Physical Chemistry

Sixth edition

P.W. Atkins

Professor of Chemistry, University of Oxford, and Fellow of Lincoln College

Oxford University Press

Oxford Melbourne Tokyo

1998

'ontents

Conventions xvii

0 Introduction: orientation and background 1

The structure of science 1

Matter 2

Energy 3

0.1 Contributions to the energy 3
0.2 Energy units 4
0.3 Equipartition 4
0.4 The quantization of energy 5
0.5 The populations of states 7
Further reading 9

Part 1: Equilibrium 11

1 The properties of gases 13

The perfect gas 13

1.1 The states of gases 13
1.2 The gas laws 17
1.3 The kinetic model of gases 23

Real gases **30**

1.4 Molecular interactions 31
1.5 The van der Waals equation 33
1.6 The principle of corresponding states 37

Checklist of key ideas 38
Further reading 39
Exercises 39
Problems 42

2 The First Law: the concepts **45**

The basic concepts 45

2.1 Work, heat, and energy 46
2.2 The First Law 48

Work and heat 51

2.3 Expansion work 51
2.4 Heat transactions 55
2.5 Enthalpy 57
2.6 Adiabatic changes 62

Thermochemistry 65

2.7 Standard enthalpy changes 66
2.8 Standard enthalpies of formation 70
2.9 The temperature dependence of reaction enthalpies 72

Checklist of key ideas 73
Further reading 74
Exercises 75
Problems 78

3 The First Law: the machinery 81

State functions and exact differentials 81

3.1 State functions 82
3.2 The temperature dependence of the enthalpy **86**
3.3 The relation between C_v and C_p **90**

Checklist of key ideas **92**
Further reading **92**
Exercises **92**
Problems **93**

4 The Second Law: the concepts **97**

The direction of spontaneous change **98**

4.1 The dispersal of energy **98**
4.2 Entropy
4.3 Entropy changes accompanying specific processes 106
4.4 The Third Law of thermodynamics 110
4.5 Reaching very low temperatures 112

Concentrating on the system 113

4.6 The Helmholtz and Gibbs energies 113
4.7 Standard molar Gibbs energies 118

Checklist of key ideas 119
Further reading 120
Exercises 120
Problems 122

5 The Second Law: the machinery **125**

Combining the First and Second Laws **125**

5.1 Properties of the internal energy 126
5.2 Properties of the Gibbs energy 128
5.3 The chemical potential of a pure substance 132

Real gases: the fugacity 132

5.4 The definition of fugacity 133
5.5 Standard states of real gases 133
5.6 The relation between fugacity and pressure 133

Checklist of key ideas 136
Further reading 136
Exercises 137
Problems 137

6 Physical transformations of pure substances **141**

Phase diagrams **141**

6.1 The stabilities of phases 142
6.2 Phase boundaries 142
6.3 Three typical phase diagrams 143

Phase stability and phase transitions **145**

6.4 The thermodynamic criterion of equilibrium 145
6.5 The dependence of stability on the conditions 146
6.6 The location of phase boundaries 150
6.7 The Ehrenfest classification of phase transitions 152

The physical liquid surface **154**

6.8 Surface tension 154
6.9 Curved surfaces 155
6.10 Capillary action 157

Checklist of key ideas 159
Further reading 159
Exercises 160
Problems 161

***1* Simple mixtures** **163**

The thermodynamic description of mixtures **163**

7.1 Partial molar quantities 164
7.2 The thermodynamics of mixing 169
7.3 The chemical potentials of liquids 171

The properties of solutions **176**

7.4 Liquid mixtures 176
7.5 Colligative properties 177

Activities **182**

7.6 The solvent activity 182
7.7 The solute activity 183

Checklist of key ideas 186
Further reading 187
Exercises 187
Problems 189

8 Phase diagrams **191**

Phases, components, and degjpes of freedom **191**

8.1 Definitions 192
8.2 The phase rule 193

Two-component systems **195**

8.3 Vapour pressure diagrams 195
8.4 Temperature-composition diagrams 199
8.5 Liquid-liquid phase diagrams 201
8.6 Liquid-solid phase diagrams 204
8.7 Ultrapurity and controlled impurity 207

Checklist of key ideas 208
Further reading 208
Exercises 209
Problems 212

9 Chemical equilibrium < **215**

Spontaneous chemical reactions **215**

9.1 The Gibbs energy minimum 215

The response of equilibria to the conditions **222**

9.2 How equilibria respond to pressure 223
9.3 The response of equilibria to temperature 224

Applications to selected systems **227**

9.4 The extraction of metals from their oxides 227
9.5 Acids and bases 229
9.6 Biological activity: the thermodynamics of ATP 235

Checklist of key ideas
Further reading
Exercises
Problems

10 Equilibrium electrochemistry

The thermodynamic properties of ions in solution

10.1 Thermodynamic functions of formation
10.2 Ion activities

Electrochemical cells **253**

10.3 Half-reactions and electrodes
10.4 Varieties of cells
10.5 Standard potentials

Applications of standard potentials

10.6 The electrochemical series 265
10.7 Solubility constants 266
10.8 The measurement of pH and *pK* 267
10.9 Thermodynamic functions from cell potential measurements 268

Checklist of key ideas 271
Further reading 271
Exercises 272
Problems 274

MicroProjects 1 **278**

Part 2: Structure **283**

11 Quantum theory: introduction and principles **285**

The origins of quantum mechanics **285**

11.1 The failures of classical physics 286
11.2 Wave-particle duality 290

The dynamics of microscopic systems **294**

11.3 The Schrodinger equation 294
11.4 The Born interpretation of the wavefunction 296

Quantum mechanical principles **299**

11.5 The information in a wavefunction 299
11.6 The uncertainty principle 306

Checklist of key ideas 308
Further reading 309
Exercises 309
Problems 310

12 Quantum theory: techniques and applications 313

Translational motion 313

12.1 A particle in a box 314
12.2 Motion in two dimensions 319
12.3 Tunnelling 321

Vibrational motion 324

12.4 The energy levels 324
12.5 The wavefunctions 325

Rotational motion 329

12.6 Rotation in two dimensions 329
12.7 Rotation in three dimensions 333
12.8 Spin 337

Checklist of key ideas 338
Further reading 339
Exercises 339
Problems 340

13 Atomic structure and atomic spectra 343

The structure and spectra of hydrogenic atoms 344

13.1 The structure of hydrogenic atoms 345
13.2 Atomic orbitals and their energies 350
13.3 Spectroscopic transitions and selection rules 360

The structures of many-electron atoms 361

13.4 The orbital approximation 361
13.5 Self-consistent field orbitals 369

The spectra of complex atoms 370

13.6 Quantum defects and ionization limits 371
13.7 Singlet and triplet states 371
13.8 Spin-orbit coupling 372
13.9 Term symbols and selection rules 375
13.10 The effect of magnetic fields 380

Checklist of key ideas 381
Further reading 382
Exercises 383
Problems 384

14 Molecular structure 387

The Born-Oppenheimer approximation 387

Valence-bond theory 388

14.1 The hydrogen molecule 388
14.2 Homonuclear diatomic molecules 390
14.3 Polyatomic molecules 391

Molecular orbital theory 394

14.4 The hydrogen molecule-ion 395
14.5 The structures of diatomic molecules 398
14.6 More about notation 404
14.7 Heteronuclear diatomic molecules 405

Molecular orbitals for polyatomic systems 410

14.8 Walsh diagrams 410
14.9 The Huckel approximation 412
14.10 The band theory of solids 418

Checklist of key ideas 421
Further reading *411*
Exercises 423
Problems 424

15 Molecular symmetry 427

The symmetry elements of objects 427

15.1 Operations and symmetry elements 428
15.2 The symmetry classification of molecules 430
15.3 Some immediate consequences of symmetry 435

Character tables 436

15.4 Character tables and symmetry labels 436
15.5 Vanishing integrals and orbital overlap 442
15.6 Vanishing integrals and selection rules 446

Checklist of key ideas 448
Further reading 448
Exercises 449
Problems 450

16 Spectroscopy 1: rotational and vibrational spectra 453

General features of spectroscopy 454

16.1 Experimental techniques 454
16.2 The intensities of spectral lines 458
16.3 Linewidths 462

Pure rotation spectra 463

16.4 Moments of inertia 463
16.5 The rotational energy levels 466
16.6 Rotational transitions 469
16.7 Rotational Raman spectra 472
16.8 Nuclear statistics and rotational states 474

The vibrations of diatomic molecules 475

16.9 Molecular vibrations 476
16.10 Selection rules 477
16.11 Anharmonicity 479
16.12 Vibration-rotation spectra 481
16.13 Vibrational Raman spectra of diatomic molecules 483

The vibrations of polyatomic molecules 483

16.14 Normal modes 483
16.15 The vibrational spectra of polyatomic molecules 486
16.16 Vibrational Raman spectra of polyatomic molecules 488

Checklist of key ideas 491
Further reading 492
Exercises 493
Problems 495

17 Spectroscopy 2: electronic transitions 497

The characteristics of electronic transitions 498

17.1 The vibrational structure 498
17.2 Specific types of transitions 501

The fates of electronically excited states 503

17.3 Fluorescence and phosphorescence 503
17.4 Dissociation and predissociation 506

Lasers 507

17.5 General principles of laser action 507
17.6 Practical lasers 511
17.7 Applications of lasers in chemistry 515

Photoelectron spectroscopy 518

17.8 The technique 518
17.9 Ultraviolet photoelectron spectroscopy 520
17.10 X-ray photoelectron spectroscopy 520

Checklist of key ideas 521
Further reading 522
Exercises 522
Problems 524

18 Spectroscopy 3: magnetic resonance 527

Nuclear magnetic resonance 527

18.1 Nuclear magnetic moments 528
18.2 The energies of nuclei in magnetic fields 528
18.3 The chemical shift 530
18.4 The fine structure 536

Pulse techniques in NMR 545

18.5 The magnetization vector 545
18.6 Linewidths and rate processes 549
18.7 The nuclear Overhauser effect 554
18.8 Two-dimensional NMR 555
18.9 Solid-state NMR 555

Electron spin resonance 557

18.10 The #-value 558
18.11 Hyperfine structure 558

Checklist of key ideas **562**
Further reading **563**
Exercises **564**
Problems 565

19 Statistical thermodynamics: the concepts 567'

The distribution of molecular states 568

19.1 Configurations and weights 568
19.2 The molecular partition function 573

The internal energy and the entropy 578

19.3 The internal energy 578
19.4 The statistical entropy 580

anonical partition function 582

19.5 The canonical ensemble 583
19.6 The thermodynamic information in the partition function 584
19.7 Independent molecules 585

Checklist of key ideas 588
Further reading 588
Exercises 588
Problems 589

20 Statistical thermodynamics: the machinery 593

Fundamental relations 593

20.1 The thermodynamic functions 593
20.2 The molecular partition function 595

Using statistical thermodynamics 603

20.3 Mean energies 603
20.4 Heat capacities 604
20.5 Equations of state 606
20.6 Residual entropies 608
20.7 Equilibrium constants 609

Checklist of key ideas 614
Further reading 614
Exercises 615
Problems 616

21 Diffraction techniques 619

Crystal structure 620

21.1 Lattices and unit cells 620
21.2 The identification of lattice planes 622

X-ray diffraction 625

21.3 Bragg's law 625
21.4 The powder method 627
21.5 Single-crystal X-ray diffraction 632

Information from X-ray analysis 636

21.6 The packing of identical spheres: metal crystals 637
21.7 Ionic crystals . 638
21.8 Absolute configurations 639

Neutron and electron diffraction 641

21.9 Neutron diffraction 641
21.10 Electron diffraction 642

Checklist of key ideas 643
Further reading 644
Exercises 644
Problems 646

22 The electric and magnetic properties of molecules 649

Electric properties 649

22.1 Permanent and induced electric dipole moments 650
22.2 Refractive index 657

Intermolecular forces 659

22.3 Interactions between dipoles 659
22.4 Repulsive and total interactions 667
22.5 Molecular interactions in beams 668

Magnetic properties 670

22.6 Magnetic susceptibility 670
22.7 The permanent magnetic moment 672
22.8 Induced magnetic moments 672

Checklist of key ideas 673
Further reading 673
Exercises 674
Problems 675

23 Macromolecules and colloids 679

Size and shape 679

23.1 Mean molar masses 680
23.2 Colligative properties 682
23.3 Sedimentation 686
23.4 Viscosity 690
23.5 Light scattering 692

Conformation and configuration 695

23.6 Random coils 695
23.7 Helices and sheets 699
23.8 Higher-order structures 701

Colloids and surfactants 702

23.9 The properties of colloids 702
23.10 Surface films 706

Checklist of key ideas 709
Further reading 710
Exercises 111
Problems 712

MicroProjects 2 716

Part 3: Change $ 721

24 Molecules in motion 723

Molecular motion in gases 723

24.1 Collisions with walls and surfaces 724
24.2 The rate of effusion 725
24.3 Migration down gradients 727
24.4 Transport properties of a perfect gas 728

Motion in liquids 732

24.5 The structures of liquids 732
24.6 Molecular motion in liquids 736
24.7 The conductivities of electrolyte solutions 737
24.8 The mobilities of ions 740
24.9 Conductivities and ion-ion interactions 745

Diffusion 746

24.10 The thermodynamic view 746
24.11 The diffusion equation 750
24.12 Diffusion probabilities 753
24.13 The statistical view 754

Checklist of key ideas 755
Further reading 756
Exercises 757
Problems 759

25 The rates of chemical reactions 761

Empirical chemical kinetics 761

25.1 Experimental techniques 762
25.2 The rates of reactions 763
25.3 Integrated rate laws 767
25.4 Reactions approaching equilibrium 771
25.5 The temperature dependence of reaction rates 775

Accounting for the rate laws 777

25.6 Elementary reactions 777
25.7 Consecutive elementary reactions 778
25.8 Unimolecular reactions 784

Checklist of key ideas 787
Further reading 787
Exercises 788
Problems 789

26 The kinetics of complex reactions 793

Chain reactions 793

26.1 The structure of chain reactions 793
26.2 Explosions 797
26.3 Photochemical reactions 799

Polymerization kinetics 802

26.4 Chain polymerization 802
26.5 Stepwise polymerization 805

Catalysis and oscillation 807

26.6 Homogeneous catalysis 807
26.7 Autocatalysis 808
26.8 Oscillating reactions • 809
26.9 Chemical chaos 813

Checklist of key ideas 813
Further reading 814
Exercises 815
Problems 816

27 Molecular reaction dynamics 819

Reactive encounters 819

27.1 Collision theory 820
27.2 Diffusion-controlled reactions 825
27.3 The material-balance equation 828

Activated complex theory 830

27.4 The reaction coordinate and the transition state 830
27.5 The Eyring equation 830
27.6 Thermodynamic aspects 834

The dynamics of molecular collisions 837

27.7 Reactive collisions 837
27.8 Potential energy surfaces 838
27.9 Some results from experiments and calculations 839

Checklist of key ideas 843
Further reading 844
Exercises 844
Problems 846

28 Processes at solid surfaces 849

The growth and structure of solid surfaces 849

28.1 Surface growth 849
28.2 Surface composition 851

The extent of adsorption 857

28.3 Physisorption and chemisorption 857
28.4 Adsorption isotherms 858
28.5 The rates of surface processes 863

Catalytic activity at surfaces 866

28.6 Adsorption and catalysis 866
28.7 Examples of catalysis Rfifi ouo

Checklist of key ideas 871
