CONTENTS

Preface. ,xv

Chapter 1 Data Envelopment Analysis

1.1. Introduction.....	1
1.2. Envelopment and Multiplier DEA Models.....	2
1.3. Assurance Region DEA Models.....	10
1.4. Slack Based DEA Models.....	11
1.5. Measure-Specific DEA Models.....	13
1.6. Solving DEA with DEA Frontier Software.....	14
1.6.1 DEA Frontier Software.....	14
1.6.2 Organize the Data.....	17
1.6.3 Run the Envelopment Models.....	19
1.6.4 Run the Multiplier Models.....	21
1.6.5 Run the AR Models.....	22
1.6.6 Run the Slack-based Models.....	24
1.6.7 Run the Measure-Specific Models.....	25
References.....	26

Chapter 2 Measuring Efficiency of Highway Maintenance Patrols

2.1. Background.....	29
2.2. DEA Analysis.....	31
2.2.1 The Model and its Factors.....	31
2.2.2 Data and Unbounded Runs.....	33
2.2.3 Bounded Runs.....	36
2.2.4 Deriving a Common Set of Weights.....	36
2.2.5 District Runs.....	37

2.2.6 Analysis of Various Characteristics.....	38
2.3. Output Deterioration with Input Reduction.....	40
2.3.1 Theoretical versus Achievable Targets.....	40
2.3.2 Enforced Input Reduction.....	42
2.3.3 Modeling Output Erosion.....	43
2.4. The Application.....	50
2.4.1 Base-Line Budget Considerations.....	56
2.4.2 Budget Allocation Beyond the Base Line.....	57
2.5. Discussion.....	59
References.....	59

Chapter 3 Prioritizing Highway Accident Sites

3.1. Introduction.....	61
3.2. The Problem.....	62
3.3. Applicability of the DEA Methodology.....	64
3.4. Application to a Sample of Safety Sections.....	66
3.4.1 Selecting Treatments and Sections.....	67
3.5. Conclusions.....	70
References.....	71

Chapter 4 Benchmarking Models: Evaluating the Effect of E-business Activities

4.1. Introduction.....	73
4.2. Variable-benchmark Model.....	75
4.3. Fixed-benchmark Model.....	80
4.4. Benchmarking Models in <i>DEAFRONTIER</i> Software.....	81
4.5. Application to Bank Branches.....	82
4.5.1 Identification of Benchmark Frontier.....	84
4.5.2 Benchmarking the E-branches Against the Traditional Branches.....	85
4.5.3 Benchmarking within e-branches.....	87
4.6. Conclusions.....	90
References.....	91

Chapter 5 Factor Selection Issues in Bank Branch Performance

5.1. Introduction.....	93
5.2. The Problem Setting.....	95
5.3. Discriminant models.....	97
5.3.1 Logistic Regression.....	97
5.3.2 Multiple Discriminant Analysis.....	98
5.3.3 Goal Programming Models.....	99
5.3.4 IGP Models.....	99

5.4. Embedding Expert Knowledge in the Additive DEA Model.....	100
5.4.1 Linking Discriminant Techniques and the Additive DEA Model.....	103
5.4.2 Data Transformation.....	105
5.4.3 DEA Measures.....	105
5.5. The Simulation Experiment.....	106
5.5.1 Methodology.....	106
5.5.2 Estimating the Predictive Model.....	106
5.5.3 Testing the Predictive Model.....	108
5.6. Variables with Imposed Input and Output Status.....	109
5.7. The Input-oriented Model.....	113
5.8. GP Constraint-Enhanced DEA Model.....	117
5.8.1 Imposing Nonlinear Goal Programming Constraints in an Input Oriented DEA Model.....	120
5.8.2 Imposing Linear Goal Programming Constraints in an Input Oriented DEA Model.....	121
5.9. Summary.....	122
References.....	122

Chapter 6 Multicomponent Efficiency Measurement in Banking

6.1. Introduction.....	125
6.2. A Multicomponent Performance Measurement Model.....	127
6.2.1 Multiple Functions and Shared Resources.....	127
6.2.2 The Aggregate Performance Measure.....	130
6.2.3 Function-Specific Performance Measures.....	130
6.2.4 Derivation of $e''(j,e),e)$	131
6.2.5 An Alternative Formulation.....	132
6.2.6 Types of Constraints in Q_2	133
6.2.7 Special Cases.....	134
6.3. An Application.....	135
6.3.1 Model Relaxation.....	137
6.3.2 Results.....	137
6.4. Measuring Multicomponent Efficiency - An Additive Model . . .	139
6.4.1 Addressing Some Shortcomings.....	139
6.4.2 The General Additive Model..... [^]	140
6.4.3 An Additive Model for Sales and Service Components.....	142
6.5. Application to Bank Branches.....	147
6.6. Conclusions.....	150
References.....	150

Chapter 7 DEA and Multicriteria Decision Modeling

7.1. Introduction.....	153
7.2. Case Examples.....	154
7.2.1 Evaluating Capital Construction Projects.....	154
7.2.2 Selecting Automated Test Equipment at Northern Telecom.....	158
7.2.3 Country Risk Evaluation.....	161
7.3. The Model.....	163
7.3.1 The Modified Model.....	168
7.3.2 Implementation Issues.....	173
7.4. Evaluation Relative to Partial Criteria.....	174
7.5. Conclusions.....	180
References.....	180

Chapter 8 Modeling Rank Order Data

8.1. Introduction.....	183
8.2. Problem Settings Involving Ordinal Data.....	184
8.2.1 Ordinal Data in R&D Project Selection.....	184
8.2.2 Efficiency Performance of Korean Telephone Offices.....	187
8.3. Modelling Ordinal Data.....	187
8.4. Solutions to Applications.....	197
8.4.1 R&D Project Efficiency Evaluation.....	197
8.4.2 Evaluation of Telephone Office Efficiency.....	198
8.5. Discussion.....	199
References.....	200

Chapter 9 Resource Allocation in an R&D Department

9.1. Introduction.....	203
9.2. Criteria for Evaluating Research Impact.....	204
9.3. Information Requirements from Management.....	205
9.4. Modelling Resource Allocation - The Basic Idea.....	207
9.5. Developing the Ratings R_p^v	209
9.5.1 Conventional Approach.....	210
9.5.2 A Proper Evaluation of Ordinal Data.....	211
9.5.3 Multiple Voters and Levels of Credibility.....	213
9.6. Building Reallocation.....	216
9.7. Application.....	219
9.8. Concluding Comments.....	222
References.....	222
Appendix A: Benefits.....	224

Chapter 10 Resource Constrained DEA

10.1. Introduction.....225
10.2. Project Prioritization: A Resource-Constrained DEA Approach. 226
 10.2.1 Introduction.....226
 10.2.2 Modelling Preliminaries.....226
 10.2.3 A Prioritization Model.....229
 10.2.4 An Application.....232
10.3. Choice of DEA Model.....234
10.4. Selecting Sites for New Facilities.....236
 10.4.1 Introduction.....236
 10.4.2 Site Selection for a Retail Store Chain.....238
 10.4.3 A DEA Based Model.....240
 10.4.4 An Application.....245
10.5. Extensions to the Selection Model.....250
10.6. Concluding Comments.....252
References.....252

Chapter 11 Multicomponent Efficiency: Measurement and Core Business Identification in Multiplant Firms

11.1. Introduction.....255
11.2. Multicomponent Efficiency Measurement and Core Business Identification.....256
11.3. Multicomponent Model Structures.....258
 11.3.1 Multi-component Efficiency Measurement with Shared Inputs: Non-overlapping Subunits.....258
 11.3.2 Multi-component Efficiency Measurement with Overlapping Subunits.....261
11.4. Modeling Selection of Core Business components.....264
11.5. Application of Core Business Selection Model to a Set of Plants 269
11.6. Discussion.....273
References.....274

Chapter 12 Implementation of Robotics: Identifying Efficient Implementors

12.1. Introduction.....275
12.2. A Model of Implementation Efficiency.....276
 12.2.1 Background.....276
 12.2.2 Assessing the Implementation of Industrial Robotic Systems.....278
 12.2.3 The Model Structure.....279
12.3. The Data.....281

12.4. Analysis of Efficiency.....282

 12.4.1 Preparing the Model for DEA Analysis.....282

 12.4.2 Outcome from the Overall Analysis.....282

 12.4.3 Using the Control Parameters.....284

12.5. Discussion and Summary.....288

References.....289

Appendix 1: Variables in Implementation Efficiency Model.....291

Appendix 2: Site Demographics.....293

Appendix 3: Data Matrix of Variables and Projects.....294

Chapter 13 Setting Performance Targets for New DMUs

13.1. Introduction.....295

13.2. The Performance Target Problem with no Resource Bounds.....296

 13.2.1 The Input Target Problem.....296

 13.2.2 Unimpeded Movement of Inputs.....299

13.3. Restricted Input Space.....301

 13.3.1 Upper Bounds on the x_{in+l}301

 13.3.2 Upper Bounds on the x_{in+i}303

13.4. Nondiscretionary Variables.....305

 13.4.1 Uncertainty in the Nondiscretionary Variable.....306

13.5. Conclusions.....309

References.....309

Chapter 14 Aggregating Preference Rankings

14.1. Introduction.....311

14.2. A Fair Model for Aggregation Preferential Votes.....313

14.3. A Model for Ranking the Candidates.....318

14.4. Cross Evaluation.....323

14.5. Conclusion.....327

References.....327

Chapter 15 Ranking Players in Round Robin Tournaments

15.1. Introduction.....329

15.2. A Model for Rating Players.....330

 15.2.1 Obtaining m th- Generation (Weighted w th- Generation) Scores.....333

15.3. Weak Ranking of Players.....336

 15.3.1 Obtaining WMKS.....342

15.4. Multiple Tournaments.....345

15.5. Partial Tournaments.....347

15.6. Conclusions.....349

References.....349

Chapter 16 Context-Dependent DEA: Models and Extension

16.1. Introduction..... 351
16.2. Context-dependent DEA..... 353
16.3. Context-dependent DEA with Value Judgment..... 356
16.4. Input-oriented Context-dependent DEA..... 359
16.5. Context-dependent DEA Models in DEAFrontier Software..... 362
16.6. Application..... 364
16.7. Conclusions..... 371
References..... 372

Chapter 17 Evaluating Power Plant Efficiency: Hierarchical Models

17.1. Introduction..... 373
17.2. Hierarchical Structures: Power Plants..... 374
17.3. Models for Evaluating Plants Hierarchies..... 376
 17.3.1 The Two-Level Hierarchy..... 376
 17.3.2 Efficiency Adjustments in a Hierarchy..... 379
 17.3.3 The Multi Level Hierarchy..... 380
17.4. Grouping on Levels..... 382
 17.4.1 Deriving an Aggregate Rating..... 383
 17.4.2 A Common Set of Multipliers..... 384
 17.4.3 Multiple Rankings of Attributes..... 385
17.5. Efficiency Analysis of Power Plants: An Example..... 386
 17.5.1 Hierarchical Analysis..... 390
 17.5.2 Hierarchical Analysis..... 391
17.6. Simultaneous Evaluation Across Levels..... 393
17.7. Analysis of Efficiency: An Example..... 397
 17.7.1 Proportional Split of Plant-level Outputs..... 398
17.8. Conclusions..... 399
References..... 400

Subject Index..... 403
