

W. Schnabel

Polymer Degradation

Principles and Practical Applications

Hanser Publishers, Munich Vienna New York Barcelona

Distributed in the United States of America and Canada
by Oxford University Press, New York

Contents

1	Introduction	13
1.1	Definitions	13
1.2	Modes of Polymer Degradation	14
1.3	Mechanistic Aspects	15
1.3.1	Single Step Processes and Chain Reactions	15
1.3.2	Autoxidation	17
1.3.3	Random and Specific Site Attack	19
1.4	Detection of Polymer Degradation	20
1.4.1	Changes in Molecular Size	20
1.4.2	Analytical Techniques Applied in Polymer Degradation	23
	References to Chapter 1	24
2	Thermal Degradation	25
2.1	Introduction	25
2.2	Methods for the Evaluation of Heat Resistance	26
2.3	Mechanistic Aspects	29
2.4	Heat Resistant Polymers	38
2.5	Ablation	47
2.6	Stabilization	48
2.7	Thermal Decomposition and Polymer Analysis	52
2.8	Thermal Degradation and Recycling	54
2.9	Heat Effects in Biopolymers	58
	References to Chapter 2	61
3	Mechanical Degradation	64
3.1	Introduction	64
3.2	Mechanistic Aspects	65
3.2.1	Phenomenological Considerations	65
3.2.2	Evidence for Bond Rupture	65
3.2.3	Theoretical Aspects of Bond Rupture and Experimental Findings	70
3.2.4	Polymer Degradation in Solution	74
3.3	Ultrasonic Degradation	76
3.3.1	The Importance of Ultrasonic Degradation	76
3.3.2	Experimental Methods	77
3.3.3	Mechanism of Ultrasonic Degradation	78
3.3.4	Degradation Studies	79
3.4	Applications	81
3.4.1	Stress-induced Chemical Alterations of Polymers	81
3.4.2	Drag Reducers and Viscosity Index Improvers	82
3.4.3	Freezing and Thawing	84
3.4.4	Mastication of Natural and Synthetic Rubber	86
3.4.5	Mechanochemical Synthesis of Block and Graft Copolymers	89
	References to Chapter 3	91

4	Photodegradation	95
4.1	Introduction	95
4.1.1	General Remarks	95
4.1.2	Light Sources	96
4.1.3	Light Absorption and Quantum Yield	97
4.1.4	Chemical Reactions	100
4.2	Mechanistic Aspects	101
4.2.1	Excited States, Free Radicals and Ionic Species	101
4.2.2	Energy Transfer and Energy Migration	106
4.3	Degradation in the Absence of Oxygen	111
4.4	Photooxidation	113
4.4.1	Autoxidative Processes	113
4.4.2	Sensitized and Additive-Initiated Degradation	115
4.4.3	Stabilization	117
4.4.4	Singlet Oxygen Reactions	122
4.5	Applications	123
4.5.1	Polymers with Predictable Lifetime	123
4.5.2	Photoresists	125
4.5.3	Residue-free Decomposition with the Aid of Lasers	126
	References to Chapter 4	127
5	Degradation by High Energy Radiation	131
5.1	Introduction	131
5.1.1	Types of Radiation and their Relevance to Polymer Degradation	131
5.1.2	Absorption of Radiation	133
5.2	Mechanistic Aspects	135
5.2.1	Reactive Intermediates	135
5.2.2	Simultaneous Crosslinking and Degradation	137
5.3	Special Aspects of Degradation in Bulk Synthetic Polymers	140
5.3.1	Influence of Oxygen	140
5.3.2	Influence of Absorbed Dose Rate	140
5.3.3	Influence of LET	141
5.3.4	Temperature Effects	141
5.3.5	Radiation Stability and Protection	142
5.4	Radiation Effects in Biopolymers	143
5.5	Applications	145
5.5.1	Electron Beam and γ -Ray Lithography	145
5.5.1.1	Electron and γ -Ray Resists in Microelectronics	145
5.5.1.2	α -Ray Resists in Contact Microscopy	148
5.5.2	Solid Lubricants	149
5.5.3	Graft and Block Copolymerization	149
5.6	Plasmachemistry	149
	References to Chapter 5	151
6	Biodegradation	154
6.1	Introduction	154
6.2	Modes of Biological Degradation	154

6.3 Enzymatic Degradation	155
6.3.1 Biopolymers	155
6.3.1.1 Polysaccharides	157
6.3.1.2 Proteins	161
6.3.1.3 Nucleic Acids	161
6.3.2 Synthetic Polymers	163
6.4 Microbial Degradation of Synthetic Polymers	164
6.5 Synthesis of Biodegradable Polymers	169
6.6 Ecological Aspects	174
References to Chapter 6	176
7 Chemical Degradation	178
7.1 Introduction	178
7.2 Solvolysis	179
7.2.1 Polymer Characterization	181
7.2.2 Stability of Polymeric Materials	183
7.2.3 Commercial Applications Including Recycling	184
7.3 Reactions of Olefinic Double Bonds	186
7.3.1 Metathesis	186
7.3.2 Ozonization	187
7.4 Oxidative Degradation	192
7.4.1 General Aspects	192
7.4.2 Modes of Initiation of Autoxidative Processes	192
7.4.3 Influence of Metals	193
7.4.4 Autoxidation of Polymers	195
7.5 Ionic Degradation	200
7.6 Selective Degradation	204
7.7 Reactions with Air Pollutants	209
7.8 Solvent Stability	210
References to Chapter 7	212
Index	217
