Contents

Preface	xiii
Part A SETTING THE SCENE	1
1 Transportation in a Conflicting Force Field	3
1.1 General background.....	3
1.2 Demarcation of the study	5
1.2.1 Geographical scale	5
1.2.2 Time horizon.....	6
1.2.3 Passenger versus freight transport	6
1.3 Scope and plan of the book	7
2 Transport and the Environment	9
2.1 Introduction.....	9
2.2 The local environmental impacts of transport	9
2.2.1 Local air quality	10
2.2.2 Acidification	10
2.2.3 Solid waste.....	10
2.2.4 Disturbance, interference and intrusion	10
2.2.5 Exhaustion of resources.....	11
2.2.6 Segmentation of landscapes	11
2.3 Climate change	11
2.3.1 Introduction.....	11
2.3.2 The main greenhouse gases.....	12
2.4 Transport and the emission of greenhouse gases.....	15
2.5 Evaluation criteria for the future of transport	18
2.6 Towards possible solutions in transport	19
3 Major Trends in European Transport	21
3.1 Introduction.....	21
3.2 The European environmental and transport policy.....	21
3.2.1 Introduction.....	21
3.2.2 The European transport policy.....	22
3.2.3 The European infrastructure policy.....	23

3.3	Trends in European passenger transport	25
3.3.1	Mobility growth in Western Europe	25
3.3.2	Mobility growth expectations	26
3.4	The modal split	26
3.4.1	Changes in the modal split	26
3.4.2	Modal split expectations	29
3.4.3	Transport distances and motives	30
3.4.4	Conclusions	33
3.5	Spatial trends	34
3.5.1	Trends in regional-economic development at the European level	34
3.5.2	Future regional developments	35
3.5.3	Spatial trends on the European level	38
3.5.4	Spatial trends on the metropolitan (urban) level	38
3.6	Institutional trends	39
3.7	Economic trends	41
3.7.1	The world economy	41
3.7.2	The European economy	43
3.7.3	Economics of the transport sector	43
3.8	Socio-psychological trends	44
3.8.1	Introduction	44
3.8.2	Increase of leisure time	45
3.8.3	Age	45
3.8.4	Individualization	46
3.8.5	Globalization	47
3.8.6	Levelling	47
3.9	Expert views on European transport trends	48
3.9.1	Introduction	48
3.9.2	General views of the experts on trends in transportation	49
3.9.3	The perceived relative importance of transport externalities	49
3.9.4	Expected consequences of various trends on transportation	51
3.10	Conclusions	54
Part B ANALYSIS OF NEW TRANSPORT SYSTEMS		57
4	New Transport Systems: Success and Failure Factors	59
4.1	The potential of transport technology for sustainability	59
4.2	The life cycle of technologies	60
4.2.1	Emergence	60
4.2.2	Growth and maturity	61
4.2.3	Decline	62
4.2.4	Technological opportunities	63

4.3	Spatial factors	63
4.3.1	Location patterns and transport	64
4.3.2	Spatial success and failure factors	65
4.4	Institutional factors	66
4.4.1	Public policy and transport	67
4.4.2	Institutional success and failure factors	69
4.5	Economic factors	71
4.5.1	The financing stage	72
4.5.2	The construction and exploitation stage	76
4.5.3	Lessons from existing projects	77
4.5.4	Economic success and failure factors	77
4.6	Socio-psychological factors	78
4.6.1	Free rider behaviour	79
4.6.2	Determinants of travel behaviour and travel mode use	79
4.6.3	Acceptance and adoption of technologies	83
4.6.4	Improvement of current collective transport systems	83
4.6.5	Technological adjustment of current individual transport systems	84
4.6.6	New collective transport systems	86
4.6.7	New individual modes	87
4.6.8	Socio-psychological success and failure factors	87
4.7	Conclusions	88
5	Innovations in Automobile and Aviation Systems	89
5.1	Introduction	89
5.2	Improvements in current car technology	90
5.3	Alternative fuels	91
5.3.1	Synthetic fuels	93
5.3.2	Biofuels	93
5.3.3	Hydrogen	94
5.4	Trends and future developments in electricity generation	95
5.4.1	Future generation of electricity	96
5.4.2	Future CO ₂ emissions by electricity generation	97
5.5	Electric cars	98
5.5.1	Technical factors	98
5.5.2	Spatial factors	100
5.5.3	Institutional factors	100
5.5.4	Economic factors	101
5.5.5	Socio-psychological factors	102
5.6	Hybrid cars	102
5.7	Fuel cell cars	104
5.8	Guided cars and telematics	105
5.8.1	Technical factors	105
5.8.2	Spatial factors	106
5.8.3	Institutional factors	107

5.8.4	Economic factors	107
5.8.5	Socio-psychological factors	108
5.9	Hydrogen planes	109
5.9.1	Technical factors	109
5.9.2	Spatial factors	111
5.9.3	Institutional factors	111
5.9.4	Economic factors	111
5.9.5	Socio-psychological factors	112
5.10	Conclusions	112
6	The Potential of New Collective Transport Modes	113
6.1	Introduction	113
6.2	The high-speed train	113
6.2.1	Technical factors	114
6.2.2	Spatial factors	116
6.2.3	Institutional factors	116
6.2.4	Economic factors	117
6.2.5	Socio-psychological factors	119
6.3	People movers (Maglev low-speed)	120
6.3.1	General aspects of the Maglev technology	120
6.3.2	Technical factors	124
6.3.3	Spatial factors	124
6.3.4	Institutional factors	124
6.3.5	Economic factors	124
6.3.6	Socio-psychological factors	125
6.4	Maglev high-speed	125
6.4.1	Technical factors	126
6.4.2	Spatial factors	129
6.4.3	Institutional factors	129
6.4.4	Economic factors	130
6.4.5	Socio-psychological factors	131
6.5	Subterranean transport systems	131
6.5.1	Technical factors	131
6.5.2	Spatial factors	134
6.5.3	Institutional factors	135
6.5.4	Economic factors	135
6.5.5	Socio-psychological factors	136
6.6	Conclusions	137
Part C	SCENARIOS FOR SUSTAINABLE TRANSPORT SYSTEMS	139
7	Scenarios for Future Sustainable Transport Systems	14
7.1	Introduction	14
7.2	Scenario features	14

7.2.1	General contents	142
7.2.2	Scenarios versus conventional methods of policy analysis	143
7.3	Scenario types	144
7.3.1	Descriptive vs. normative scenarios	145
7.3.2	Projective vs. prospective scenarios	145
7.3.3	Commonsense oriented vs. expert-based scenarios	146
7.3.4	Trend, reference and knowledge scenarios	146
7.4	Methodology adopted in the study	147
7.5	Conclusions	149
8	The Spider Model for Composing Scenarios	151
8.1	Introduction	151
8.2	The Spider methodology	151
8.2.1	The Spider model	152
8.2.2	The construction of scenarios	155
8.3	The market-oriented scenario	156
8.3.1	Spatial factors	156
8.3.2	Institutional factors	158
8.3.3	Economic factors	159
8.3.4	Socio-psychological factors	161
8.3.5	The transport system in the market-oriented scenario	162
8.4	The regulatory scenario	164
8.4.1	Spatial factors	164
8.4.2	Institutional factors	166
8.4.3	Economic factors	167
8.4.4	Socio-psychological factors	168
8.4.5	The transport system in the regulatory scenario	169
8.5	Comparison of the reference scenarios	171
9	Expert Views on the Future Transport System	173
9.1	Introduction	173
9.2	Expected and desired behavioural choices and policies	174
9.2.1	Opinions about behavioural choices	174
9.2.2	Expected and desired policy measures	176
9.3	Expected and desired developments from a spatial Perspective	178
9.3.1	Expected and desired developments at the European spatial level and the resulting modal split	178
9.3.2	Expected and desired developments at the urban level and the modal split	180
9.4	Expected and desired developments from institutional, economic and socio-psychological perspectives	182
9.5	The transport system in 2030	186

9.5.1	The urban transport system in 2030.....	18
9.5.2	The regional transport system in 2030.....	18
9.5.3	The long-distance transport system in 2030.....	19
9.5.4	Conclusions about the transport system in 2030.....	19
10	New Transport Futures Designed by Expert Opinion.....	19
10.1	Introduction.....	19
10.2	The construction of expert-based scenarios.....	19
10.3	The expected scenario.....	19
10.3.1	Spatial factors.....	19
10.3.2	Institutional factors.....	20
10.3.3	Economic factors.....	20
10.3.4	Socio-psychological factors.....	20
10.3.5	The transport system in the expected scenario.....	20
10.4	The desired scenario.....	20
10.4.1	Spatial factors.....	20
10.4.2	Institutional factors.....	20
10.4.3	Economic factors.....	20
10.4.4	Socio-psychological factors.....	21
10.4.5	The transport system in the desired scenario.....	21
10.5	Reality and wish.....	21
10.6	Introduction to scenario assessments.....	21
10.7	A self-assessment of the expert-based scenarios.....	21
10.7.1	Results of the self-assessment of the expected scenario.....	21
10.7.2	Results of the self-assessment of the desired scenario.....	21
10.8	A reassessment of the expert-based scenarios by European experts.....	21
10.8.1	Results of the reassessment of the expected scenario by European experts.....	21
10.8.2	Results of the reassessment of European experts on the desired scenario.....	21
10.9	Conclusions.....	21
11	A Segment Analysis of Expert Groups for Transport Scenario Design.....	22
11.1	A need for alternative views.....	22
11.2	Description of segments.....	22
11.3	Scenarios per cross-classified subcategory of respondents.....	22
11.3.1	Professional and disciplinary characteristics.....	22
11.3.2	Disciplinary and age characteristics.....	22
11.3.3	Professional and age characteristics.....	23
11.4	Minority scenarios.....	23
11.5	Conclusions.....	24

12 Environmental Impacts: Estimation of CO₂ Emissions	245
12.1 Introduction	245
12.2 Energy consumption and CO ₂ emissions of transport modes	246
12.3 Electricity and motor fuels	248
12.3.1 Electricity generation	248
12.3.2 Motor fuels	251
12.4 Developments in passenger mobility	253
12.4.1 The mobility level in 1989	252
12.4.2 Trends in mobility	252
12.4.3 Dutch mobility predictions	254
12.4.4 The mobility rates in the scenarios	255
12.4.5 The future modal split including new technologies	258
12.5 Analysis results	258
12.5.1 General results	258
12.5.2 Analysis of results for the individual scenarios	259
12.6 Conclusions	263
13 The Realism of Sustainable Mobility: An Assessment of Policy Options	265
13.1 Introduction	265
13.2 Policies of the greenhouse effect	265
13.3 General policy options in transport	267
13.3.1 Trends in transport policies	267
13.3.2 An assessment of transport policy options	268
13.4 Policy options and choices resulting from the scenarios	270
13.4.1 Spatial factors	271
13.4.2 Institutional factors	272
13.4.3 Economic factors	274
13.4.4 Socio-psychological factors	275
13.5 Realism of sustainable mobility	275
