|---|----|--|
| PREFACE   |    |  |
| PART 1 Introduction   |    |  |
| Chapter 1   |    |  |
| <i>Bioprocess Development:<br/>    An Interdisciplinary Challenge</i>                 |    |  |
| 1.1 Steps in Bioprocess Development:<br>A Typical New Product From<br>Recombinant DNA |    |  |
| 1.2 A Quantitative Approach   |    |  |
| Chapter 2   |    |  |
| <i>Introduction to Engineering Calculations</i>                                       | 9  |  |
| 2.1 Physical Variables, Dimensions and Units  | 9  |  |
| 2.1.1 Substantial Variables   | 10 |  |
| 2.1.2 Natural Variables   | 11 |  |
| 2.1.3 Dimensional Homogeneity in Equations  | 11 |  |
| 2.1.4 Equations Without Dimensional<br>Homogeneity                                    | 12 |  |
| 2.2 Units   | 13 |  |
| <i>Example 2.1: Unit conversion</i>   | 14 |  |
| 2.3 Force and Weight  | 15 |  |
| <i>Example 2.2: Use of <math>g_0</math></i>   | 15 |  |
| 2.4 Measurement Conventions   | 16 |  |
| 2.4.1 Density   | 16 |  |
| 2.4.2 Specific Gravity  | 16 |  |
| 2.4.3 Specific Volume   | 16 |  |
| 2.4.4 Mole  | 16 |  |
| 2.4.5 Chemical Composition  | 16 |  |
| 2.4.6 Temperature   | 18 |  |
| 2.4.7 Pressure  | 18 |  |
| 2.5 Standard Conditions and Ideal Gases   | 19 |  |
| <i>Example 2.3: Ideal gas law</i>   | 20 |  |
| 2.6 Physical and Chemical Property Data   | 21 |  |
| 2.7 Stoichiometry   | 22 |  |
| <i>Example 2.4: Stoichiometry of amino acid<br/>    synthesis</i>                     | 22 |  |
| <i>Example 2.5: Incomplete reaction<br/>    and yield</i>                             | 23 |  |
| 2.8 Summary of Chapter 2  | 24 |  |
| Problems  | 24 |  |
| References  | 26 |  |
| Suggestions For Further Reading   | 26 |  |
| Chapter 3   |    |  |
| <i>Presentation and Analysis of Data</i>  | 27 |  |
| 3.1 Errors in Data and Calculations   | 27 |  |
| 3.1.1 Significant Figures   | 27 |  |
| 3.1.2 Absolute and Relative Uncertainty   | 28 |  |
| 3.1.3 Types of Error  | 29 |  |
| 3.1.4 Statistical Analysis  | 29 |  |
| <i>Example 3.1: Mean and standard<br/>    deviation</i>                               | 30 |  |
| 3.2 Presentation of Experimental Data   | 30 |  |
| 3.3 Data Analysis   | 31 |  |
| 3.3.1 Trends  | 32 |  |
| 3.3.2 Testing Mathematical Models   | 33 |  |
| 3.3.3 Goodness of Fit: Least-Squares Analysis   | 34 |  |
| 3.3.4 Linear and Non-Linear Models  | 35 |  |
| 3.4 Graph Paper With Logarithmic<br>Coordinates                                       | 38 |  |
| 3.4.1 Log-Log Plots   | 38 |  |
| 3.4.2 Semi-Log Plots  | 40 |  |
| <i>Example 3-2: Cell growth data</i>  | 41 |  |
| 3.5 General Procedures for Plotting Data  | 42 |  |
| 3.6 Process Flow Diagrams   | 42 |  |
| 3.7 Summary of Chapter 3  | 42 |  |
| Problems  | 43 |  |
| References  | 47 |  |
| Suggestions for Further Reading   | 48 |  |

|                  |   |           |            |  |     |
|------------------|---|-----------|------------|--|-----|
| <b>PART 2</b>    | <b>Material and Energy Balances</b>                             | <b>49</b> | 5.1.1      | Units  | 86  |
|                  |   |           | 5.1.2      | Intensive and Extensive Properties   | 86  |
|                  |   |           | 5.1.3      | Enthalpy   | 87  |
|                  |   |           | 5.2        | General Energy-Balance Equations   | 87  |
| <b>Chapter 4</b> |   |           | 5.2.1      | Special Cases  | 88  |
|                  | <i>Material Balances</i>  | 51        | <b>5.3</b> | Enthalpy Calculation Procedures  | 88  |
| 4.1              | Thermodynamic Preliminaries                                     | 51        | 5.3.1      | Reference States   | 88  |
| 4.1.1            | System and Process  | 51        | 5.3.2      | State Properties   | 89  |
| 4.1.2            | Steady State and Equilibrium                                    | 52        | 5.4        | Enthalpy Change in Non-Reactive Processes                                    | 89  |
| 4.2              | Law of Conservation of Mass                                     | 52        | 5.4.1      | Change in Temperature  | 89  |
|                  | <i>Example 4.1: General mass-balance equation</i>               | 53        |            | <i>Example 5.1: Sensible heat change with constant C</i>                     | 90  |
| 4.2.1            | Types of Material Balance Problem                               | 53        | 5.4.2      | Change of Phase  | 90  |
| 4.2.2            | Simplification of the General Mass-Balance Equation             | <b>53</b> |            | <i>Example 5-2: Enthalpy of condensation</i>                                 | 91  |
| 4.3              | Procedure For Material-Balance Calculations                     | <b>54</b> | 5.4.3      | Mixing and Solution  | 91  |
|                  | <i>Example 4.2: Setting up a flowsheet</i>                      | <b>55</b> |            | <i>Example 5.3: Heat of solution</i>   | 92  |
| <b>4.4</b>       | Material-Balance Worked Examples                                | <b>55</b> | 5.5        | Steam Tables   | 92  |
|                  | <i>Example 4.3: Continuous filtration</i>                       | 56        | 5.6        | Procedure For Energy-Balance Calculations Without Reaction                   | 93  |
|                  | <i>Example 4.4: Batch mixing</i>                                | 59        | 5.7        | Energy-Balance Worked Examples Without Reaction                              | 93  |
|                  | <i>Example 4.5: Continuous acetic acid fermentation</i>         | 62        |            | <i>Example 5-4: Continuous water heater</i>                                  | 94  |
|                  | <i>Example 4.6: Xanthan gum production</i>                      | 67        |            | <i>Example 5-5: Cooling in downstream processing</i>                         | 95  |
| 4.5              | Material Balances With Recycle, By-Pass and Purge Streams       | 72        | 5.8        | Enthalpy Change Due to Reaction  | 97  |
| 4.6              | Stoichiometry of Growth and Product Formation                   | 74        | 5.8.1      | Heat of Combustion   | 97  |
| 4.6.1            | Growth Stoichiometry and Elemental Balances                     | 74        |            | <i>Example 5.6: Calculation of heat of reaction from heats of combustion</i> | 98  |
|                  | <i>Example 4.7: Stoichiometric coefficients for cell growth</i> | 76        | 5.8.2      | Heat of Reaction at Non-Standard Conditions                                  | 98  |
| 4.6.2            | Electron Balances   | 78        | 5.9        | Heat of Reaction For Processes With Biomass Production                       | 99  |
