TACKLING COMPLEXITY

A SYSTEMIC APPROACH FOR DECISION MAKERS

GILBERT PROBST AND ANDREA M. BASSI

PUBLISHING
Contents

Foreword ix
   Paul Polman

Foreword xii
   Klaus Schwab

Preface xiv

1. Introduction 1
   1.1 Purpose of and rationale for dealing with complexity 1
   1.2 Audience and user guidance 7

2. Case study: why a systemic approach matters 10

3. Phase 1: Problem identification 21
   3.1 Conceptual mistake #1: Abundance of data allows us to find ultimate solutions and predict system behaviour 22
   3.2 What to do: Delimit the problem, identify the causes and the effects 28
3.2.1 Step 1: Define the boundaries of the problem 29
3.2.2 Step 2: Identify the causes and effects 32
3.2.3 Step 3: Analyse future behavioural paths and impacts 35

Case study 1 Problem identification with systems thinking: the creation of the Ethiopia Commodity Exchange 39

4. Phase 2: System characterisation 4i

4.1 Conceptual mistake #2a: Every problem is a direct consequence of a single cause 42
4.2 Conceptual mistake #2b: We only need an accurate 'snapshot' of the actual state of the system to find solutions 43
4.3 What to do: Map the complexity and explore the dynamic properties of the system 45

4.3.1 Step 1: Build a causal diagram and review the boundaries of the system 47
4.3.2 Step 2: Create a shared understanding of the functioning of the system 52
4.3.3 Step 3: Identify key feedback loops and entry points for action 55

Case study 2 Representing and analysing dynamic complexity to design effective policies: fossil fuel subsidy reform 62

5. Phase 3: Strategy/Policy assessment 64

5.1 Conceptual mistake #3: The problem will be solved with the implementation of the intervention selected 65
5.2 What to do: Identify the learning capabilities of the system 67

5.2.1 Step 1: Design potential interventions 68
5.2.2 Step 2: Assess interventions (anticipate gaps, time frames and early warning signals) 72
5.2.3 Step 3: Select viable intervention options and indicators

Case study 3 Reducing risks and maximising profits with systemic strategy assessment: Nestle

6. Phase 4: Decision making and implementation

6.1 Conceptual mistake #4: With a problem-oriented optimisation, the solution will maximise benefits for all

6.2 What to do: Evaluate the proposed solution using different perspectives, and assess the impacts across sectors and actors

6.2.1 Step 1: Use a multi-stakeholder approach

6.2.2 Step 2: Analyse the expected impacts across sectors and actors

6.2.3 Step 3: Define the strategy and action plan

Case study 4 Multi-stakeholder decision making in relief operations: the Agility CSR programme

7. Phase 5: Monitoring and evaluation

7.1 Conceptual mistake #5: Monitoring and evaluation do not affect the decision-making cycle, they only evaluate the system performance

7.2 What to do: Assess the effectiveness of the implemented interventions and the system responses to redefine the top priorities and the need for further action

7.2.1 Step 1: Implement the strategy and monitor the development of the system

7.2.2 Step 2: Analyse the impacts across sectors and actors

7.2.3 Step 3: Use lessons learned for the next decision-making process

Case study 5 Monitoring managers' commitment: Deutsche Bank
8. Conclusions 122

Annex: Overview of key tools 125
   A1 Indicators 127
   A2 Influence tables 142
   A3 Causal loop diagrams 147
   A4 Scenarios 155
   A5 Simulation 164
