Preface	xiii
Acknowledgements	xv
About the Companion Website	xvii
Nomenclature	xix
Introduction	1
1 Introduction to Modular Multilevel Converters	7
1.1 Introduction	7
1.2 The Two-Level Voltage Source Converter	9
1.2.1 Topology and Basic Function	9
1.2.2 Steady-State Operation	12
1.3 Benefits of Multilevel Converters	15
1.4 Early Multilevel Converters	17
1.4.1 Diode Clamped Converters	17
1.4.2 Flying Capacitor Converters	20
1.5 Cascaded Multilevel Converters	23
1.5.1 Submodules and Submodule Strings	23
1.5.2 Modular Multilevel Converter with Half-Bridge Submodules	28
1.5.3 Other Cascaded Converter Topologies	43
1.6 Summary	57
References	58
2 Main-Circuit Design	60
2.1 Introduction	60
2.2 Properties and Design Choices of Power Semiconductor Devices for High-Power Applications	61
2.2.1 Historical Overview of the Development Toward Modern Power Semiconductors	61
2.2.2 Basic Conduction Properties of Power Semiconductor Devices	64
2.2.3 P–N Junctions for Blocking	65
2.2.4 Conduction Properties and the Need for Carrier Injection	67
2.2.5 Switching Properties	72
2.2.6 Packaging	73

2.2.7	<i>Reliability of Power Semiconductor Devices</i>	80
2.2.8	<i>Silicon Carbide Power Devices</i>	84
2.3	Medium-Voltage Capacitors for Submodules	92
2.3.1	<i>Design and Fabrication</i>	93
2.3.2	<i>Self-Healing and Reliability</i>	95
2.4	Arm Inductors	96
2.5	Submodule Configurations	98
2.5.1	<i>Existing Half-Bridge Submodule Realizations</i>	99
2.5.2	<i>Clamped Single-Submodule</i>	104
2.5.3	<i>Clamped Double-Submodule</i>	105
2.5.4	<i>Unipolar-Voltage Full-Bridge Submodule</i>	106
2.5.5	<i>Five-Level Cross-Connected Submodule</i>	107
2.5.6	<i>Three-Level Cross-Connected Submodule</i>	107
2.5.7	<i>Double Submodule</i>	108
2.5.8	<i>Semi-Full-Bridge Submodule</i>	109
2.5.9	<i>Soft-Switching Submodules</i>	110
2.6	Choice of Main-Circuit Parameters	112
2.6.1	<i>Main Input Data</i>	112
2.6.2	<i>Choice of Power Semiconductor Devices</i>	114
2.6.3	<i>Choice of the Number of Submodules</i>	115
2.6.4	<i>Choice of Submodule Capacitance</i>	117
2.6.5	<i>Choice of Arm Inductance</i>	117
2.7	Handling of Redundant and Faulty Submodules	118
2.7.1	<i>Method 1</i>	118
2.7.2	<i>Method 2</i>	119
2.7.3	<i>Comparison of Method 1 and Method 2</i>	120
2.7.4	<i>Handling of Redundancy Using IGBT Stacks</i>	121
2.8	Auxiliary Power Supplies for Submodules	121
2.8.1	<i>Using the Submodule Capacitor as Power Source</i>	121
2.8.2	<i>Power Supplies with High-Voltage Inputs</i>	123
2.8.3	<i>The Tapped-Inductor Buck Converter</i>	125
2.9	Start-Up Procedures	126
2.10	Summary	126
	References	127
3	Dynamics and Control	133
3.1	Introduction	133
3.2	Fundamentals	134
3.2.1	<i>Arms</i>	135
3.2.2	<i>Submodules</i>	135
3.2.3	<i>AC Bus</i>	136
3.2.4	<i>DC Bus</i>	136
3.2.5	<i>Currents</i>	136
3.3	Converter Operating Principle and Averaged Dynamic Model	137
3.3.1	<i>Dynamic Relations for the Currents</i>	137
3.3.2	<i>Selection of the Mean Sum Capacitor Voltages</i>	137
3.3.3	<i>Averaging Principle</i>	138

3.3.4	<i>Ideal Selection of the Insertion Indices</i>	140
3.3.5	<i>Sum-Capacitor-Voltage Ripples</i>	141
3.3.6	<i>Maximum Output Voltage</i>	144
3.3.7	<i>DC-Bus Dynamics</i>	146
3.3.8	<i>Time Delays</i>	148
3.4	Per-Phase Output-Current Control	148
3.4.1	<i>Tracking of a Sinusoidal Reference Using a PI Controller</i>	149
3.4.2	<i>Resonant Filters and Generalized Integrators</i>	150
3.4.3	<i>Tracking of a Sinusoidal Reference Using a PR Controller</i>	152
3.4.4	<i>Parameter Selection for a PR Current Controller</i>	153
3.4.5	<i>Output-Current Controller Design</i>	157
3.5	Arm-Balancing (Internal) Control	161
3.5.1	<i>Circulating-Current Control</i>	163
3.5.2	<i>Direct Voltage Control</i>	163
3.5.3	<i>Closed-Loop Voltage Control</i>	166
3.5.4	<i>Open-Loop Voltage Control</i>	168
3.5.5	<i>Hybrid Voltage Control</i>	172
3.6	Three-Phase Systems	175
3.6.1	<i>Balanced Three-Phase Systems</i>	175
3.6.2	<i>Imbalanced Three-Phase Systems</i>	175
3.6.3	<i>Instantaneous Active Power</i>	176
3.6.4	<i>Wye (Y) and Delta (Δ) Connections</i>	177
3.6.5	<i>Harmonics</i>	177
3.6.6	<i>Space Vectors</i>	178
3.6.7	<i>Instantaneous Power</i>	182
3.6.8	<i>Selection of the Space-Vector Scaling Constant</i>	184
3.7	Vector Output-Current Control	184
3.7.1	<i>PR (PI) Controller</i>	186
3.7.2	<i>Reference-Vector Saturation</i>	188
3.7.3	<i>Transformations</i>	188
3.7.4	<i>Zero-Sequence Injection</i>	190
3.8	Higher-Level Control	192
3.8.1	<i>Phase-Locked Loop</i>	193
3.8.2	<i>Open-Loop Active- and Reactive-Power Control</i>	197
3.8.3	<i>DC-Bus-Voltage Control</i>	198
3.8.4	<i>Power-Synchronization Control</i>	200
3.9	Control Architectures	207
3.9.1	<i>Communication Network</i>	209
3.9.2	<i>Fault-Tolerant Communication Networks</i>	211
3.10	Summary	212
	References	212
4	Control under Unbalanced Grid Conditions	214
4.1	Introduction	214
4.2	Grid Requirements	214
4.3	Shortcomings of Conventional Vector Control	215
4.3.1	<i>PLL with Notch Filter</i>	216

4.4	Positive/Negative-Sequence Extraction	219
4.4.1	<i>DDSRF-PNSE</i>	219
4.4.2	<i>DSOGI-PNSE</i>	221
4.5	Injection Reference Strategy	223
4.5.1	<i>PSI with PSI-LVRT Compliance</i>	225
4.5.2	<i>MSI-LVRT Mixed Positive- and Negative-Sequence Injection with both PSI-LVRT and NSI-LVRT Compliance</i>	226
4.6	Component-Based Vector Output-Current Control	226
4.6.1	<i>DDSRF-PNSE-Based Control</i>	226
4.6.2	<i>DSOGI-PNSE-Based Control</i>	227
4.7	Summary	228
	References	231
5	Modulation and Submodule Energy Balancing	232
5.1	Introduction	232
5.2	Fundamentals of Pulse-Width Modulation	233
5.2.1	<i>Basic Concepts</i>	233
5.2.2	<i>Performance of Modulation Methods</i>	234
5.2.3	<i>Reference Third-Harmonic Injection in Three-Phase Systems</i>	235
5.3	Carrier-Based Modulation Methods	236
5.3.1	<i>Two-Level Carrier-Based Modulation</i>	236
5.3.2	<i>Analysis by Fourier Series Expansion</i>	237
5.3.3	<i>Polyphase Systems</i>	242
5.4	Multilevel Carrier-Based Modulation	243
5.4.1	<i>Phase-Shifted Carriers</i>	243
5.4.2	<i>Level-Shifted Carriers</i>	250
5.5	Nearest-Level Control	252
5.6	Submodule Energy Balancing Methods	256
5.6.1	<i>Submodule Sorting</i>	256
5.6.2	<i>Predictive Sorting</i>	259
5.6.3	<i>Tolerance Band Methods</i>	263
5.6.4	<i>Individual Submodule-Capacitor-Voltage Control</i>	269
5.7	Summary	270
	References	271
6	Modeling and Simulation	272
6.1	Introduction	272
6.2	Leg-Level Averaged (LLA) Model	274
6.3	Arm-Level Averaged (ALA) Model	275
6.3.1	<i>Arm-Level Averaged Model with Blocking Capability (ALA-BLK)</i>	276
6.4	Submodule-Level Averaged (SLA) Model	278
6.4.1	<i>Vectorized Simulation Models</i>	279
6.5	Submodule-Level Switched (SLS) Model	280
6.5.1	<i>Multiple Phase-Shifted Carrier (PSC) Simulation</i>	281
6.6	Summary	281
	References	282
