CONTENTS

Preface xv

CHAPTER 1 Introduction to Economic Models 1

Economic Models	2
<i>Variables and Equations</i>	2
<i>Characteristics of Equilibrium</i>	3
Static Model of a Competitive Market	3
<i>Linear Model</i>	6
<i>Static Stability of Equilibrium</i>	11
<i>Price Ceilings and Price Floors</i>	12

CHAPTER 2 A Review of Some Basic Mathematics 21

Sets	21
<i>Set Notation</i>	22
<i>Functions</i>	23
The Derivative	24
<i>Basic Rules for Derivatives of Functions with One Independent Variable</i>	26
<i>The Chain Rule</i>	28
Limits and Derivatives	29
Differentials and Derivatives	32
Integration	37
<i>Notation and Terminology</i>	37
<i>Definite Integrals</i>	39
<i>Measuring the Area Under a Curve</i>	41

PART I ANALYSIS OF MARKETS 48

CHAPTER 3 Perfectly Competitive Markets: Static Analysis 48

<i>Walrasian Stability Revisited</i>	48
Marshallian System	50
<i>Inverse Functions</i>	53
<i>Departures from the Usual Case</i>	54
<i>Multiple Equilibria</i>	59
<i>Additional Features of Market Equilibrium</i>	62
<i>Measuring Consumers' Surplus and Producers' Surplus</i>	64
Comparative Statics	67
<i>Comparative Static Analysis in a Competitive Market</i>	68

CHAPTER 4	Perfectly Competitive Markets: Dynamic Analysis	77
	First-Order Difference Equations	78
	<i>Solution to a Linear, First-Order Difference Equation</i>	78
	<i>Dynamic Stability</i>	80
	Cobweb Model	83
	Inventory Model	89
	Exponential and Logarithmic Functions	94
	<i>Compound Interest</i>	96
	<i>Derivatives of Natural Exponential and Natural Logarithmic Functions</i>	99
	First-Order Differential Equations	101
	<i>Solution to a Constant Coefficient-Constant Term, Linear First-Order Differential Equation</i>	102
	<i>Dynamic Stability</i>	103
	Application to a Perfectly Competitive Market	106
CHAPTER 5	Systems of Linear Equations and General Equilibrium	113
	A Model of Two Perfectly Competitive Markets	113
	General Competitive Equilibrium	117
	A Review of Vectors	117
	<i>Operations with Vectors</i>	118
	<i>Linear Dependence and Independence of Vectors</i>	123
	An Introduction to Matrix Algebra	125
	<i>Operations with Matrices</i>	127
	<i>The Determinant of a Matrix</i>	132
	<i>The Inverse of a Matrix</i>	135
	Solving a System of Linear Equations	137
	<i>Cramer's Rule</i>	143
	<i>General Competitive Equilibrium in Matrix Notation</i>	146
	<i>Example of a General Equilibrium: Three Related, Competitive Markets</i>	147
PART II	OPTIMIZATION	152
CHAPTER 6	Theory of the Firm: Short-Run Decision Rules	152
	<i>Unconstrained Optimization for Functions with One Independent Variable</i>	153
	<i>Relative Extrema</i>	156
	Short-Run Product and Cost Curves	165
	<i>Labor Productivity</i>	165
	<i>Short-Run Costs</i>	168
	<i>Short-Run Cost Functions</i>	172
	Short-Run Decision Rules for a Firm	177
	<i>Selection of the Profit-Maximizing Output</i>	177
	<i>Selection of the Profit-Maximizing Level of Employment</i>	180
	<i>Practical Considerations</i>	184
	<i>Implicit Functions</i>	185

CHAPTER 7 Competition Among Many: Perfectly Competitive Firms and Monopolistically Competitive Firms 193

Perfectly Competitive Firms	194
<i>Product Market</i>	194
<i>Labor Market</i>	203
<i>Comparative Statics for a Perfectly Competitive Firm</i>	209
Monopolistically Competitive Firms	212
<i>Price Elasticity of Demand</i>	215
<i>Profit Maximization for a Monopolistically Competitive Firm</i>	218

CHAPTER 8 Monopolies and Monopsonies 229

Unconstrained Optimization for Multivariate Functions	229
<i>Relative Extrema</i>	230
<i>Unconstrained Optimization for Functions of n Independent Variables</i>	238
<i>Concavity and Convexity of an Objective Function</i>	239
<i>Jacobians and Functional Independence</i>	242
Profit Maximization for a Firm With Two Plants	245
Monopolies	252
<i>The Allocative Inefficiency of a Monopoly</i>	253
Monopsonies	265
<i>Monopsony in the Labor Market</i>	265
<i>Monopsonist's Profit-Maximizing Employment and Wage</i>	268

CHAPTER 9 Duopolies and Oligopolies 278

Duopolies	279
<i>Cournot Case</i>	279
<i>Edgeworth Case</i>	284
<i>Chamberlin Case</i>	286
<i>The Duopoly Mineral Springs Example Revisited: General Cases</i>	288
Oligopolies	296
<i>A Model of Output and Price Selection for an Oligopolist</i>	297
<i>The Kinked Demand Curve and Price Rigidity</i>	302
Using Simple Game Theory	309
<i>Price Competition</i>	310
<i>Advertising</i>	317

CHAPTER 10 Theory of the Firm: Constrained Optimization 327

Optimization Under Constraints: An Example	327
<i>Using the Lagrange Multiplier Method</i>	330
Lagrange Multiplier Method	332
<i>Implicit Functions in Simultaneous Equations Systems</i>	333
<i>Interpretation of the Lagrange Multiplier</i>	334
<i>Second-Order Conditions</i>	336
<i>Extension of Lagrange Multiplier Method to n Choice Variables</i>	339
<i>Extension of Lagrange Multiplier Method to m Constraints</i>	341
Production Functions	342
<i>Isoquants</i>	345

Cost Minimization	348	
<i>Comparative Statics on the Least-Cost Equilibrium of the Firm</i>		354
CHAPTER 11 Theory of the Firm: Inequality Constraints		365
Linear Programming	366	
<i>The Simplex Method</i>	370	
Duality	378	
<i>Two Duality Theorems</i>	384	
An Introduction to Nonlinear Programming		388
<i>The Nonlinear Programming Problem</i>	388	
Cost Minimization	398	
CHAPTER 12 Theory of Consumer Behavior		412
Utility Maximization	412	
<i>Indifference Curves</i>	413	
<i>The Budget Constraint</i>	418	
Consumer Equilibrium	420	
Utility Maximization Using the Lagrangian Method		420
<i>Comparative Statics on Consumer Equilibrium</i>	424	
<i>The Labor-Leisure Tradeoff</i>	429	
Nonlinear Programming and Utility Maximization		434
<i>Utility Maximization with Two Constraints</i>	437	
PART III MACROECONOMIC ANALYSIS		451
CHAPTER 13 Basic Macroeconomic Models: Input-Output Analysis and a Simple Keynesian Model		451
Input-Output Analysis	452	
<i>The Input-Output Table</i>	452	
<i>Comparative Statics</i>	461	
A Simple Keynesian Model	463	
<i>Equilibrium in the Simple Keynesian Model</i>	466	
<i>Stability in the Simple Keynesian Model</i>	470	
<i>Comparative Statics</i>	471	
<i>A Two-Country Simple Keynesian Model</i>	476	
CHAPTER 14 IS-LM and Aggregate Demand-Aggregate Supply Models		489
An IS-LM Model	489	
<i>The Product Market</i>	490	
<i>The Money Market</i>	494	
<i>General Equilibrium in the IS-LM Model</i>	498	
<i>Comparative Statics: Demand-Management Policy</i>		502
An Aggregate Demand-Aggregate Supply Model		511
<i>Aggregate Demand</i>	511	
<i>Aggregate Supply</i>	514	
<i>General Equilibrium in the Y^D-Y^S Model</i>	517	
<i>Comparative Statics: Aggregate Supply Constraints</i>		518

CHAPTER 15 Growth Rates and Growth Models	532
<i>Rates of Growth</i>	532
Economic Growth	534
<i>Sources of Output Growth</i>	535
<i>Investment and Physical Capital Formation</i>	538
<i>Population Growth</i>	541
Harrod-Domar Growth Model	546
<i>Steady-State Equilibrium</i>	548
<i>The Knife-Edge Problem</i>	550
<i>A Variable Saving Rate</i>	555
Solow Growth Model	558
<i>Fundamental Equation of the Solow Growth Model</i>	560
Sustained Economic Growth	569
<i>Effective Labor</i>	569
<i>Effective Capital</i>	574
<i>Neutral Technological Change</i>	575
Glossary	583
Index	595
