

# Internetworking With TCP/IP

## Voll:

### Principles, Protocols, and Architecture

### Fourth Edition

DOUGLAS E. COMER

*Department of Computer Sciences  
Purdue University  
West Lafayette, IN 47907*

**PRENTICE HALL**  
**Upper Saddle River, New Jersey 07458**

**TOC**

# Contents

**Foreword** **xxiii**

**Preface** **xxvii**

**Chapter 1 Introduction And Overview** **1**

1.1	<i>The Motivation For Internetworking</i>	1	5
1.2	<i>The TCP IIP Internet</i>	2	
1.3	<i>Internet Services</i>	3	• • ' • *
1.4	<i>History And Scope Of The Internet</i>	6	• -:-i >:•••• •,•
7.5	<i>The Internet Architecture Board</i>	8	' •,:'•,,'• »•••••• • • ,
1.6	<i>The IAB Reorganization</i>	9	' • ••*?>'• • •: • '
1.7	<i>The Internet Society</i>	11	• • • ,
1.8	<i>Internet Request For Comments</i>	11	
1.9	<i>Internet Protocols And Standardization</i>	12	
1.10	<i>Future Growth And Technology</i>	12	
1.11	<i>OrganizationOf The Text</i>	13	
7.72	<i>Summary</i>	14	

**Chapter 2 Review Of Underlying Network Technologies** **17**

2.7	<i>Introduction</i>	17	
2.2	<i>Two Approaches To Network Communication</i>	18	
2.5	<i>Wide Area And Local Area Networks</i>	19	
2.4	<i>Ethernet Technology</i>	20	
2.5	<i>Fiber Distributed Data Interconnect (FDDI)</i>	33	
2.6	<i>Asynchronous Transfer Mode</i>	37	
2.7	<i>WAN Technologies: ARPANET</i>	38	
2.8	<i>National Science Foundation Networking</i>	40	

2.9 ANSNET 44  
 2.70 A Very High Speed Backbone (vBNS) 45  
 2.77 Other Technologies Over Which TCP/IP Has Been Used 46  
 2.72 Summary And Conclusion 50

**Chapter 3 Internetworking Concept And Architecturai Model 53**

3.1 Introduction 53  
 3.2 Application-Level Interconnection 53  
 3.3 Network-Level Interconnection 54  
 3.4 Properties OfThe Internet 55  
 3.5 Internet Architecture 56  
 3.6 Interconnection Through IP Routers 56  
 3.7 The User's View 58  
 3.8 All Networks Are Equal 58  
 3.9 The Unanswered Questions 59  
 3.10 Summary 60

**Chapter 4 Classful Internet Addresses 63**

4.1 Introduction 63  
 4.2 Universal Identifiers 63  
 4.3 The Original Classful Addressing Scheme 64  
 4.4 Addresses Specify Network Connections 65  
 4.5 Network And Directed Broadcast Addresses 65  
 4.6 Limited Broadcast 66  
 4.7 Interpreting Zero To Mean "This" 67  
 4.8 Subnet And Supernet Extensions 67  
 4.9 IP Multicast Addresses 68  
 4.70 Weaknesses In Internet Addressing 68  
 4.77 Dotted Decimal Notation 69  
 4.72 Loopback Address 70  
 4.73 Summary Of Special Address Conventions 70  
 4.74 Internet Addressing Authority 71  
 4.75 Reserved Address Prefixes 72  
 4.76 An Example 72  
 4.77 Network Byte Order 74  
 4.78 Summary 75

## **Chapter 5 Mapping Internet Addresses To Physical Addresses (ARP) 77**

- 5.1 Introduction 11
- 5.2 The Address Resolution Problem 11
- 5.3 Two Types Of Physical Addresses 78
- 5.4 Resolution Through Direct Mapping 78
- 5.5 Resolution Through Dynamic Binding 79
- 5.6 The Address Resolution Cache 80
- 5.7 ARP Cache Timeout 81
- 5.8 ARP Refinements 82
- 5.9 Relationship Of ARP To Other Protocols 82
- 5.10 ARP Implementation 82
- 5.11 ARP Encapsulation And Identification 84
- 5.12 ARP Protocol Format 84
- 5.13 Summary 86

## **Chapter 6 Determining An Internet Address At Startup (RARP) 89**

- 6.1 Introduction 89
- 6.2 Reverse Address Resolution Protocol (RARP) 90
- 6.3 Timing RARP Transactions 92
- 6.4 Primary And Backup RARP Servers 92
- 6.5 Summary 93

## **Chapter 7 Internet Protocol: Connectionless Datagram Delivery 95**

- 7.1 Introduction 95
- 7.2 A Virtual Network 95
- 7.3 Internet Architecture And Philosophy 96
- 7.4 The Conceptual Service Organization 96
- 7.5 Connectionless Delivery System 97
- 7.6 Purpose Of The Internet Protocol 97
- 7.7 The Internet Datagram 97
- 7.8 Internet Datagram Options 107
- 7.9 Summary 113

## **Chapter 8 Internet Protocol: Routing IP Datagrams 115**

- 8.1 Introduction 115
- 8.2 Routing In An Internet 115
- 8.3 Direct And Indirect Delivery 117

- 8.4 *Table-Driven IP Routing* 119
- 8.5 *Next-Hop Routing* 119
- 8.6 *Default Routes* 121
- 8.7 *Host-Specific Routes* 121
- 8.8 *The IP Routing Algorithm* 121
- 8.9 *Routing With IP Addresses* 122
- 8.70 *Handling Incoming Datagrams* 124
- 8.77 *Establishing Routing Tables* 125
- 8.72 *Summary* 125

**Chapter 9 Internet Protocol: Error And Control Messages (ICMP) 129**

- 9.1 *Introduction* 129
- 9.2 *The Internet Control Message Protocol* 129
- 9.3 *Error Reporting vs. Error Correction* 130
- 9.4 *ICMP Message Delivery* 131
- 9.5 *ICMP Message Format* 132
- 9.6 *Testing Destination Reachability And Status (Ping)* 133
- 9.7 *Echo Request And Reply Message Format* 134
- 9.8 *Reports Of Unreachable Destinations* 134
- 9.9 *Congestion And Datagram Flow Control* 136
- 9.70 *Source Quench Format* 136
- 9.77 *Route Change Requests From Routers* 137
- 9.72 *Detecting Circular Or Excessively Long Routes* 139
- 9.73 *Reporting Other Problems* 140
- 9.14 *Clock Synchronization And Transit Time Estimation* 140
- 9.15 *Information Request And Reply Messages* 142
- 9.76 *Obtaining A Subnet Mask* 142
- 9.77 *Router Discovery* 143
- 9.18 *Router Solicitation* 144
- 9.79 *Summary* 145

**Chapter 10 Classes And Subnet Address Extensions (CIDR) 147**

- 70.7 *Introduction* 147
- 70.2 *Review Of Relevant Facts* 147
- 70.3 *Minimizing Network Numbers* 148
- 10.4 *Transparent Routers* 149
- 70.5 *Proxy ARP* 150
- 70.6 *Subnet Addressing* 152
- 70.7 *Flexibility In Subnet Address Assignment* 154
- 70.8 *Variable-Length Subnets* 155

70.9	<i>Implementation Of Subnets With Masks</i>	156
70.70	<i>Subnet Mask Representation</i>	157
70.77	<i>Routing In The Presence Of Subnets</i>	158
70.72	<i>The Subnet Routing Algorithm</i>	159
70.73	<i>A Unified Routing Algorithm</i>	160
70.74	<i>Maintenance Of Subnet Masks</i>	161
70.75	<i>Broadcasting To Subnets</i>	161
70.76	<i>Anonymous Point-To-Point Networks</i>	162
70.77	<i>Classless Addressing (Supernetting)</i>	164
70.78	<i>The Effect Of Supernetting On Routing</i>	165
70.79	<i>CIDR Address Blocks And Bit Masks</i>	165
70.20	<i>Address Blocks And CIDR Notation</i>	166
70.27	<i>A Classless Addressing Example</i>	167
70.22	<i>Data Structures And Algorithms For Classless Lookup</i>	167
70.23	<i>Longest-Match Routing And Mixtures Of Route Types</i>	170
70.24	<i>CIDR Blocks Reserved For Private Networks</i>	172
70.25	<i>Summary</i>	173

## **Chapter 11 Protocol Layering**

**177**

77.7	<i>Introduction</i>	177
77.2	<i>The Need For Multiple Protocols</i>	177
77.3	<i>The Conceptual Layers Of Protocol Software</i>	178
77.4	<i>Functionality Of The Layers</i>	181
77.5	<i>X.25 And Its Relation To The ISO Model</i>	182
77.6	<i>Differences Between ISO And Internet Layering</i>	185
77.7	<i>The Protocol Layering Principle</i>	187
77.8	<i>Layering In The Presence Of Network Substructure</i>	189
77.9	<i>Two Important Boundaries In The TCP/IP Model</i>	191
77.70	<i>The Disadvantage Of Layering</i>	192
77.77	<i>The Basic Idea Behind Multiplexing And Demultiplexing</i>	192
77.72	<i>Summary</i>	194

## **Chapter 12 User Datagram Protocol (UDP)**

**197**

72.7	<i>Introduction</i>	197
72.2	<i>Identifying The Ultimate Destination</i>	197
72.3	<i>The User Datagram Protocol</i>	198
72.4	<i>Format Of UDP Messages</i>	199
72.5	<i>UDP Pseudo-Header</i>	200
72.6	<i>UDP Encapsulation And Protocol Layering</i>	201
72.7	<i>Layering And The UDP Checksum Computation</i>	203

72.8	<i>UDP Multiplexing, Demultiplexing, And Ports</i>	203
72.9	<i>Reserved And Available UDP Port Numbers</i>	204
72.70	<i>Summary</i>	206

## **Chapter 13 Reliable Stream Transport Service (TCP)**

209

73.7	<i>Introduction</i>	209
73.2	<i>The Need For Stream Delivery</i>	209
73.3	<i>Properties Of The Reliable Delivery Service</i>	210
73.4	<i>Providing Reliability</i>	211
73.5	<i>The Idea Behind Sliding Windows</i>	213
73.6	<i>The Transmission Control Protocol</i>	215
73.7	<i>Ports, Connections, And Endpoints</i>	216
73.8	<i>Passive And Active Opens</i>	218
73.9	<i>Segments, Streams, And Sequence Numbers</i>	219
73.70	<i>Variable Window Size And Flow Control</i>	220
73.77	<i>TCP Segment Format</i>	221
73.72	<i>Out Of Band Data</i>	222
73.73	<i>Maximum Segment Size Option</i>	223
73.74	<i>TCP Checksum Computation</i>	224
73.75	<i>Acknowledgements And Retransmission</i>	225
73.76	<i>Timeout And Retransmission</i>	226
73.77	<i>Accurate Measurement Of Round Trip Samples</i>	228
73.78	<i>Kam s Algorithm And Timer Backoff</i>	229
73.19	<i>Responding To High Variance In Delay</i>	230
73.20	<i>Response To Congestion</i>	232
73.27	<i>Congestion, Tail Drop, And TCP</i>	234
73.22	<i>Random Early Discard (RED)</i>	235
73.23	<i>Establishing A TCP Connection</i>	237
73.24	<i>Initial Sequence Numbers</i>	239
73.25	<i>Closing a TCP Connection</i>	239
73.26	<i>TCP Connection Reset</i>	241
73.27	<i>TCP State Machine</i>	241
73.28	<i>Forcing Data Delivery</i>	243
73.29	<i>Reserved TCP Port Numbers</i>	243
73.30	<i>TCP Performance</i>	243
73.37	<i>Silly Window Syndrome And Small Packets</i>	245-
73.32	<i>Avoiding Silly Window Syndrome</i>	246
73.33	<i>Summary</i>	249

## Chapter 14 Routing: Cores, Peers, And Algorithms 253

- 74.7 *Introduction* 253
- 74.2 *The Origin Of Routing Tables* 254
- 74.3 *Routing With Partial Information* 255
- 74.4 *Original Internet Architecture And Cores* 256
- 74.5 *Core Routers* 257
- 74.6 *Beyond The Core Architecture To Peer Backbones* 260
- 74.7 *Automatic Route Propagation* 262
- 74.8 *Distance Vector (Bellman-Ford) Routing* 262
- 74.9 *Gateway-To-Gateway Protocol (GGP)* 264
- 74.70 *Distance Factoring* 265
- 74.77 *Reliability And Routing Protocols* 265
- 74.72 *Link-State (SPF) Routing* 266
- 74.73 *Summary* 267

## Chapter 15 Routing: Exterior Gateway Protocols And Autonomous Systems (BGP) 269

- 75.7 *Introduction* 269
- 75.2 *Adding Complexity To The Architectural Model* 269
- 75.3 *Determining A Practical Limit On Group Size* 270
- 75.4 *A Fundamental Idea: Extra Hops* 271
- 75.5 *Hidden Networks* 213
- 15.6 *Autonomous System Concept* 214
- 15.7 *From A Core To Independent Autonomous Systems* 275
- 75.8 *An Exterior Gateway Protocol* 276
- 75.9 *BGP Characteristics* 277
- 75.70 *BGP Functionality And Message Types* 278
- 75.77 *BGP Message Header* 278
- 75.72 *BGP OPEN Message* 279
- 75.73 *BGP UPDATE Message* 280
- 75.74 *Compressed Mask-Address Pairs* 281
- 75.75 *BGP Path Attributes* 282
- 75.76 *BGP KEEPALIVE Message* 283
- 75.77 *Information From The Receiver's Perspective* 284
- 75.78 *The Key Restriction Of Exterior Gateway Protocols* 285
- 75.79 *The Internet Routing Arbiter System* 287
- 75.20 *BGP NOTIFICATION Message* 288
- 75.27 *Decentralization Of Internet Architecture* 289
- 75.22 *Summary* 290

## Chapter 16 Routing: In An Autonomous System (RIP, OSPF, HELLO) 293

- 76.7 Introduction 293
- 76.2 Statte Vs. Dynamic Interior Routes 293
- 76.3 Routing Information Protocol (RIP) 296
- 76.4 The Hello Protocol 305
- 76.5 Delay Metrics And Oscillation 305
- 76.6 Combining RIP, Hello, And BGP 307
- 76.7 Inter-Autonomous System Routing 307
- 76.8 Gated: Inter-Autonomous System Communication 308
- 76.9 The Open SPF Protocol (OSPF) 308
- 76.70 Routing With Partial Information 315
- 76.77 Summary 315

## Chapter 17 Internet Multicasting 319

- 77.7 Introduction 319
- 77.2 Hardware Broadcast 319
- 77.3 Hardware Origins Of Multicast 320
- 77.4 Ethernet Multicast 321
- 77.5 IP Multicast 321
- 77.6 The Conceptual Pieces 322
- 77.7 IP Multicast Addresses 323
- 77.8 Multicast Address Semantics 325
- 77.9 Mapping IP Multicast To Ethernet Multicast 325
- 77.70 Hosts And Multicast Delivery 326
- 77.77 Multicast Scope 326
- 77.72 Extending Host Software To Handle Multicasting 327
- 77.73 Internet Group Management Protocol 328
- 77.74 IGMP Implementation 328
- 77.75 Group Membership State Transitions 329
- 77.76 IGMP Message Format 331
- 77.77 Multicast Forwarding And Routing Information 332
- 77.78 Basic Multicast Routing Paradigms 334
- 77.79 ConsequencesOfTRPF 335
- 77.20 Multicast Trees 337
- 77.27 The Essence Of Multicast Routing 338
- 77.22 Reverse Path Multicasting 338
- 77.23 Distance Vector Multicast Routing Protocol 339
- 77.24 The Mrouted Program 340
- 77.25 Alternative Protocols 343
- 77.26 Core Based Trees (CBT) 343
- 77.27 Protocol Independent Multicast (PIM) 344

Contents.

77.28 *Multicast Extensions To OSPF (MOSPF)* 347  
77.29 *Reliable Multicast And ACK Implosions* 347  
77.30 *Summary* 349

**Chapter 18 TCP/IP Over ATM Networks**

**353**

78.7 *Introduction* 353  
78.2 *ATM Hardware* 354  
78.3 *Large ATM Networks.* 354  
78.4 *The Logical View Of An ATM Network* 355  
78.5 *The Two ATM Connection Paradigms* 356  
78.6 *Paths, Circuits, And Identifiers* 357  
78.7 *ATM Cell Transport* 358  
78.8 *ATM Adaptation Layers* 358  
78.9 *ATM Adaptation Layer 5* 360  
78.70 *AAL5 Convergence, Segmentation, And Reassembly* 361  
78.77 *Datagram Encapsulation And IP MTU Size* 361  
78.72 *Packet Type And Multiplexing* 362  
78.73 *IP Address Binding In An ATM Network* 363  
78.74 *Logical IP Subnet Concept* 364  
78.75 *Connection Management* 365  
78.76 *Address Binding Within An LIS* 366  
78.77 *ATMARP Packet Format* 366  
18.18 *Using ATMARP Packets To Determine An Address* 369  
78.79 *Obtaining Entries For A Server Database* 370  
78.20 *Timing Out ATMARP Information In A Server* 370  
78.27 *Timing Out ATMARP Information In A Host Or Router* 371  
78.22 *IP Switching Technologies* 371  
78.23 *Switch Operation* 372  
78.24 *Optimized IP Forwarding* 372  
78.25 *Classification, Flows, And Higher Layer Switching* 373  
78.26 *Applicability Of Switching Technology* 314  
18.27 *Summary* 374

**Chapter 19 Mobile IP**

**377**

79.7 *Introduction* 377  
79.2 *Mobility, Routing, and Addressing* 311  
79.3 *Mobile IP Characteristics* 378  
79.4 *Overview Of Mobile IP Operation* 378  
19.5 *Mobile-Addressing Details* 379  
79.6 *Foreign Agent Discovery* 380

79.7 *Agent Registration* 381 —  
 79.8 *Registration Message Format* 381  
 79.9 *Communication With A Foreign Agent* 383  
 79.70 *Datagram Transmission And Reception* 383  
 79.77 *The Two-Crossing Problem* 384  
 19.12 *Communication With Computers On the HomeNetwork* 385  
 79.73 *Summary* 386

**Chapter 20 Private Network Interconnection (NAT, VPN) 389**

20.7 *Introduction* 389  
 20.2 *Private And Hybrid Networks* 389  
 20.3 *A Virtual Private Network (VPN)* 390  
 20.4 *VPN Addressing And Routing* 392  
 20.5 *A VPN With Private Addresses* 393  
 20.6 *Network Address Translation (NAT)* 394  
 20.7 *NAT Translation Table Creation* 395  
 20.8 *Multi-Address NAT* 396  
 20.9 *Port-Mapped NAT* 396  
 20.70 *Interaction Between NAT And ICMP* 398  
 20.77 *Interaction Between NAT And Applications* 398  
 20.72 *Conceptual Address Domains* 399  
 20.73 *5/rp And Masquerade* 399  
 20.74 *Summary* 400

**Chapter 21 Client-Server Model Of Interaction 403**

27.7 *Introduction* 403  
 27.2 *The Client-Server Model* 403  
 27.3 *A Simple Example: UDP Echo Server* 404  
 21.4 *Time And Date Service* 406  
 27.5 *The Complexity of Servers* 407  
 27.6 *RARP Server* 408  
 27.7 *Alternatives To The Client-Server Model* 409  
 27.8 *Summary* 410

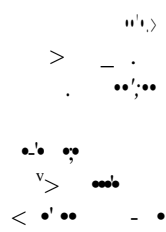

**Chapter 22 The Socket Interface 413**

22.7 *Introduction* 413  
 22.2 *THE UNIX I/O Paradigm And Network I/O* > 414  
 22.3 *Adding Network I/O to UNIX* • 414 v

22.4 *The Socket Abstraction* 415  
 22.5 *Creating A Socket* 415  
 22.6 *Socket Inheritance And Termination* 416  
 22.7 *Specifying A Local Address* 417  
 22.8 *Connecting Sockets To Destination Addresses* 418  
 22.9 *Sending Data Through A Socket* 419  
 22.10 *Receiving Data Through A Socket* 421  
 22.77 *Obtaining Local And Remote Socket Addresses* 422  
 22.72 *Obtaining And Setting Socket Options* 423  
 22.73 *Specifying A Queue Length For A Server* 424  
 22.74 *How A Server Accepts Connections* 424  
 22.75 *Servers That Handle Multiple Services* 425  
 22.76 *Obtaining And Setting Host Names* 426  
 22.77 *Obtaining And Setting The Internet Host Domain* 427  
 22.78 *Socket Library Calls* 427  
 22.79 *Network Byte Order Conversion Routines* 428  
 22:20 *IP Address Manipulation Routines* 429  
 22.27 *Accessing The Domain Name System* 431  
 22.22 *Obtaining Information About Hosts* 432  
 22.23 *Obtaining Information About Networks* 433  
 22.24 *Obtaining Information About Protocols* 434  
 22.25 *Obtaining Information About Network Services* 434  
 22.26 *An Example Client* 435  
 22.27 *An Example Server* 437  
 22.28 *Summary* 440

**Chapter 23 Bootstrap And Autoconfiguration (BOOTP, DHCP)**

23.7 *Introduction* 443  
 23.2.' *The Need For An Alternative To RARP* 444  
 23.3 *Using IP To Determine An IP Address* 444  
 23.4 *The BOOTP Retransmission Policy* 445  
 23.5 *The BOOTP Message Format* 446  
 23.6 *The Two-Step Bootstrap Procedure* 447  
 23.7 *Vendor-Specific Field* 448  
 23.8 *The Need For Dynamic Configuration* 448  
 23.9 *Dynamic Host Configuration* 450  
 23.70 *Dynamic IP Address Assignment* 450  
 23.11 *Obtaining Multiple Addresses* 451  
 23.72 *Address Acquisition States* 452  
 23.73 *Early Lease Termination* 452  
 23.74 *Lease Renewal States* 454  
 23.75 *DHCP Message Format* 455

23.76 *DHCP Options And Message Type* 456  
 23.77 *Option Overload* 457  
 23.78 *DHCP And Domain Names* 457  
 23.79 *Summary* 458

**Chapter 24 The Domain Name System (DNS)**

**461**

24.7 *Introduction* 461  
 24.2 *Names For Machines* 462  
 24.3 *Fiat Namespace* 462  
 24.4 *Hierarchical Names* 463  
 24.5 *Delegation Of Authority For Names* 464  
 24.6 *Subset Authority* 464  
 24.7 *Internet Domain Names* 465  
 24.8 *Official And Unofficial Internet Domain Names* 466  
 24.9 *Named Items And Syntax Of Names* 468  
 24.70 *Mapping Domain Names To Addresses* 469  
 24.77 *Domain Name Resolution* All  
 24.72 *Efficient Translation* 472  
 24.73 *Caching: The Key To Efficiency* 473  
 24.74 *Domain Server Message Format* 474  
 24.75 *CompressedName Format* 477  
 24.76 *Abbreviation Of Domain Names* 477  
 24.77 *Inverse Mappings* 478  
 24.78 *Pointer Queries* 479  
 24.79 *Object Types And Resource Record Contents* 479  
 24.20 *Obtaining Authority For A Subdomain* 480  
 24.27 *Summary* 481

**Chapter 25 Applications: Remote Login (TELNET, Rlogin)**

**485**

25.1 *Introduction* 485  
 25.2 *Remote Interactive Computing* 485  
 25.3 *TELNET Protocol* 486  
 25.4 *Accommodating Heterogeneity* 488  
 25.5 *Passing Commands That Control The Remote Side* 490  
 25.6 *Forcing The Server To Read-A Control Function* 492  
 25.7 *TELNET Options* 492  
 25.8 *TELNET Option Negotiation* 493  
 25.9 *Rlogin (BSD UNIX)* 494  
 25.70 *Summary* 495

**Chapter 26 Applications: File Transfer And Access (FTP, TFTP, NFS) 497**

- 26.7 *Introduction* 497
- 26.2 *File Access And Transfer* 497
- 26.3 *On-line Shared Access* 498
- 26.4 *Sharing By File Transfer* 499
- 26.5 *FTP: The Major TCP/IP File Transfer Protocol* 499
- 26.6 *FTP Features* 500
- 26.7 *FTP Process Model* 500
- 26.8 *TCP Port Number Assignment* 502
- 26.9 *The Users View OfFTP* 502
- 26.70 *An Example Anonymous FTP Session* 504
- 26.77 *TFTP* 505
- 26.72 *NFS* 507
- 26.73 *NFS Implementation* 507
- 26.74 *Remote Procedure Call (RPC)* 508
- 26.75 *Summary* 509

**Chapter 27 Applications: Electronic Mail (SMTP, POP, IMAP, MIME) 511**

- 27.7 *Introduction* 511
- 27.2 *Electronic Mail* 511
- 27.3 *Mailbox Names And Aliases* 513
- 27.4 *Alias Expansion And Mail Forwarding* 513
- 27.5 *The Relationship Of Internetworking And Mail* 514
- 27.6 *TCP IIP Standards For Electronic Mail Service* 516
- 27.7 *Electronic Mail Addresses* 516
- 27.8 *Pseudo Domain Addresses* 518
- 27.9 *Simple Mail Transfer Protocol (SMTP)* 518
- 27.70 *Mail Retrieval And Mailbox Manipulation Protocols* 521
- 27.77 *The MIME Extension For Non-ASCII Data* 522
- 27.72 *MIME Multipart Messages* 523
- 27.73 *Summary* 524

**Chapter 28 Applications: World Wide Web (HTTP) 527**

- 28.7 *Introduction* 527
- 28.2 *ImportanceOfTheWeb* 527
- 28.3 *Architecturai Components* 528
- 28.4 *Uniform Resource Locators* 528
- 28.5 *An Example Document* 529
- 28.6 *Hypertext Transfer Protocol* 530

- 28.7 *HTTP GET Request* 530
- 28.8 *Error Messages* 531
- 28.9 *Persistent Connections And Lengths* 532
- 28.70 *Data Length And Program Output* 532
- 28.77 *Length Encoding And Headers* 533
- 28.72 *Negotiation* 534
- 28.73 *Conditional Requests* 535
- 28.74 *Support For Proxy Servers* 535
- 28.75 *Caching* 536
- 28.76 *Summary* 537

## **Chapter 29 Applications: Voice And Video Over IP (RTP)**

539

- 29.7 *Introduction* 539
- 29.2 *Audio Clips And Encoding Standards ..* 539'
- 29.3 *Audio And Video Transmission And Reproduction* 540
- 29.4 *Jitter And Playback Delay* 541
- 29.5 *Real-Time Transport Protocol (RTP)* 542
- 29.6 *Streams, Mixing, And Multicasting* 543
- 29.7 *RTP Encapsulation* 544
- 29.8 *RTP Control Protocol (RTCP)* 544
- 29.9 *RTCP Operation* 545
- 29.70 *IP Telephony And Signaling* 546
- 29.77 *Resource Reservation And Quality Of Service* 548
- 29.72 *QoS, Utilization, And Capacity* 549
- 29.73 *RSVP* 549
- 29.74 *COPS* 550
- 29.75 *Summary* 551

## **Chapter 30 Applications: Internet Management (SNMP)**

553

- 30.7 *Introduction* 553
- 30.2 *The Level Of Management Protocols* 553
- 30.3 *Architectural Model* 554
- 30.4 *Protocol Framework* 556
- 30.5 *Examples of MIB Variables* 557
- 30.6 *The Structure Of Management Information* 558
- 30.7 *Formal Definitions Using ASN.1* 559.
- 30.8 *Structure And Representation Of MIB Object Names* 559
- 30.9 *Simple Network Management Protocol* 564
- 30.70 *SNMP Message Format* 566
- 30.77 *Example Encoded SNMP Message* 569

- 30.72 *New Features In SNMPv3* 572
- 30.73 *Summary* 572

**Chapter 31 Summary Of Protocol Dependencies 575**

- 37.7 *Introduction* 575
- 37.2 *Protocol Dependencies* 575
- 37.3 *The Hourglass Model* 577
- 37.4 *Application Program Access* 578
- 37.5 *Summary* 579

**Chapter 32 Internet Security And Firewall Design (IPsec) 581**

- 32.7 *Introduction* 581
- 32.2 *Protecting Resources* 582
- 32.3 *Information Policy* 583
- 32.4 *Internet Security* 583
- 32.5 *IP Security (IPsec)* 584
- 32.6 *IPsec Authentication Header* 584
- 32.7 *Security Association* 585 . . .
- 32.8 *IPsec Encapsulating Security Payload* 586
- 32.9 *Authentication And Mutable Header Fields* 587 .
- 32.70 *IPsec Tunneling* 588
- 32.77 *Required Security Algorithms* 588
- 32.72 *Secure Sockets* 589
- 32.73 *Firewalls And Internet Access* 589
- 32.74 *Multiple Connections And Weakest Links* 589
- 32.75 *Firewall Implementation* 590
- 32.76 *Packet-Level Filters* 590
- 32.77 *Security And Packet Filter Specificatio'n* 591
- 32.78 *The Consequence Of Restricted Access For Clients* 592
- 32.79 *Proxy Access Through A Firewall* 592
- 32.20 *The Details Of Firewall Architecture* 593
- 32.27 *Stub Network* 594
- 32.22 *An Alternative Firewall Implementation* 595
- 32.23 *Monitoring And Logging* 596
- 32.24 *Summary* 596

<b>Chapter 33 The Future Of TCP/IP (IPv6)</b>	<b>599</b>
33.7 <i>Introduction</i>	599
33.2 <i>Why Change?</i>	600
33.3 <i>New Policies</i>	600
33.4 <i>Motivation For Changing IPv4</i>	600
33.5 <i>The Road To A New Version Of IP</i>	601
33.6 <i>The Name Of The Next IP</i>	602
33.7 <i>Features Of IPv6</i>	602
33.8 <i>General Form Of An IPv6 Datagram</i>	603
33.9 <i>IPv6 Base Header Format</i>	603
33.70 <i>IPv6 Extension Headers</i>	605
33.77 <i>Parsing An IPv6 Datagram</i>	606
33.72 <i>IPv6 Fragmentation And Reassembly</i>	607
33.73 <i>The Consequence Of End-To-End Fragmentation</i>	607
33.14 <i>IPv6 Source Routing</i>	608
33.75 <i>IPv6 Options</i>	609
33.76 <i>Size Of The IPv6 Address Space</i>	610
33.17 <i>IPv6 Colon Hexadecimal Notation</i>	610
33.78 <i>Three Basic IPv6 Address Types</i>	612
33.79 <i>The Duality Of Broadcast And Multicast</i>	612
33.20 <i>An Engineering Choice And Simulated Broadcast</i>	613
33.21 <i>Proposed IPv6 Address Space Assignment</i>	613
33.22 <i>Embedded IPv4 Addresses And Transition</i>	614
33.23 <i>Unspecified And Loopback Addresses</i>	616
33.24 <i>Unicast Address Hierarchy</i>	616
33.25 <i>Aggregatable Global Unicast Address Structure</i>	617
33.26 <i>Interface Identifiers</i>	618
33.27 <i>Additional Hierarchy</i>	619
33.28 <i>Local Addresses</i>	619
33.29 <i>Autoconfiguration And Renumbering</i>	620
33.30 <i>Summary</i>	620
<b>Appendix 1 A Guide To RFCs</b>	<b>623</b>
<b>Appendix 2 Glossary Of Internetworking Terms And Abbreviations</b>	<b>673</b>
<b>Bibliography</b>	<b>721</b>
<b>Index</b>	<b>729</b>
