discrete alternatives	136
3.1. Basic concepts	136

3.2. The case where the individual preferences are orderings – The method of majority decision is a social welfare function or a social decision function	137
3.3. The case where the individual preferences are quasi-transitive – The method of majority decision is a social welfare function or a social decision function of type QT for quasi-transitive individual preferences	139
3.4. Alternative single-stage social decision rules and multi-stage majority decision rules	141
3.5. The probability of no Condorcet winner	143
3.6. Coalition formation and simple games	144
4. The existence of Arrovian social welfare functions and the domain of the simple majority rule	146
4.1. Domains for Arrow-type social welfare functions	146
4.2. The domain for the simple majority rule	152
5. Distributional restrictions over the set of individual preferences under simple majority rule	153
5.1. Conditions on the distribution of preferences in the original profile	153
5.2. Conditions on the distribution of preferences in the reduced profile	156
6. Social choice in continuous space	160
6.1. Impossibilities	160
6.2. Contractibility and existence results	162
6.3. Discrete vs. continuous choices	165
7. Concluding remarks	166
References	167

Part 2 – VOTING SCHEMES AND MECHANISMS

Chapter 4

Voting Procedures

STEVEN J. BRAMS and PETER C. FISHBURN

Abstract	175
Keywords	175
1. Introduction	176
2. Voter preferences and social choice functions	180
3. Voting procedures for two candidates	183
4. Introduction to voting procedures for three or more candidates	186
5. Nonranked voting and dominated strategies	189
5.1. Examples	189
5.2. Voter preferences	190
5.3. Dominance between strategies	191
6. Strategic analysis of nonranked voting	193
6.1. Admissible strategies	193
6.2. Sincere voting and strategyproofness	195
6.3. Efficacy	197
6.4. Plurality ballots and the median outcome	198

7. Nonranked multistage voting: successive elimination	198
7.1. Examples	198
7.2. Binary multistage voting	199
7.3. Paradoxes	201
8. Condorcet choices and ranked voting	203
8.1. Condorcet combinatorics	203
8.2. Nonranked voting and Condorcet candidates	206
8.3. Condorcet voting procedures	210
9. Positional scoring procedures and Borda choices	212
9.1. Positional scoring procedures	212
9.2. Axioms	213
9.3. Paradoxes	214
9.4. In praise of Borda, mostly	216
10. Point distribution procedures	218
11. Proportional representation	219
11.1. The Hare system of single transferable vote	220
11.2. Additional-member systems	223
11.3. Minimizing representational imbalance	225
12. Conclusions	225
References	227

Chapter 5

Implementation Theory	
ERIC MASKIN and TOMAS SJÖSTRÖM	237
Abstract	238
Keywords	238
1. Introduction	239
2. Definitions	245
3. Nash implementation	247
3.1. Definitions	248
3.2. Monotonicity and no veto power	248
3.3. Necessary and sufficient conditions	250
3.4. Weak implementation	254
3.5. Strategy-proofness and rich domains of preferences	254
3.6. Unrestricted domain of strict preferences	256
3.7. Economic environments	257
3.8. Two agent implementation	259
4. Implementation with complete information: further topics	260
4.1. Refinements of Nash equilibrium	260
4.2. Virtual implementation	264
4.3. Mixed strategies	265
4.4. Extensive form mechanisms	267
4.5. Renegotiation	269

4.6. The planner as a player	275
5. Bayesian implementation	276
5.1. Definitions	276
5.2. Closure	277
5.3. Incentive compatibility	278
5.4. Bayesian monotonicity	279
5.5. Non-parametric, robust and fault tolerant implementation	281
6. Concluding remarks	281
References	282

Chapter 6

Axiomatic Cost and Surplus Sharing

HERVÉ MOULIN

289

Abstract

290

Keywords

290

Introduction

291

1. Rationing

294

1.1. The problem and some examples

294

1.2. The proportional method

297

1.3. Uniform Gains and Uniform Losses

298

1.4. The Contested-Garment method and Self-Duality

301

1.5. Consistent and symmetric methods

304

1.6. Equal-sacrifice methods

307

1.7. Asymmetric methods: combining the invariance axioms

309

1.8. Fixed-path methods

312

1.9. Rationing indivisible goods

313

1.10. Two variants of the rationing model.

315

2. Sharing variable returns

316

2.1. The problem and some examples

316

2.2. Average-cost method

318

2.3. Serial cost sharing

319

2.4. Additive cost sharing

322

2.5. Variants of the model and further axioms

326

3. Heterogeneous outputs or inputs

328

3.1. The problem

328

3.2. Binary demands: the Shapley value

330

3.3. Variable demands of indivisible goods: the dr model

335

3.4. Demand Monotonicity in the dr model

339

3.5. Variable demands of divisible goods: the rr model

341

3.6. Unit Invariance and Demand Monotonicity in the rr model

346

3.7. Non-additive cost sharing methods

349

Part 3 – STRUCTURE OF SOCIAL CHOICE RULES

Chapter 7

Positional Rules of Collective Decision-Making

PRASANTA K. PATTANAIK	361
Abstract	362
Keywords	362
1. Introduction	363
2. The basic notation and definitions	364
3. Some notions of positionalist social ranking rules and social decision rules	367
3.1. The definition of positionality	367
3.2. Some positionalist rules	371
4. Arrow's conditions, the principle of simple majority, and positionalist SDRs	375
4.1. Arrow's conditions and positionalist rules	375
4.2. The simple majority rule and positionalist SDRs	378
5. The structure of the Borda rule	380
5.1. Axiomatic characterizations of the Borda rule	380
5.2. A Bayesian justification for the BDR (I)	384
5.3. A Paretian argument for the BDR (I)	385
5.4. A general comparison of the Borda procedure and other positionalist voting rules	386
6. Score-based rules, dominance-based scoring rules, and runoff procedures	386
6.1. Score-based ranking and decision rules	386
6.2. Score-based ranking rules and the principle of dominance	388
6.3. Runoff systems	390
7. Concluding remarks	392
References	393

Chapter 8

Game-Theoretic Analysis of Voting in Committees

BEZALEL PELEG	395
Abstract	396
Keywords	396
Introduction	397
1. Plurality voting, Borda count, and feasible elimination procedures: some examples	398
1.1. The voting paradox	398
1.2. The failure of plurality voting in the presence of manipulation of preferences by coalitions	399
1.3. The failure of the Borda count	399
1.4. Feasible elimination procedures	400
2. Basic concepts	401
2.1. Committees	401
2.2. Choice problems	403

2.3. Voting procedures	404
3. Representations of committees	407
3.1. The simple games associated with an SCC	407
3.2. Cores of simple games	409
3.3. Representations of committees by SCCs	410
3.4. Representations of committees by SCFs	411
4. Undistorted and consistent SCFs	412
4.1. Voting games and Nash equilibria	412
4.2. Exactly and strongly consistent SCFs	414
5. Strong representations of committees	415
5.1. Strong representations and effectivity functions	415
5.2. Strong representations of weak and symmetric games	417
5.3. The capacity of a committee	418
6. Continuation and generalizations	419
7. Concluding remarks	421
References	422

Chapter 9

Representative Democracy as Social Choice

NORMAN SCHOFIELD

425

Abstract

426

Keywords

426

1. Introduction: Constitutional choices

427

2. Voters as a “committee”

432

3. A “committee” of politicians

436

4. Elections as methods of belief aggregation

443

5. Electoral risk-taking and economic or political quandaries

448

6. Concluding remarks

452

References

452

Part 4 – WELFARE, JUSTICE AND POVERTY

Chapter 10

Social Welfare Functionals and Interpersonal Comparability

CLAUDE d’ASPREMONT and LOUIS GEVERS

459

Abstract

461

Keywords

461

1. Introduction

462

2. Social welfare functionals and related concepts

465

2.1. Definitions

465

2.2. Examples

468

2.3. Domain interpretation

474

2.4. Some related concepts

476

3. Axioms and their use	477
3.1. Preliminary	477
3.2. Invariance axioms	478
3.3. Other information-filtering axioms and formal welfarism	489
3.4. Pareto dominance principles and weak welfarism	499
3.5. Equity axioms	503
4. Independence and invariance-based characterisations	507
4.1. Restricting interpersonal level comparability	507
4.2. Full comparability: from cardinal to ordinal measurability	513
4.3. Homothetic vs. translatable social welfare functionals	519
5. Discarding neutrality or invariance	520
5.1. Uncertainty and risk: from Harsanyi to Relative Utilitarianism	521
5.2. On some egalitarian social rankings	531
6. Conclusion	534
References	537

Chapter 11

Utilitarianism and the Theory of Justice

CHARLES BLACKORBY, WALTER BOSSERT and DAVID DONALDSON	543
Abstract	544
Keywords	544
1. Introduction	545
2. Social-evaluation functionals	549
3. Welfarism	553
4. Generalized utilitarianism	560
5. Utilitarianism	566
6. Variable-population extensions	571
7. Uncertainty	581
8. Conclusion	590
References	591

Chapter 12

Inequality, Poverty and Welfare

BHASKAR DUTTA	597
Abstract	598
Keywords	598
1. Introduction	599
2. Preliminaries	600
3. Measurement of inequality	601
3.1. The Atkinson–Kolm–Sen approach	601
3.2. Dominance and inequality	607
3.3. Characterization theorems	612
3.4. Measuring mobility	616

4. Measurement of poverty	619
5. Concluding remarks	627
References	628
