1 Complexity, self-organization, and political economy

Introduction 1

What is a complex system? 1

The Classical political economic vision 3

Self-organization and equilibrium 11

From Malthus to Darwin to Kauffman 17

Classical themes 20

Humanity's struggle to control its fate 31

2 Innovative capitalism and the distribution of income

The puzzle of distribution 35

The Goodwin model 38

The puzzle of productivity change 40

Innovation, distribution, and the profit rate 42

The Goodwin-Kennedy model: induced technical change 43

Foundations of induced technical change theory 46

The labor theory of value 49

A way out of the capital theory dilemma? 51

Self-organization in economic history 53

3 Can political economy save us from global warming?

The welfare economics of global warming 56

viii *Contents*

Dynamic and static substitution 61

Accumulation with a land constraint 62

Closed and open loops 69

Paths to sustainability 69

Economic policy and self-organizing complexity 74

4 The new economy and the population of the Earth 75

Smith and Malthus 76

Stable and unstable demographic equilibria 78

Evidence 81

Population, innovation, and sustainability 84

Distribution 85

Challenges and pitfalls 86

Methods and conclusions 88

5 Concluding observations 89

Bibliography 92
